

Big Things Have Little Beginnings [Rev. 20180619]

By J — Latest revision: http://allis.foundation/Big_Things_Have_Little_Beginnings.pdf

“What have you got to lose?” Such a question smacks of positivity despite its equally negative connotation. Such words get said when someone else feels there is little point in debating a plan of action further and a calculated risk needs to be taken. It's worth bearing that in mind now. You are being encouraged to take a risk and this ought not be done halfheartedly. There is something you need to undertake with gusto and enthusiasm. And you can trust you have nothing to lose. *1

ABOVE: PASTEL RENDERING BY J, DEPICTS SELF ON THE “BOUNDARY BETWEEN WORLDS,” LETTING GO OF THE BODY, ENGAGING LIGHT.

Kirlian Photography

Before you embark on this adventure suspend your intellectual left-brain activity for a moment. Let your-self wonder and feel the connectedness of all things.

Life is far more than we can know by peering through a microscope or reducing something into its smallest parts.

Just as we cannot know how the cell communicates with the rest of the organism by studying its chemical components, we cannot know the complex associations and mutual interactions of the human body by studying the tissues.

We cannot predict the behavior of a species by knowing its parts. To know something does not mean we understand it. The Kirlian effect cannot be understood simply by an application of the laws of physics as we know them. We need to consider how a complex, interactive biological system reacts when subjected to the Kirlian process and to do this means we have to go beyond what we think we know. Here it is necessary to suspend judgment so we can investigate further.

If you are interested in using electro photography on living systems you need to consider what a living system comprises of. Living organisms fall into a category known as 'open systems'.

Open systems are defined by their ability to actively engage in the exchange of material and information with their environment and to build up, assimilate and breakdown this material to maintain their integrity. An open system is actively engaged in the process of life. A stimulus applied to an open system is not a passive affair.

The open system will intelligently modify its reaction to the stimulus, unlike a closed system that is limited by the laws of physics. Basic physics is mainly concerned with studying closed systems.

In Kirlian electro-photography a mild electrical charge of a specific frequency and voltage with very low current (micro amps) is applied to the subject. The resulting Kirlian electrograph displays an interference pattern created through the interaction between the subject and the Kirlian signal. An electrograph of an individual in a calm and relaxed state will show a different flare pattern around the fingers and hands than an electrograph of an individual in a stressed and tense state.

This suggests that the state of the subject is somehow modifying the Kirlian radiation field. It appears that states of stress and relaxation modify the field flow and the Kirlian corona discharge makes this visible. Considering living organisms as open systems may help us to interpret the information received through the Kirlian process. Because the Kirlian process reflects changes in the state of the system its potential as a diagnostic tool becomes apparent.

Kirlian Photography is a process that uses pulsed high voltage frequencies & electron cascades to take pictures of usually invisible, radiating energy fields that surround us all. Due to the nature of the Kirlian process only the hands or feet are photographed and not the whole body.

Semyon Kirlian discovered this fascinating photographic phenomenon in the 1930s back in the U.S.S.R. While servicing a high voltage machine with his wife Valentiana, he was accidentally exposed to a harmless electron cascade. A visible aura was seen around his hands which he later captured on film. ^{*2}

Seeing the Aura

Some people can see the human aura. Some of us never have and some have on occasion but do not usually. First off it is not a really big deal if you do or don't see the aura. It really does not seem to have any bearing on a person's actual spiritual state in any case. Many people never see auras, feel energy, hear mystical information or have visions and many of these people can be just as good or better as healing practitioners and have as deep or deeper spiritual realization than people who do get the bells and whistles. Don't let this minor matter discourage you and if you do get the effects don't get all impressed with yourself either.

Most people when they do see an aura do not see much more than a misty outline and often dismiss that as optical illusion or heat waves. This is subtle energy so it is much more often quite light and ephemeral as the energy field is also pulsing and shifting constantly. The aura is not the optical reaction you see when you gaze at an object of one color for a long time then look away. It is not the spots you get in front of your eyes when you look at a bright light. Nor is it the optical flashes and such you might get from eye strain or migraine headaches. There are a multitude of theories and methods for seeing the aura most of them work some are easier than others to use.

Crystals can be programmed to assist you with seeing auras and receiving information. Though the first time I tried to program a crystal for this function I actually made it easier for other people to see my aura instead.

Most people try too hard. Relax and kind of unfocus your eyes and allow yourself to observe, if you don't see anything different than usual that's fine. When outdoors you might look along the tree line quite often the life force or aura of the trees and other plants is often visible as a kind of mist or faint glowing outline. Most exercises to see auras call for an area with indirect light kind of like that of a cloudy overcast day or early twilight. You also need a neutral or white plain background so it won't interfere with your observations. When you become familiar with seeing auras this won't be essential but at first it helps greatly.

You have probably already done one of the fastest ways to get a glimpse of your own aura which is to face a neutral colored wall in indirect light and to hold your index finger together at eye level move your fingers until you get the optical illusion of having a floating third finger in the centre. The little flare of color you may see at your finger tips is your aura.

You may be able to see your aura especially around your feet when you are in the bathtub if the light is soft, it's easier with a white tub. Practice seeing someone else's aura by having them sit near a solid light colored wall and just look without focusing especially around the neck and shoulders and head bright colored clothing will make this more difficult. Near sighted people have the advantage because if they remove glasses or contacts they might achieve the unfocused vision naturally.

These are all open eye methods and while many people use closed eye meditations it is best to get an idea of what you sense with your eyes open. With your eyes closed it may be more of a challenge to separate your own information and imagination from the received input.

Many people have commented that when seeing auras they only see the "heat waves" or misty whitish outlines and are disappointed with themselves because they are not seeing lots of color etc. I used to feel that way too I would occasionally see colors and or get symbolic imagery but most of the time with most people all I could see was the mist and waves. Many people find it easier to feel the energy of the aura. In the first place there are permission issues

many people are shielded by choice. Generally most of us will be able to see these things only with permission or compelling reason.

My personal experience is that and this is not true for everyone. Most of the time with most of the people what is there to see is the waves and misty outlines. with practice and by raising your frequency you might/will be able to see more from casual observation. Unless you have a particular need and or the specific permission of the subject and 'Your choice of Spiritual identifier here' or the person you are observing is feeling some relatively strong emotion or focusing intensely or in effective meditation etc.

Most auras tend to be fairly quiet you will see colors among the passionate, the impassioned, the angry, the seriously ill, the dedicated intellectual, the saint or sage, the happy pregnant woman, young children at play, etc. When people are in seriously impaired health with the potential to die they may see much more of the auric field of others. In that case often when their health improves or they decide to stay on Earth this heightened sensitivity may disappear. You also need yourself to be in a calm and detached but positive accepting mild anticipatory state not wrapped up in emotions or preconceptions that will effect, impede, or superimpose you own energies on the observed. People who see all layers of the aura with ease right off have probably spent lifetimes learning to do so and more importantly have learned to perceive without the blocks and restraints most of us have imposed on ourselves that restrict our awareness of our deeper vision and perceptions. We can release those blocks should we have the will and cause to do so.

Auras are not like neon lights very often these are mostly subtle effects and the emotional and mental layers may change constantly so we are talking about fleeting shifting subtle patterns of light and color which are most often intermingled with other auric and energetic patterns and which are rarely isolated against a neutral background in soft light which is the best condition for observation. the Aura is not to be confused with the optical effect of staring into light bulbs etc. Soft light or twilight conditions are often best for aura observation. The restraint and repression that has been prevalent in today's society also has caused a holding in and dampening of the auras light.

The degree of visibility and activity of the observable aura does vary to a degree according to the cultural and social traditions of the observed person. Many Chi gong Masters and Buddhist Adepts for example may keep their aura pulled in tight to the physical body a lot of the time. Failing to see their aura does not mean that they or you are not skilled or spiritual.

You also need to become familiar with your own energy body. The more you know about your own energy the easier it will become to understand others energy. You need to be neutral there is a not striving but allowing state of being that assists and enhances many of the psy sensitivities. There are also pitfalls in rigidly adhering to some formula of interpretation of the human aura. Your intuition untainted by your own prejudices is vital here . Some of the older interpretive guides are for example inclined to ignore or discount positive qualities of red. Some past interpreters have given a more positive assessment of the quality of unquestioned obedience to authority then we are inclined to accept today.

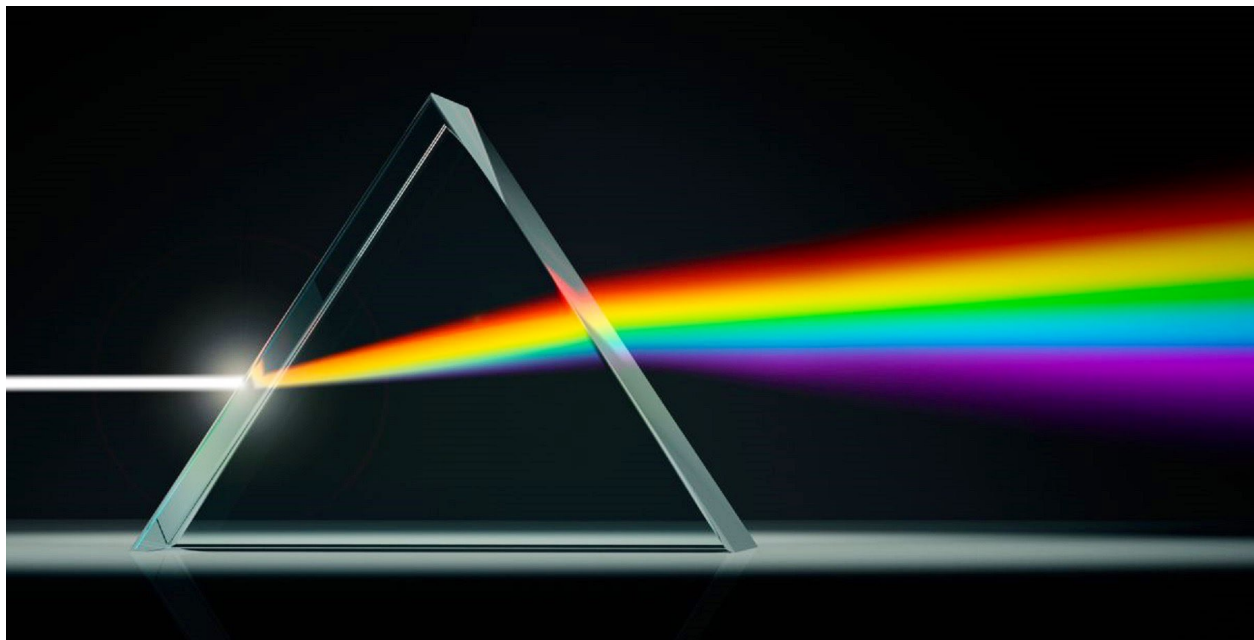

What you may be interpreting. What you may perceive as you observe the aura and the information and colors in the aura. First of all the layers are not really layers like an onion has but areas of different frequency or wave pattern that interpenetrate each other. There are many more than the seven to twelve most people describe though for practical purposes that is enough to provide a general understanding of aura functions.

Generally what most people see when they observe an aura is some of the information from the first or etheric body visible next to the skin. This is mostly a bluish or greyish or whitish field. Weak spots and trauma may show as thinning or swelling in the aura or breaks leaks spurts of energy around the etheric outline of the body. They may also see information from the second or emotional body which is often seen as clouds or patterns of multi colored light. traumas and injuries in this layer may show up as muddy or loud colors grey fogs black spots and sometimes shapes and symbols are seen in this energy field. Information and damage can be compressed and layered. Even when you do see or sense the aura you will not get all the information.

Barbara Brennan in her book 'Hands Of Light' describes the different energy bodies as alternating between structured form like the blue grid some see on the etheric (with physical related information) and the colored clouds of the emotional body. The following part was taken down by me as though it were dictated to me (and could probably be considered as channelled.)

Your feelings thoughts and actions, your mission, pathway and dreams are all imprinted upon your aura from moment to moment and through the eternity. While a reader may see your own pattern, the perceiver and reader may also have their own code. The way they receive and interpret what they see may not be what is there, but may be a code of information for them filtered through their auric perception.

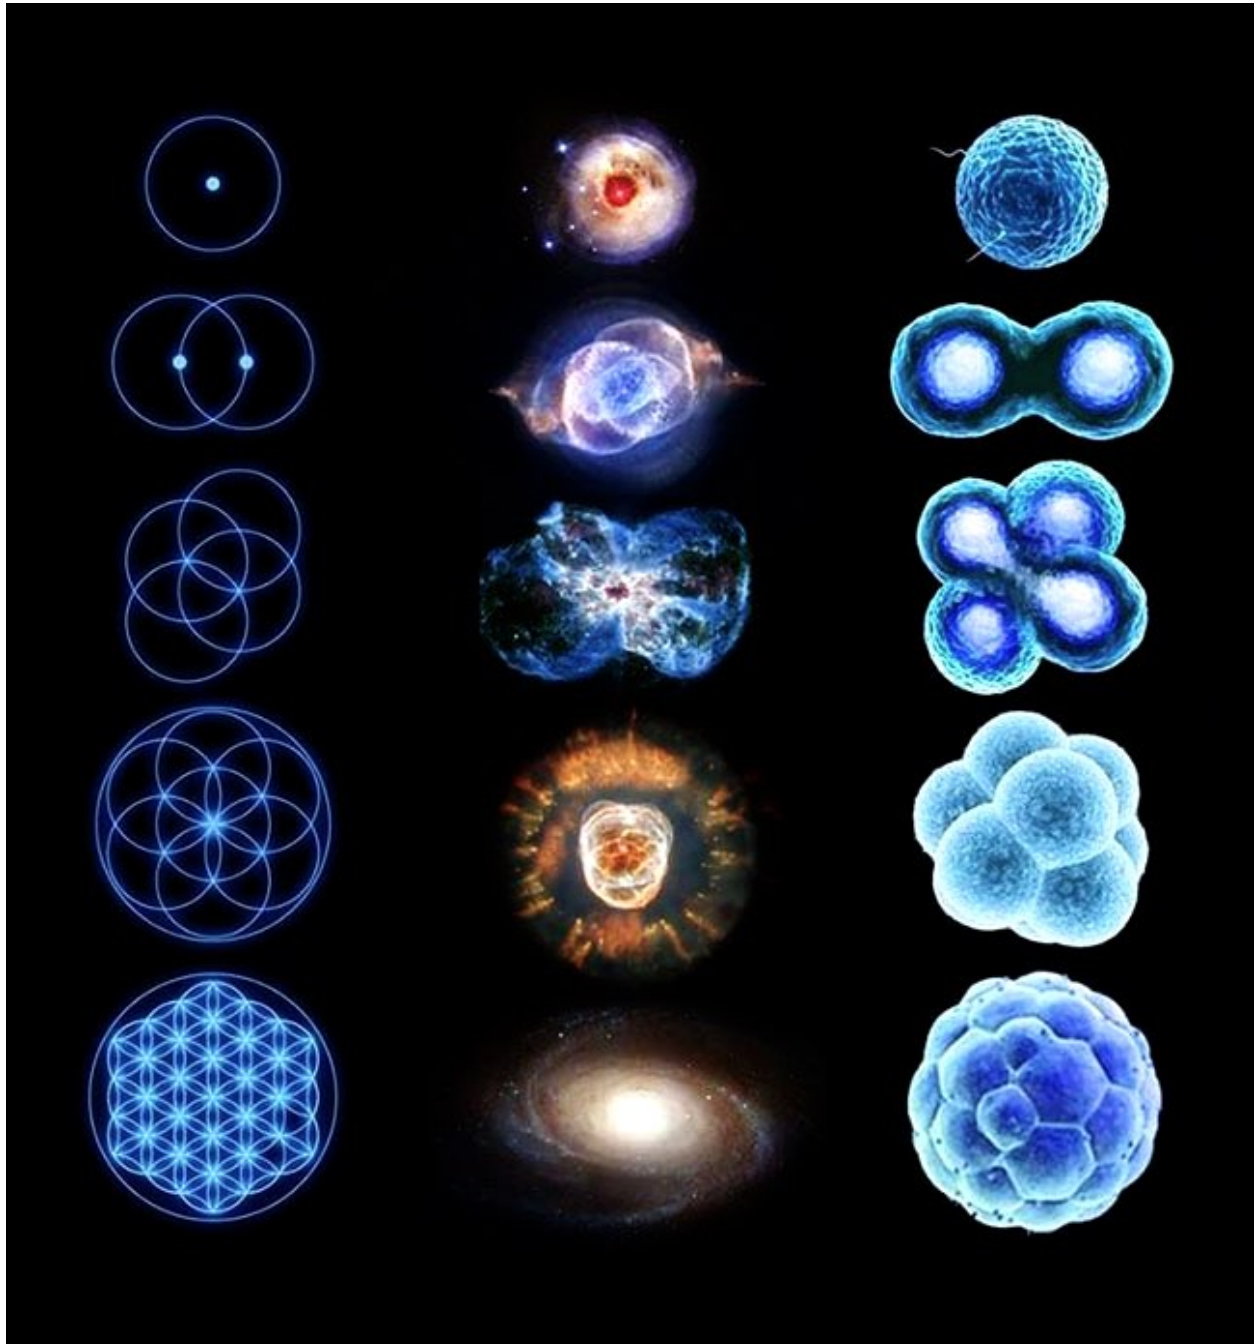

All your feelings, thought, acts and the actions taken upon you do impact upon your aura. Not everything is preordained, the passions and fears and restrictions and freedoms your past and possible futures are all held with in these currents. Generally many born at the same time may have the same basic tone on a soul level which is where expressions such as indigo children arise, but we are each separate beings so one of indigo soul tone for time may be pink or yellow or blue in personal color brought into the incarnation yet have different color visibly predominating from the experiences and action reaction of the life and life plan that they are moving through as well as showing the paths and flares of the colors of the momentary influences, both internal and external in the physical environment and from the spiritual creative plane being flow form and isness. Which is what is simply called God by many. and from all the emanations thereof. *3

What is Consciousness?

An Open Letter To The World Of Science

Gentlemen:

This Open Letter to the World of Science, accompanied by a Treatise on The Russell Cosmogony, is being sent to approximately 350 members of our National Academy of Science and Royal Society of London. 100 Universities, and 300 leading newspapers.

This announcement with its new concept of Light, Matter, Energy. Electricity and Magnetism is a simple yet complete, consistent and workable cosmogony which will enable future scientists to visualize the universe as ONE WHOLE, and will open the door to the New Age of Transmutation.

Recalling the important contributions I have already made to science. such as my work in completing the hydrogen octave and my prior discovery of the existence of the two Atom bomb elements given to the scientific world in my two Periodic Tables of the Elements, assures me that you will give serious thought and attention to these documents.

Present threatening world conditions make it imperative that science discloses the way whereby the weakest of nations can protect itself from the strongest of them and render attack by land, sea and air *impotent*.

This new knowledge will give science this power.

England could have been rendered immune from her devastating bombardment had the world been receptive to these new scientific discoveries which I endeavored to give to it when World War II started. Science, however, did make use of the two atom bomb elements mentioned above, which I charted and copyrighted in 1926.

The world needs new metals. Many new rustless metals of greater density, malleability and conductivity await division in vast quantities from carbon and silicon. *These will be found when science discards its concept of matter as being substance, and becomes aware of the gyroscopic control of motion which will split the carbon tone into isotopes as a musical tone is split into sharps and flats.*

In the chemical elements, the sharps and flats are isotopes. These can be produced by man in greater numbers than Nature has produced them, for Nature does not begin to split her tones until she has passed two octaves beyond carbon. *There is a tremendous opportunity for the metallurgist of tomorrow to create new metals in the carbon and silicon octaves.*

Of even greater importance to the world in this crucial period is the production of unlimited quantities of free hydrogen. *This ideal weightless fuel could be transmuted from the atmosphere while in transit without the necessity of storage capacity.*

These are the important things which might now be known if Kepler's discovery had divulged the facts of geometric symmetry and dual curvature within the wave field.

His law of elliptical orbits evidences that he was on the verge of discovering that four—not two—magnetic poles control the dual opposed balance of this two-way universe. With but two magnetic poles a three-dimensional radial universe of time intervals and sequences would be impossible. A balanced universe must

have two poles to control centripetal, generoactive force, and two compensating poles to control centrifugal, radioactive force.

By means of such knowledge, science could rid the earth of fear of attack by any nation no matter how the attack might come, whether by land, sea or air.

This new knowledge will give to science the **cause** of all the **effects** which have for centuries of research deceived the senses of scientific observers.

Man has a **Mind** as well as having senses, but he has given preference to the evidence of his senses in the building of his cosmogony. Man can **reason** with his senses hut he cannot **know** with them. Reasoning is sense-thinking—not Mind-knowing. He has also produced **effects** without knowing their **cause**.

The senses have not revealed to man that this is a *substanceless universe of motion only*. Neither have they told him the principle of polarity which divides the universal equilibrium into pairs of oppositely-conditioned mates to create a sex-divided electric two-way universe.

The time has come in the history of man when **knowledge** alone can save the human race. Man has for too long left he Creator out of His Creation, thinking He cannot be proven in the laboratory.

God not only can be proven in the laboratory, but because of the facts of that proof man can solve many heretofore hidden mysteries of the universe—such as that of the seed and growth—life and death cycles—the purpose of the inert gases as electric recorders of all repetitive effects—and the true process of atomic structure.

You might reasonably ask why I have withheld this knowledge for so many years. I have not withheld it. I tried in vain to give it from 1926 when I first published charts of the complete periodic tables herewith attached, up to the beginning of World War II when I tried to organize a laboratory group to save England from its unnecessary bombardment.

I also accepted and held the Presidency of *The Society of Arts and Sciences* in New York for seven years for the sole purpose of giving to the world this new cosmogony based upon a two-way continuous, balanced universe to replace the one-way discontinuous, unbalanced universe which is presumably expanding to a heat death.

During this period, I lectured upon the misconceived idea that hydrogen is the basic number one atom of the periodic table. I explained that there are twenty-one other elements which precede it and that hydrogen itself is not a single element but a whole complex octave. I also explained the impossibility of there being any element without an inert gas as its source. At that time I distributed my periodic charts to approximately 800 scientists and universities.

Further than inciting research which yielded so-called isotopes of hydrogen and heavy water, nothing came of my effort, nor did I receive the credit due me. Incidentally, those so-called isotopes are not isotopes but full-toned elements of an orderly octave group series. Isotopes do not occur in Nature until they reach the octave following the silicon octave. The reasons for this are fully explained in our Study Course.

I wrote two books, gave many lectures and set up a demonstration laboratory in a university to prove that the elements are not different substances but are differently-conditioned pressures of motion—and that the structure of the atom is based upon the gyroscopic principle.

As one after another of my discoveries appeared under other names, I acted on the advice of a friendly science editor to withhold any more of my new cosmogony until it was fully completed in words and diagrams, and again copyrighted.

It has taken many years to so complete it that it is invulnerable to attack, but this has now been done, and this present treatise is as complete in brief as the whole cosmogony is complete in detail.

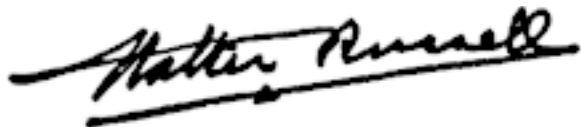

I do not look for immediate acceptance of this revolutionary new knowledge. I do hope and expect, however, that the seed of it will grow within the consciousness of science, and as I am nearing 82 years of age I feel it incumbent to announce the fact to science through this open letter and treatise that The Russell Cosmogony, which my gifted wife, Lao, and I have together written into a year's Study Course of 935 uncontradictable pages, and 182 diagrams, is now complete.

This course is now being studied all over the world and, through our students as seed, this new knowledge will ultimately transform the world.

It is with the deep desire that a higher civilization shall arise that I send forth this message to mankind. The day is **here** when Science and Religion must marry, or through ignorance of God's Universal Laws man will perish from the earth.

Hoping that the world of science will recognize that this treatise has within it the answer to basic **cause** for which it has been so long and tirelessly searching, I am

Sincerely yours,

A handwritten signature in black ink that reads "Walter Russell". The signature is fluid and cursive, with a long horizontal line extending from the end of the name.

Compression ^{*8}

DNA SQUEEZES biological magnetism
Thru the speed of light into GRAVITY WELLS..
Fabricating Gravity.. As the geometer of consciousness it's
Symmetry inserts the embedding which keeps little tornadoes
Nested inside bigger ones...

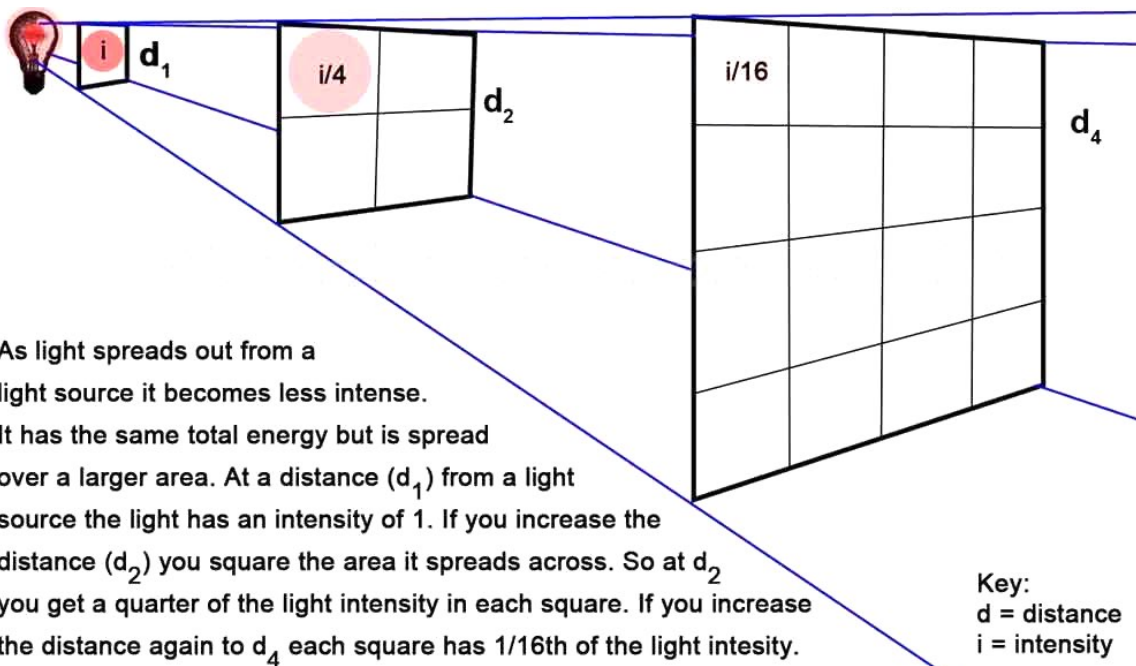

Thus consciousness as embedding
(self-reference) maintained
Becomes the physics of the GLUE
Which holds fields together.

*Science shows..
Love is the GLUE
That Holds things Together*

Infinite Non-Destructive Compression - because of recursive adding and
Multiplying of wavelength AND velocity - PRODUCES the acceleration
Einstein knew is identical to gravity.

Light Intensity ^{*9}

Metal

According to the theory of a universe of motion, the neutral condition is motion at unit speed, and the motions of the universe as a whole are symmetrical around this level, the true speed magnitude in each case being the deviation from unity. As a result of the space-time symmetry, the effect of any motion in time is the inverse of the effect of the corresponding motion in space. The particular motion with which we are concerned at the moment is the motion imparted to the products of the explosion of a star: a supernova. Some of the products of such an explosion are ejected at speeds less than that of light, and they take the form of a cloud of particles moving outward in space from the site of the explosion, but remaining in the original location (the moving location indicated by a clock) in time. Another portion of the explosion products is accelerated to speeds greater than that of light. These products take the form of a cloud of particles expanding into three-dimensional time, but remaining in the original location in space. This cloud of particles is the white dwarf star.

As I have shown in my publications, a development of the details of the properties and the evolutionary course of the white dwarfs on this theoretical basis leads to results that are in full accord with the observations. For present purposes, however, we are concerned only with the density relations. The expansion of the (relatively) slow-moving explosion products into space results in a large *decrease* in the density of the expanding aggregate. Because of the reciprocal relation between space and time, the expansion of the fast-moving product into time results in a large *increase* in the density of this aggregate. The white dwarf star is therefore an object of abnormally high density, compared to a normal star. Furthermore, the density gradient is the inverse of that which prevails in the normal stars; that is, the center of the white dwarf is the region of greatest compression in time (equivalent to expansion in space), and it is therefore the region of minimum density.

This picture of the white dwarf derived from the theory of a universe of motion is, of course, quite different from the currently popular view, and it is possible that many individuals will find it little short of outrageous. But the reason for writing this article is that in the course of my review of the progress in the white dwarf field that has taken place in recent years, it became evident that some of the information about these objects that is now available supplies a *positive confirmation* of the upside down nature of the white dwarf structure.

As pointed out by James Liebert in a review article in the 1980 *Annual Review of Astronomy and Astrophysics*, it is generally conceded that the apparently normal matter in the outside layers (atmosphere) of the white dwarf stars must have been accreted from the environment. (The development of the theory of a universe of motion arrives at this same conclusion.) This matter, then, is mainly a mixture of hydrogen and helium, with hydrogen as the major constituent. If conventional theory is correct, the heavier element, helium, will preferentially move downward, leaving the outer layers of the star enriched in hydrogen. On the other hand, if the inverse density gradient required by the theory of a universe of motion actually exists, the hydrogen will preferentially move downward, and the outer layers will be enriched in helium. The verdict from observation is unequivocally in favor of the universe of motion. Liebert reports that the "cooler helium-rich stars" are "the most numerous kind of white dwarf," and that some have almost pure helium atmospheres. "The existence of nearly pure helium atmosphere degenerates over a wide range of temperatures has long been a puzzle," he says. But it need not continue to be a puzzle. The helium accumulates in the outer layers because these are the regions of greatest density in the white dwarf.

This theoretical conclusion, strange as it may seem in the light of current thought, is further confirmed by an examination of the behavior of the elements heavier than helium, commonly lumped together as "metals" in discussions of stellar composition. The metals, too, should preferentially accumulate in the regions of greatest

density: the center of the star, according to current astronomical theory; the outer layers, according to the theory of a universe of motion. Liebert describes the observed situation in this manner:

The metals in the accreted material should diffuse downward, while hydrogen should remain in the convection layer. Thus, the predicted metals-to-hydrogen ratio would be *at or below solar* (interstellar) values, yet real DF-DG-DK stars have calcium-to-hydrogen abundance ratios ranging from about solar to well above solar.

Here again, as in the helium distribution, the verdict is unequivocal. The larger concentration of the heavier elements in the outer regions definitely identifies these as the regions of greatest density, a result that is inexplicable on the basis of conventional theory, but is specifically required by the theory of a universe of motion. Liebert admits that no plausible explanation on the basis of current astronomical theory is known. The only suggestion that he mentions is that the accretion of hydrogen must be blocked by some kind of a mechanism, a far-fetched idea without the least support from observation.

When it is viewed in conjunction with the gradual decrease in component speeds that takes place as energy is lost to the environment, the inverse density relation also supplies an explanation of the occurrence of novae. The continued energy losses eventually result in the speeds of some of the constituent particles dropping below the unit level, and into the region of motion in space. These particles then occupy more space because of their spatial speed, and they form “bubbles” that move to the region of least density, the center of the star. Accumulation of this material with high spatial speeds builds up a gas pressure. Eventually the pressure reaches a level at which it breaks through the overlying matter, resulting in a flare-up of the star, as the hot material from the interior is exposed briefly. The outburst relieves the internal pressure, the star resumes its normal condition, and a new pressure build-up begins.

The explanation of the origin, the extreme density, the novae, and other properties of the white dwarfs that I derived originally by deduction from the properties of space and time as they exist in a universe composed entirely of motion requires some significant conceptual reorientation, and most astronomers have been reluctant to entertain the possibility that current ideas may have to be altered to such an extent. However, more and more of those who examine the existing problems carefully are recognizing that *something* will have to undergo a drastic change, and are assessing the situation in a manner similar to the following from Martin Harwit:

The fundamental nature of astrophysical discoveries being made—or remaining to be made—leaves little room for doubt but that a large part of current theory will have to be drastically revised over the next decades. Much of what is known today must be regarded as tentative and all parts of the field have to be viewed with healthy skepticism.

The big problem, of course, is to determine just *what* has to be changed, and what has to be put in its place. The inverse density gradient that we find in the white dwarfs now identifies one of the requirements that must be met by the “drastically revised” theory. It must provide a new explanation of the white dwarf structure that incorporates this upside down density relation. Perhaps there are alternative ways in which this requirement can be met, but it seems rather obvious that the first step in exploring the situation ought to be to take a good look at the theory already in existence that *anticipated* this requirement. *¹⁰

The physically strong are more likely to want limited government, while the weak support governmental intervention into most aspects of their lives. And since there have always been far more weak than strong, socialism has always closely followed on the worn and bloody heels of civilization—a civilization ironically developed by the physically and mentally strong and then lost to the more numerous weak. *¹¹

Religious Warfare

There has never been any peace. There have been only two periods in history: the period we know as war, and the period we call peace, which is a cover up—in reality it should be called preparation for another war. The whole history consists only of two things: war and preparation for war. And you are asking me, "Since peace was officially restored to the world at the end of World War Two, what have the politicians been doing?"

The politicians have been doing exactly what they have always been doing: creating more conflict, more unrest, more discrimination, more destructive weapons—and preparing for the third world war.

Once, Albert Einstein was asked: "You, being the scientist who discovered atomic energy, must be able to inform us what is going to happen in the third world war."

Einstein had tears in his eyes and he said, "Don't ask me about the third world war—I do not know anything about it. But if you want to know about the fourth world war, I can say something."

The journalist who was asking the question was immensely surprised and amazed: The man is not saying anything about the third world war, says he knows nothing about it, but he is ready to say something about the fourth world war? He asked excitedly, "Then please tell me about the fourth world war."

Einstein said, "Only one thing can be said about it—that it is never going to happen." The third world war will be the last world war. For this last world war, politicians have been preparing since peace was officially restored after the second world war.

The politician and his game are the ugliest things you can conceive of. We are facing a dark night, and I am reminded of the old saying that "When the night is darkest, the dawn is very close by." But I hesitate to say that this dark night that is surrounding us will have any dawn to it.

I will just tell you exactly what has been happening since 1945—and people are kept in absolute ignorance; they are not aware that they are sitting on a volcano which can erupt any moment. They are kept engaged in trivia, and the real problems are kept hidden as if they don't exist.

Since 1945 there have been one hundred and five wars fought in sixty-six countries—all of them in the Third World. One is necessarily tempted to ask, "Why in the Third World?" America and the Soviet Union both have gone so far ahead in developing destructive weapons, that the weapons used in the second world war are out of date. For them, they are of no use. They have to be sold somewhere; some market is needed, and the market is possible only if there is war.

America goes on giving weapons to Pakistan. Then, naturally, India goes on taking weapons from the Soviet Union. And this has been happening in the Third World: one country purchases out-of-date material from the Soviet Union; then its enemy purchases from America. This is good business.

And they don't want these people to stop wars, because otherwise, where are they going to sell these weapons on which they have spent billions of dollars? And these poor countries and their politicians are ready to purchase them, although their people are dying of hunger—seventy-five percent of their budget goes towards war.

On the average, each war has lasted three and a half years. So who says peace has been restored? One hundred and five wars in sixty-six countries, each war lasting at least three and a half years—and you call it peace?

These wars caused sixteen million deaths. In the second world war, there were also millions of deaths. Since the second world war, which is the time of peace, sixteen million people have been killed in wars—and still you go on calling it peace?

But the politicians are so cunning, and people are so blind that they will not look around at what is happening. They will go on fighting about small things: which district should remain in which state? Belgaum is a district here; should it remain in Maharashtra?—because it is a boundary district between the states of Karnataka and Maharashtra.

There are people belonging to both languages, and they have been killing each other continually for three decades—and just a small thing cannot be decided.

In fact, nobody wants to decide it. Otherwise, what is the problem? Just a small plebiscite, a vote under neutral observation, and people can decide where they want to be. There is no need for killing each other. But it seems politicians are deeply interested in trouble continuing somewhere or other, so that they are needed.

Sixteen million people have been killed, and yet in every school and every college and in every university, they go on repeating, "We are living in a period of peace." In fact, the world war was almost more peaceful!

The majority of the wars have been in Asia. It is one of the strategies of the powerful nations and their politicians that they should fight always in some other country; the Soviet Union and America should fight in Afghanistan.

So the people of Afghanistan are killed; Afghanistan becomes a graveyard, and America and the Soviet Union are both profited by selling weapons. They are sending their experts, their weapons; they are training the Afghans, and Afghans are killing other Afghans. One side has weapons from America, the other side has weapons from the Soviet Union.

Nine million civilians have been killed in conventional wars since Hiroshima. In ancient times, civilians were never killed. It is absolutely absurd: if your armies are fighting, the people who are fighting in armies may be killed, but now there seems to be no sensibility, no reasonability—nine million people who are civilians are killed. There may be small children, women, old people—who have nothing to do with the war, who may be reading in their schools, who may be working in their factories, or who may be cooking in their kitchens.

Just a few days ago Ronald Reagan, for no reason at all, attacked Libya—he bombed the civilian parts of Libya. His target was Kaddafi, and because Kaddafi has three houses inside the city, all his three houses had to be bombed. And in bombing his houses, other houses were burned and bombed. And just now, investigators have come to know that while the bombing was going on, professional killers were searching inside Libya for Kaddafi because it was possible he might not be killed by the bombs, he might not be in his own house.

So they were bombing the civilians, and professional killers were searching inside Libya to find Kaddafi. They could only kill Kaddafi's daughter. And neither Kaddafi nor the Libyans have done anything wrong against them.

And it is a coincidence that the day England allowed Ronald Reagan to use England as a base for bombing Libya, the parliament of England did not allow me to stay at the airport, in the lounge, for six hours—because I am a dangerous man! And Ronald Reagan is allowed to use England to bomb an innocent country which has done no harm to him. This is as dark a night as humanity has ever faced.

The current war budget is around seven hundred billion dollars per year. Every year, fifteen million people die from malnutrition and disease, and every year seven hundred billion dollars are spent on warfare.

Every minute, thirty children die for want of food and inexpensive vaccines and every minute one point three million dollars of public funds are spent on the world's military budget.

It seems we are not interested in life anymore; we have decided to commit suicide. Man has never been in such a suicidal mood—ever, in the whole of history.

Two hundred and fifty million children have not received even a basic education. A single nuclear submarine equals the annual education budget for one hundred and sixty million school-age children in twenty-three developing

countries. Just one submarine! And there are thousands of submarines moving around the ocean all over the world—American and Russian both—and each submarine has nuclear weapons six times more powerful than all the weapons that were used in the second world war. And they are so costly that we could have provided our children with education and food, nutrition. But our interests are not there.

These are the politicians who don't want to be interfered with, who want absolute control of humanity—nobody above them.

The world's forests are disappearing at the rate of eighteen to twenty million hectares a year—an area half the size of California, and California is one of the biggest states in America. Within the next twenty to thirty years, all the tropical forests will be gone; and the implications are tremendous because these forests are supplying you with oxygen and life. If these forests disappear at the rate they are disappearing, mankind will be at a loss to find enough oxygen—from where?

And on the other hand, whatever carbon dioxide you exhale, these forests inhale. If these forests were not there... already there is a very thick layer of carbon dioxide continuously accumulating in the sky, just on the twenty-mile boundary where the atmosphere ends. And because of that carbon dioxide, the temperature of the atmosphere is rising. It is already four degrees higher than it has ever been.

If all the forests disappear, the temperature will become so high that it will do two things: firstly, it will become impossible for life to survive; secondly, all the ice at the north and the south poles, on the Himalayas and the Alps and other mountains, will start melting because of the heat. And this will raise all the oceans by forty feet. It will flood all our cities, all our countries; it will drown almost the whole earth—and this is not a flood that is going to recede.

But these politicians go on doing it. Just a few months ago I was in Nepal. Nepal is the poorest country in the world, but rather than dropping its arrangements for war, it has sold its forests—eternal forests of the Himalayas—to the Soviet Union. And the Soviet Union has cut whole mountainsides and left them dry. And for what? To create more newspapers.

What is the need of so many newspapers? It is almost the same news every day, and now that we have got far better media systems, the newspaper is out of date—there is radio, there is television. Why do you go on clinging to newspapers and destroying all the forests? Just because all the politicians, presidents and prime ministers need their pictures on the front page; their speeches, which are simply bullshit, to be published—without any consideration of what harm they are doing.

During the same period, the world population is expected to increase thirty to forty percent, from five billion to seven billion. This population growth alone will cause requirements for water to double in nearly half the world. Food is another thing... even water will become difficult, because the requirement will be double and we don't have that much water for drinking.

In addition, the United Nations reports say that globally, twenty million hectares a year of farm and grazing land are being reduced to zero productivity. More than one thousand plant and animal species become extinct each year—a rate that is expected to increase. One and a half to two million people in developing countries suffer acute pesticide poisoning annually, and pesticide-related deaths are estimated at ten thousand per year. Officers of India's planning commission reported recently: "We in India are on the verge of an enormous ecological disaster, with our water reserves drying up. What is happening in Africa is going to happen in India within a few decades."

Your population goes on growing, your land goes on becoming more barren, your water supply is becoming less and less, and because forests have been cut, the rivers that go through Nepal to Bangladesh are creating, every year, such floods as have never been seen before. Thousands of people are dying, thousands of villages simply disappear—because those thick trees were making the rivers flow slowly. Now that there are no trees, the rivers come with such force that the ocean is not ready to absorb that much water so quickly. The water starts returning and that returning water creates the floods that happen in Bangladesh.

Neither Indian politicians nor Nepalese politicians are ready to stop cutting the trees. Nobody is interested in human life. Nobody is interested in finding out what our priority should be.

A poor country like India has so many newspapers, so many magazines, which are absolutely unnecessary. And that newsprint paper does not grow in the fields, does not fall from the sky; you have to cut trees. Trees that have taken one hundred fifty years, two hundred years to grow, disappear. And what do you gain from your newspapers? Politicians are the real criminals—not the criminals who are in your jails. It would be a far better world if there was an exchange: all the politicians in the jails, and all the criminals in the politician's positions—they would prove more human.

The politicians go on hiding facts as long as possible, as if by hiding facts you can change anything.

Now many countries are not declaring how many homosexuals they have. Families are not declaring that the person who has died, has died from AIDS. They are bribing doctors to get certificates that he has died of a heart attack, or of cancer—because the family is more worried about its respectability, about what people will think: "Somebody has died of AIDS in your family?"

But hiding the fact means... that man had a wife; he may have transferred the disease to the wife and if there are children, they may be born with the disease—and nobody will know it and they will go on spreading it all around.

The disease is not an ordinary sexual disease—anything that comes out of your body, even your tears, carries the virus. If a child is crying, and just out of kindness and compassion you wipe the tears of the child, there is a danger you may be getting AIDS. Saliva carries the virus, and the whole of humanity is being kept in darkness: kissing should be stopped now—completely!

There is only one small part of humanity—the people who live in Siberia, the Eskimos—they are the only people in the whole of history who have never kissed. And when for the first time they saw Christian missionaries kissing, they could not believe it: "How dirty these people are, mixing saliva with each other! Are they human beings or some kind of monsters?"

Their way is far more scientific and far more hygienic. They don't kiss just to show love—because it can be not love, but death—they rub noses with each other; that looks very clean, unless you have a cold.

The other day it was accepted that ten million people are suffering from AIDS right now; and this is not a definitive report because countries like India have no way of knowing—nor the means to know. Only very developed countries have come to know that ten million people are suffering.... Perhaps at least one hundred million people are suffering in all these backward countries.

For example, in Africa, AIDS is more prevalent than anywhere else. And it was never made known that Africans are not homosexuals, but they have a strange perversion: they make love to women, but not from the front.

There are people around the world, in small villages, who even make love to animals—and they have given AIDS to animals! And now animals are spreading that AIDS through their milk, through their meat. Things have gone beyond human control.

No doctor wants... even if he comes to know that his patient has AIDS, he does not want to tell the patient because then the patient will insist, "Treat me!" There is no treatment. So the doctor tries, "You have some other disease," and sends him to some other expert because being in contact with the AIDS patient the doctor is in danger, the nurses are in danger. The whole staff is in danger.

In one of the reports I saw about jails... thirty percent of the people in jails are homosexuals. And that does not seem to be an accurate report. It must be the minimum that jail authorities have accepted—because people who are living in jails for twenty years, thirty years, and cannot come in contact with women, are bound to force homosexuality on each other.

The simplest thing would be.... There are separate jails for women—why should they be separate? The prisoners should live in a mixed way, with women and men together, and then AIDS and homosexuality can be avoided. But politicians will not say anything about it, simply because of fear. Their whole object is to say only things which people like, only things which don't go against people's prejudices, their traditional mind—because they depend on people's votes.

That's why I said that religious people should always be consulted by the politicians; their advice should be given every possible attention. But Rajiv Gandhi says that politicians should not be interfered with by religious people. Religious people can be interfered with by politicians—about that, there is no question. This is an unfortunate thing, but it goes on and on, and time is very short.

I used to be very hopeful. Still, I go on hoping against hope that perhaps, in a very dangerous situation, man may awaken. But there seems to be a sadness in my heart because I can see that if nothing is done, then this century is going to be our end. And not only our end, but the end of the whole of existence's dream of creating consciousness. It has been successful only on this planet. There are millions of stars and each star has dozens of planets; only on this small planet has the miracle happened that not only life exists—consciousness exists; not only consciousness exists, but there are people who have reached to the ultimate peak of consciousness: a Gautam Buddha, a Socrates, a Pythagoras, a Chuang Tzu.

Life disappearing from this small planet will make the whole universe so poor that it will take millions of years to come again to this state where consciousness can become enlightened.

My sadness is not about myself. I am absolutely contented. Death cannot take anything from me. My sadness is concerned with the whole of humanity, because their death will take away any opportunity of their becoming enlightened, of their becoming blissful, of their knowing meaning and significance. They have lived in darkness. Are they going to die in darkness too?

I would like my people, at least, not to waste time in postponing their own growth, because politicians are absolutely prepared to destroy each other—to destroy all and everything...^{*13}

The Wave

To know the wave is to know the secret of creation.

The wave is nature's method of transferring the dimensionless concept of form in inertia to dimensional form in mass in motion by an impact of the energy of the concept against the inertial plane.

All waves are the expression of force, a record of the universal constant or its multiples in accumulated energy.

The dimensions of any wave are the dimensions of the multiples, in universal ratios, of the energy constant represented by that wave.

Waves are not undulations such as those produced by the shaking of a rope up and down. They are actions and reactions beginning at and growing from harmonic points of impact upon the inertial plane of the wave.

Nor are waves continuations of motion beginning at one source and transferred in sequence.

Waves are simultaneously generated from inertia at intervals which are sequential, and in dimensions which are opposed and sequential.

Sequential intervals of the expression of force in motion are simultaneously recorded on the inertial planes of equilibrium of each consecutive octave of motion.

Within each consecutive octave every expression of motion is sequentially produced and reproduced in every atom of every element until it is finally recorded in the inertial planes.

All of the energy of the universal constant is existent in inertia and all of its variations in accumulation are stored in the sequential inertial planes of equilibrium which have their chemical representation in the inert gases, from which they borrow their appearance of existence of mass in motion.

The inert gases are the storehouses of all of the states of motion contained within the mass of the wave.

The purpose of the wave is to transfer states of motion from one potential to another. This is nature's method of accumulating the energy constant from low potential to high potential, octave by octave, in a series of progressive steps until maximum motion has been reached. Every state of motion is the result of a concept of that state.

The purpose of motion is to contract concept into form and then to expand it into the memory of form.

All concepts are but recollections of eternal ideas. All forms are but the regenerated memories of universal Mind.

Each action of motion is recorded by a reaction in the master-tone inert gas of each octave.

Any expression of motion whether of gravitation or radiation, or whether the tossing of a marble or the revolving of a planet, is simultaneously recorded by impact against the inertial plane of every octave of recorded motion in the universe of dimension, and from there produced and reproduced sequentially in waves of mass in motion.

The sequences of a wave are tonal and its tonal intervals have an appearance of existence in masses of relative dimensions.

Let us repeat the definition of a wave: "The wave is nature's method of transferring the dimensionless concept of form in inertia to dimensional form in mass in motion by an impact of the energy of the concept against the inertial plane."

All motion appears in mass and disappears in plane.

This is the process of evolution and devolution in its utmost simplicity.

The appearance of motion in mass is by way of the positive tones of the wave and its disappearance into plane is by way of the negative tones of the wave.

An impact of a stone upon the surface of the water transfers both its positive, gravitative actions and its negative, radiative reactions simultaneously upon the entire surface of the water.

Near the point of impact small harmonic circles become the contracted bases of opposing cones of high altitudes.

Near the point of impact short high waves of power-time dimension simultaneously pile themselves up in sequential stages.

Ten miles or a thousand miles away harmonic circles of increasingly larger bases, which become the expanded bases of cones of low altitudes, are simultaneously marked off on the inertial plane of the water's surface.

These are the expanding radiative cones of lessening generative energy which are dissipating the energy of the impact into its equivalent in speed.

These opposing forces simultaneously proceed in opposite directions from the harmonic reproductions of the impact on the water's surface.

The generative cones are ever seeking contracted gravitational centers to continue their appearance as form, and the radiative cones are ever seeking the expansion of equilibrium in inertia to dissipate their appearance as form, into plane from which all form is evolved.

Each wave is, therefore, built up simultaneously in sequential stages in sequential preponderance of opposite dimensions.

Waves are not those parts which are either wholly above or wholly below their axes.

One wave of any dimension is that portion of the sequence which is bounded by the turning point of one crest and the next trough.

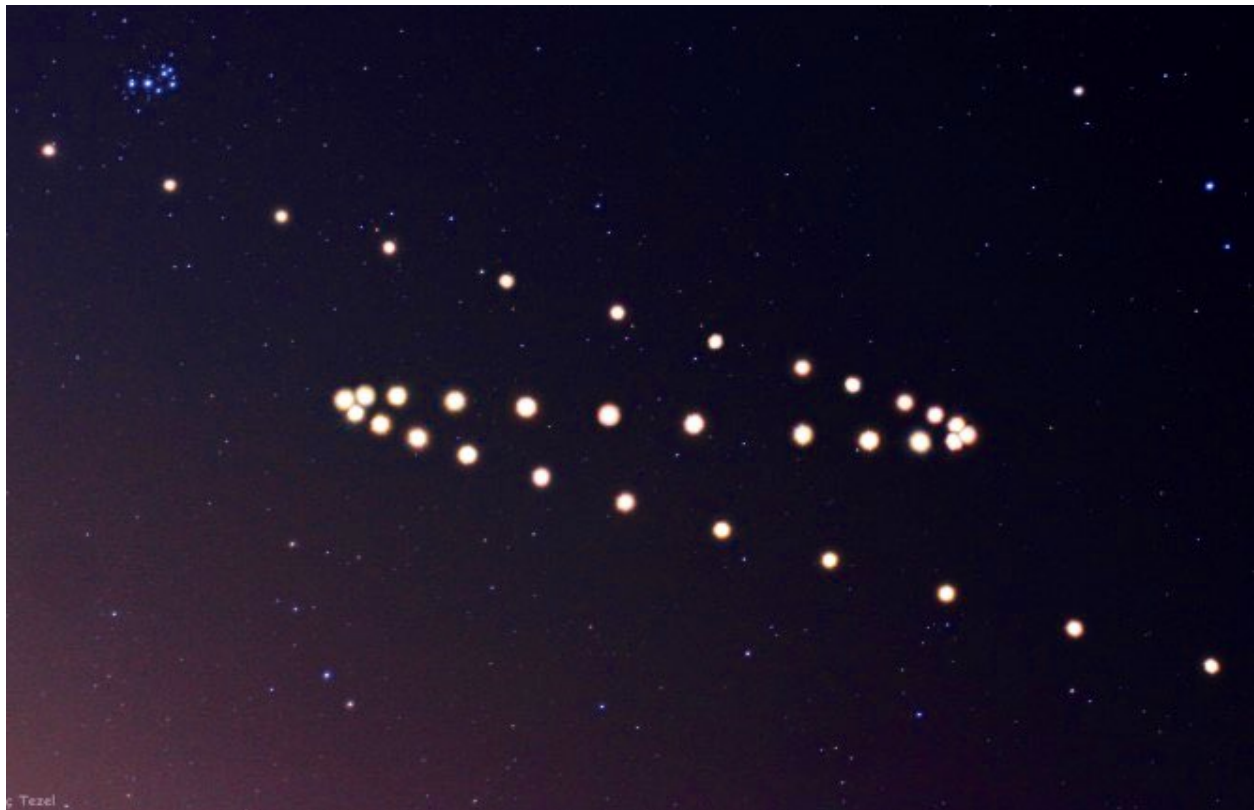

The inertial plane of the wave coincides with the line of axis of the wave.

A wave begins at the inertial plane and extends in both directions from the inertial plane to its repetitive point at trough and crest.

The popular concept that light travels along undulating waves is not in conformity with the laws of motion. Waves are constructed in sequential stages until they meet at their overtone positions in trough and crest.

No state of motion travels beyond the boundaries of its own wave mass. It is reproduced by union with its opposite effect at every inertial plane which divides masses in motion in the universe of dimension.

Neither is the wave in one plane. The wave is a spiral... *14

ABOVE: TIMELAPSE OF RETROGRADE MOTION OF MARS IN 2005. ASTROPHOTOGRAPHER TUNC TEZEL CREATED THIS COMPOSITE BY SUPERIMPOSING IMAGES TAKEN ON 35 DIFFERENT DATES, SEPARATED FROM EACH OTHER BY ABOUT A WEEK. *15

Sometimes, as seen in Earth's sky, the planets seem to move backwards!

Typically, the planets shift slightly eastward from night to night, drifting slowly against the backdrop of stars. From time to time, however, they change direction. For a few months, they'll head west before turning back around and resuming their easterly course. Their westward motion is called retrograde motion by astronomers...

Ancient astronomers—who believed Earth lay at the center of the universe—went to complicated lengths to attempt to explain retrograde motion. Theirs was a complex cosmology... Astronomers like Nicolaus Copernicus and Johannes Kepler finally set us all straight when they realized Earth orbited the sun. *15

Three Great Lights

My brother, on being brought to light in this degree, you discover both points of the compasses hid by the square, which is to signify that you are yet in darkness as respects Masonry, you having only received the degree of an Entered Apprentice. You also discover the three great lights of Masonry, by the help of the three lesser. The three great lights in Masonry are the Holy Bible, square, and compasses, which are thus explained: the Holy Bible is the rule and guide of our faith and practice; the square, to square our actions; the compasses, to circumscribe and keep us within bounds with all mankind, but more especially with a brother Mason. The three lesser lights are the three burning tapers which you see placed in a triangular form about this altar. They represent the sun, moon, and Master of the Lodge; and as the sun rules the day, and the moon governs the night, so ought the Worshipful Master to endeavor to rule and govern his Lodge, with equal regularity. *¹⁶

Soviet-Style Abuse of Psychiatry is Now Practiced in the US

Comrade Psychiatrist is unhappy with Mr. Trump's "delusional reformism"

American progressives have been enamored with many Soviet ideas in their time, trying to transplant them to the U.S.—from government *diktat* and central planning to academic indoctrination and propaganda through entertainment. And while the Soviet Union has gone the way of the dodo, its glorious socialist legacy is still up for the picking.

One of these unparalleled Soviet achievements is the use of psychiatry to silence dissent and delegitimize political opposition, allowing the KGB to lock up dissidents in mental hospitals nicknamed *psikhushkas*.

In the United States today hundreds of zealous progressive psychiatrists are similarly diagnosing Donald Trump "in absentia" with a variety of incapacitating diseases, from narcissism to neurosyphilis, demanding that he be deposed (and hopefully locked up in a *psikhushka* along with his supporters).

First, some history. From the 1950s through the 1980s, thousands of Soviet dissenters were incarcerated in mental hospitals. This helped the Communist government to destroy its critics both physically and mentally without the potentially messy trials, while at the same time discrediting all political dissent as the product of ill minds.

According to the acclaimed Sovietologist Robert van Voren, the political abuse of psychiatry in the USSR "originated from the concept that persons who opposed the Soviet regime were mentally ill because there was no other logical explanation why one would oppose the best sociopolitical system in the world."

In theory Soviet psychiatry was guided by Karl Marx's "dialectical materialism" (as such, it rejected psychotherapy as "American pseudo-science" that stood in the way of scientific progress). In practical terms, its first duty was to serve the Party and the government in building the communist society. To that end leading Soviet psychiatrists fabricated a convenient disease called "sluggish schizophrenia." The "sufferers" didn't necessarily need to be psychotic; they could maintain productive careers and have families without anyone noticing their unusual behavior. The symptoms of the disease were pessimism, depression, delusional rejection of progressive ideas, obsessive criticism of the government, and paranoid thoughts about being watched by the KGB.

The government psychiatrists were especially concerned with diagnosing and treating the so-called delusion of "reformism"—persistent ideas about reforming the Soviet political and economic system.

No doubt, American progressive psychiatrists would be only too happy to diagnose "reformist" delusion in Trump and his supporters, who are known for their persistent calls to "drain the swamp." The rationale behind the "mental disorder" diagnosis seems familiar: no sane person who has attended public schools and watched CNN would oppose Obama's "fundamental transformation of America" or the candidacy of the honest, intelligent, healthy, and mentally stable Hillary Clinton.

Therefore, only the mentally ill would challenge political correctness, the growth of government, redistribution of wealth, socialized healthcare, man-made climate change, multiculturalism, open borders, the media's trustworthiness, and the Democratic Party in general.

American progressive psychiatrists don't necessarily need to copy their Soviet colleagues. Having their minds attuned to the same progressive brainwaves should be enough to produce similar results. If all you have is a hammer, everything looks like a nail.

There is an old Soviet joke about a man who worked at a secret military plant which was disguised as a sewing machine factory. He stole some parts hoping to build his wife a sewing machine at home, but every time he assembled the parts he ended up with a machine gun. Similarly, progressivism disguised as psychiatry (or as any other science for that matter) will only end up with more *psikhushkas*.

It started with a trickle.

Back in 2009, a conference of British "eco-psychologists" argued that "climate change denial" should be classified as a form of "mental disorder"—a notion cheered on by American progressives.

In 2012, a professor of sociology and environmental studies at the University of Oregon addressed a major international science conference in London with a message that any "resistance" to the man-made climate change theory "must be recognized and treated."

In 2014 Psychology Today published an article by a "therapist turned advocate" who listed symptoms of climate-change denial to help identify this "disorder," and thought that her job was to induce climate-change-related terror and anxiety in her patients who didn't already exhibit these conditions, openly bragging about breaking the Hippocratic oath to "do no harm."

In July 2015, Clinton-appointed U.S. District Judge Richard M. Berman already applied the idea of psychiatric treatment of political dissent in the sentencing of the well-known conservative author and filmmaker, Dinesh D'Souza.

Enter Donald Trump.

In November 2015, as Trump became a frontrunner in the GOP primaries, *Vanity Fair* ran with this story: Is Donald Trump Actually A Narcissist? Therapists Weigh In! "As his presidential campaign trundles forward, millions of sane Americans are wondering: What exactly is wrong with this strange individual? Now, we have an answer."

In June 2016, when it became clear that Trump had a clear path to the Republican nomination, *the Atlantic* published a long "research" piece titled, The Mind Of Donald Trump: "Narcissism, disagreeableness, grandiosity—a psychologist investigates how Trump's extraordinary personality might shape his possible presidency."

Almost simultaneously, *the Huffington Post* weighed in with Too Sick To Lead: The Lethal Personality Disorder Of Donald Trump.

In August 2016, *Politico* amplified Mika Brzezinski's plea: A psychiatrist needs to examine Trump.

In January this year, the *New York Daily News* quoted a number of progressive psychiatrists in President Trump exhibits classic signs of mental illness, including 'malignant narcissism,' shrinks say.

The same month, the *Independent* published 'Malignant narcissism' [sic]: Donald Trump displays classic traits of mental illness, claim psychologists: "More and more mental health experts are sharing their diagnoses to warn the public."

This February has seen a deluge of articles with repetitive headlines accusing Trump of psychiatric and personality disorders—from *Common Dreams* to *Scientific American* to *U.S. News*.

There have been at least two online petitions regarding Trump's mental health. One such petition bears a title in the unmistakable style of Soviet government psychiatrists: Mental Health Professionals Declare Trump is Mentally Ill And Must Be Removed. It was posted by John Gartner Ph.D., who claims, without ever meeting the president in person, that "Donald Trump manifests a serious mental illness that renders him psychologically incapable of competently discharging the duties of President of the United States."

Another petition by Dr. Lance M. Dodes, M.D., written in the form of an open letter to the editors of the *New York Times*, stated that "Mr. Trump's speech and actions demonstrate an inability to tolerate views different from his own, leading to rage reactions. His words and behavior suggest a profound inability to empathize. Individuals with these traits distort reality to suit their psychological state, attacking facts and those who convey them." The letter, as published in the *New York Times*, concludes that all of the above "makes him incapable of serving safely as president."

The petition was signed by 35 medical professionals, who had never seen Mr. Trump in person. Their diagnosis could only be based on observing their progressive patients who couldn't stop ranting about Trump's derangement and whose maniacal obsession with Trump contributed so much to the therapists' bank accounts that the doctors were compelled to "give back to the community" and signed the anti-Trump petition as a way to relieve their guilt. (We've never met these people, which makes our psychoanalysis of them just as credible as the psychoanalysis of President Trump published in the *New York Times*.)

With so many psychiatrists suddenly arriving at a "scientific consensus," it seemed that the world was ready for another award-winning *Inconvenient Truth* movie declaring that "the science is settled" and that "97 percent of psychiatrists believe that Trump's mental illness is real." Their opponents were *this close* to being labeled as flat-earthers and science-deniers.

Just then the eminent psychiatrist Allen Frances, who wrote a book on psychiatric disorders, dumped a bucket of cold water on his colleagues, calling them "amateur diagnosticians" who "disregarded professional ethics."

In a letter to *The New York Times*, published under the title, An Eminent Psychiatrist Demurs on Trump's Mental State, the snarky Dr. Frances gave Trump a clean bill of health, saying that "he may be a world-class narcissist, but this doesn't make him mentally ill," and noting that "It is a stigmatizing insult to the mentally ill (who are mostly well behaved and well meaning) to be lumped with Mr. Trump (who is neither)." We can only add that in the Soviet book of Political Psychiatry, Dr. Frances would be denounced as a revisionist bootlicker and a pseudo-scientist, and rewarded with an involuntary stay in a *psikhushka* for deviating from the Party doctrine.

The festival of psychiatric progressivism still culminated with the left-wing *New Republic's* publication of A Medical Theory for Donald Trump's Bizarre Behavior: "Many mental health professionals believe the president is ill. But what if the cause is an untreated STD?" Its author, Dr. Steven Beutler, M.D., an infectious disease specialist who must have missed the memo from Dr. Frances, refers to the above "scientific consensus" and offers a theory that Trump may be suffering from untreated syphilis—a sexually transmitted disease that can destroy the human mind and personality. The logic is bulletproof: "[Trump] was sexually promiscuous in the 1980s, a period when syphilis cases were rapidly increasing in the U.S."

No word on whether Trump could have contracted syphilis from sexual contacts with Vladimir Putin, but given the number of media headlines exposing the alleged Trump-Putin "bromance," a Pulitzer Prize is in the cards for a journalist-turned-psychiatrist (or vice versa) who can prove that both Trump and Putin exhibit the same symptoms of mental derangement stemming from a sexually transmitted disease they gave each other during a past secret "bromance" (dates and locations to be provided by a self-described former British intelligence officer).

Perhaps progressive psychiatrists can also explain the sudden, psychologically improbable switch from admiration of Russia to fear and paranoia of Holy Mother Russia that surpasses the cartoonish Red Scare. Our own diagnosis suggests that what the progressives loved most about Russia was not its people but the socialist system the Russians lived under, experiencing all the sluggish schizophrenia and delusional reformism conjured up by government psychiatrists. On that grandiose scale the people were unimportant; they might as well be monkeys or penguins. Now that the Russians have torn down socialism, their country is suddenly ripe for demonization. Putin's authoritarianism alone can't explain such disgust; the progressives have embraced worse monsters in the past. A more likely explanation is that Putin's regime is much less progressive than the old Soviet one. No socialism, no love. And Putin likes Trump. The horror.

"Trump isn't crazy," argues Dr. Frances on his blog in *Psychology Today*. "The urge among amateur diagnosticians to mislabel Trump as mentally ill is perfectly understandable," he writes in another blog post. Dr. Frances understands the motives of his progressive colleagues because he resents Trump just as much as they do. The difference is that he has been able to keep his sanity, while his colleagues' obsession with Trump has caused them to lose touch with reality, along with their ability to distinguish between opinions and facts.

It is logical to ask then, why doesn't the good doctor diagnose the obvious insanity of his colleagues, at least in generic terms, as a medical phenomenon? He might even discover a link to the sluggish schizophrenia of the progressive movement.

Such a proposition isn't all that unthinkable. In the *Los Angeles Times*, of all places, there appeared an op-ed titled, Do you suffer from Trump Derangement Syndrome? with helpful descriptions of the symptoms and stages of the disease... Without a doubt the efforts of the remaining few sane psychiatrists in America would be best spent on trying to find treatment for this debilitating mental disorder. *¹⁷

Raptor Consciousness

Recently, the precarious situation for Humanity here on 3D Earth has intensified beyond belief. We're witnessing a wholesale onslaught of our natural eco-systems by an Opposing Consciousness acting behind the scenes, pulling the strings of power. GMO, geo-engineering, sweeping control of business and banking, the false flag war on terror, an intense media clampdown, altogether strongly indicate the intention to control our planet, creating a synthetic reality with humanity enslaved within. It will not succeed! A new evolution on 5D Earth will liberate humanity and Gaia will reclaim the physical plane. This third part of the series, is about how can we each be a part of that realignment...

Unwinding the matrix progressively

"The Matrix" is an iconic film of our time. But as many others, I also believe it to be a powerful metaphor—a divine message—to humanity during these times of great upheaval and thereby great opportunity...

We are indeed living in a matrix of energy: various frequencies of vibration, purposefully entwined to separate mankind from higher conscious awareness. Past life memories have been wiped and DNA progressively downgraded by a toxic onslaught to sense and sensibility. The only meaningful solution is evolution—elevation into a more highly divine form—something I've felt given to call "Divinicus".

I've been working behind the scenes as a part of a higher dimensional team. It was realised that although perhaps desirable, the matrix could not be brought to a sudden end. It would risk catastrophe and chaos. The Opposing Consciousness alliance consisted of several inter-related species. If these could be progressively realigned with the source, then the matrix would unwind in a more manageable way. It had to proceed as a 'managed demolition'. I strongly believe we're now witnessing the early stages of this. It's why there's so much controlled desperation witnessed in the choices made by the powers-that-be. They're losing their grasp on power. It was the higher Annunaki Consciousness that began to realign first. Although able to operate through individual form, it is a highly advanced—collectivised—consciousness, able to bring manifesting power to bear as one, and act through people.

That's what made it so powerful. In my knowing, it had been disconnected from the source during the tumultuous ascension of the Sirius Star system some 120 million years ago. Since that time, the Annunaki had been 'floating adrift'—disconnected from the source—filling the void by creating and manipulating synthetic realities.

The power of unconditional love

Unconditional love wins the day! It's the only thing that can. But it has to be a deep empathic love. It has to be one that understands the plight of the sufferer. One that can hold the space, tolerate intense darkness, yet not judge. It has to be strong—forgiving yes—but not swerving from truth either. If you can stomach this darkness seeping through your pores and yet not flinch back, then you have the capacity to truly help: **right in the midst of the distorting density, you may help OC connect a silver thread of light, all the way back to the source.**

This is what we helped them feel and thus how they realigned. The head of the 'snake' is now gone, in a malevolent sense. I now experience them predominantly helping, benign, although there may be misleading factions that still take time to come back into alignment. It leaves the 'reptilian' body of the snake. It's what I call the raptor consciousness...

It's that fearful energy that doubts the natural benevolence of the universe and therefore seeks to control life. We've probably all felt it: it is one that distracts from the pain of disconnection from God through excessive consumption. You witness it now, rife across society, from the comfort food people eat, to sanitised aggression and the distractive gadgets people are 'entertained' by. It's that which twists and turns nervously in the quiet space. It's one that tries to impose will. It is that which 'revels in physicality', shutting itself off from divine connectivity. This is what humanity is now faced with.

And as the head has been severed, the raptor body is writhing in the final throws, the last acts of desperation. Even so, it is not about us fighting it. Standing firmly in our truth yes, but not judging or creating negative polarity "us and them". It's about recognising this energy is a manifestation of our inner selves and working to heal that. We're beginning to unravel—within ourselves—and as we do, the outer world begins to unravel too. The darkness is amplified into the light for everyone to see. That's why there's still such lightly-veiled-animosity present in world politics for example. So how can we each deal with that?

Realignment in our own behaviours

This raptor consciousness forms the bedrock of society. But deeper still, Homo Sapiens is a hybrid species with this consciousness interwoven within our DNA. It can be unraveled and repaired, that's why evolution is so important to mankind. The physical is the mirroring reflection of the spiritual...

If you can realign within your being, find the truth of who you really are, and express that the whole time, then the universe will have no choice but to manifest an appropriate vehicle for you. Yes, there is no greater power in the universe than the authentic expression of "I am". It has the power to change you, and positively influence the world around you.

It's all about reclaiming sovereignty of being. Humanity has devolved the responsibility of choice to 'greater powers' for far too long. Whether it be a politician, religious leader, the company you buy from or even the corporation you work for, humanity has accepted programming to make choices that serve only the Intervention Agenda. People have denied for too long, the buried aspects of their own darkness and lack of personal sovereignty. Humanity has swept choice under the carpet of denial. Well now it is time for us each to take a clear look in the mirror, take back our responsibility for being, reclaim our power and evolve into the new human form. To me, it's all about "Divinicus"—The Rise of the Divine Human.

We do it by walking the spiritual path; it's the constant conscious choice in every moment, responding to higher truth. But the crucial thing here is, that you make choices that are totally authentic to you. Not ones that you've witnessed in some spiritual leader and now wish to replicate. This simply creates the spiritual identity, which is divorced from the true depth of reality. It plays to the raptor consciousness, because the facade you've created is paper thin. There is no real depth of energetic power. It laughs back at you!

The key is to realise in all distortion there is a hidden truth. Even the raptor consciousness, at it's core, demonstrates the willingness to dive headlong into the fullness of life. Not to deny or falsely renounce. If you can be totally swallowed up in the physicality of life—**and yet still find yourself in it**—then you send out a realigning beacon, even into the depths of the 'raptor consciousness'. It responds to your positivity...

Ultimately, it will lead to the transformation of humanity. *¹⁹

Anthem

The birds they sang
at the break of day
Start again
I heard them say
Don't dwell on what
has passed away
or what is yet to be.
Ah the wars they will
be fought again
The holy dove
She will be caught again
bought and sold
and bought again
the dove is never free.

Ring the bells that still can ring
Forget your perfect offering
There is a crack in everything
That's how the light gets in.

We asked for signs
the signs were sent:
the birth betrayed
the marriage spent
Yeah the widowhood
of every government—
signs for all to see.

I can't run no more
with that lawless crowd
while the killers in high places
say their prayers out loud.
But they've summoned, they've summoned up a thundercloud
and they're going to hear from me.

Ring the bells that still can ring ...

You can add up the parts
but you won't have the sum
You can strike up the march,
there is no drum
Every heart, every heart
to love will come
but like a refugee.

Ring the bells that still can ring
Forget your perfect offering
There is a crack, a crack in everything
That's how the light gets in.

Ring the bells that still can ring
Forget your perfect offering
There is a crack, a crack in everything
That's how the light gets in.
That's how the light gets in.
That's how the light gets in. *19

Final Solution

Albert Pike, who was a captain for the US army during the American Civil War, is alleged to have penned a doctrine to an Italian politician outlining plans for three global conflicts to bring a one world government. *20

William Carr is the main person behind the very widely quoted "Illuminati Plan of 3 world wars"... *21

"The First World War must be brought about in order to permit the Illuminati to overthrow the power of the Czars in Russia and of making that country a fortress of atheistic Communism. The divergences caused by the "agentur" (agents) of the Illuminati between the British and Germanic Empires will be used to foment this war. At the end of the war, Communism will be built and used in order to destroy the other governments and in order to weaken the religions."

"The Second World War must be fomented by taking advantage of the differences between the Fascists and the political Zionists. This war must be brought about so that Nazism is destroyed and that the political Zionism be strong enough to institute a sovereign state of Israel in Palestine. During the Second World War, International Communism must become strong enough in order to balance Christendom, which would be then restrained and held in check until the time when we would need it for the final social cataclysm."

"The Third World War must be fomented by taking advantage of the differences caused by the "agentur" of the "Illuminati" between the political Zionists and the leaders of Islamic World. The war must be conducted in such a way that Islam (the Moslem Arabic World) and political Zionism (the State of Israel) mutually destroy each other. Meanwhile the other nations, once more divided on this issue will be constrained to fight to the point of complete physical, moral, spiritual and economical exhaustion...We shall unleash the Nihilists and the atheists, and we shall provoke a formidable social cataclysm which in all its horror will show clearly to the nations the effect of absolute atheism, origin of savagery and of the most bloody turmoil. Then everywhere, the citizens, obliged to defend themselves against the world minority of revolutionaries, will exterminate those destroyers of civilization, and the multitude, disillusioned with Christianity, whose deistic spirits will from that moment be without compass or direction, anxious for an ideal, but without knowing where to render its adoration, will receive the true light through the universal manifestation of the pure doctrine of Lucifer, brought finally out in the public view. This manifestation will result from the general reactionary movement which will follow the destruction of Christianity and atheism, both conquered and exterminated at the same time." *22

Black Hole

Dream notes #99: I'm being tested, or observed, by a trainer who's working with a kind of 'get over it-just do it' type of character, someone who's trained himself to be in peak condition. We travel by boat to a secluded place where he is, there are various guests, social high society types, even prostitutes on board, and other personalities. In the group there's a discussion about film age censorship/restriction, or rather why certain movies are rated higher than others. I try explaining to a British man he doesn't understand because he's comparing movie A with movie B on technicalities, rather than impressions and appearances. For example, 'Sleepless in Seattle' being considered a higher rated film ... blah blah it really doesn't matter. I never get to say what's 'on my mind' about the subject, as it doesn't appear I wasn't really meant to be in this conversation, or perhaps, was more concerned about convincing him of my views. These aren't 'my people' [as in, I'm not part of London society 'anymore'?]. No one really cares, anyway, it's not what they're there for.

We disembark. From the deck above, like a scene from a film, I watch people walking off, the view tilting up like in a film's 'arrival' scene. There are a few people in 'black & white' for some reason, the others are in their regular color, the overall light is ambient and somewhat golden hour, getting darker.

We get to a building with a front facade. We're welcomed by this man of a 'just do it' kind of character. The people who were 'B&W' are now in color, however, I notice they might be the prostitutes, and I can't see their faces clearly.

He starts making a welcoming speech, talking about his past and how he built himself up to be this man in great shape today. Pre-recorded videos on the TV reinforce his message, as we see him in training, with some kind of net racket, and white balls bouncing around, which he's catching and returning. He stumbles, and clearly doesn't find it easy to be co-ordinated and following through in the manner he's wishing to. He appears like a young teenager playing a sort of tennis with fisherman nets around racket frames for the first time. It's obviously difficult for him, but it looks like something I would be able to do, or perhaps, used to be able to do.

Watching him in the videos, suddenly brings the theory into practical reality, and I find myself in his position now, of being trained in a somewhat different way...

I'm sitting down in the same brightly lit office as in the video—feels like a sports physician or coach trainer's room—and hitting tennis-sized white balls with my fisted knuckles at various target leather pouches (cushions) stacked up against the wall. I've now been training for several months, following his program, tailored to me, and I've gotten my co-ordination back! I'm confident in my strikes now.

[This may be a reference to being confident in my swimming stroke, which suddenly seemed to 'click in' today, as I felt like I'd turned a corner and it was all 'coming together' for me now physically... I've been swimming much better now, and have room to improve.]

Every ball I hit with my knuckles (which is normally hard to aim with), goes exactly where I want it to, despite the odd shapes involved, and unlikely impression of being able to.

Suddenly, a black ball appears amongst the white ones. And I don't hit it. I seem to freeze in sight of it, as it bounces (floating, time seems to slow down as I focus on it) before me, it draws my attention for it reflects no light at all, which seems like an anomaly. It's physically the same size of ball, so it should make no difference at all, yet to me, it appears like an inversion of all that is pure, white and clear, as if

it's 'darkness' [a black hole] itself in physical form, and that by touching it, something may happen where it actually draws me into to itself.

I have difficulty 'seeing it' physically, and engaging it mentally with determination and decision like the white balls, when looking at it and being able to confidently strike it with my fist. With the white balls alone I could strike these without thinking at all. Now I can't seem to lift a finger, it's like being hypnotized.

[This may also have to do with the fact that a dark black object, reflects very little or no light by which it makes it clear to identify, especially in physical form... Just like 'evil' can hide in a person's character, making it difficult to identify (a reflection of my previous experiences with 'bad' people in my former life?). In my mind at least, recognizing it's physical characteristic (who/what/why) is necessary to 'being able to decide' engaging it. IOW, I have to 'see' what I'm looking at, and be confident, to strike it—like I can the other white balls which I see clearly, and connect with, without any hangups.]

The black man who's training the man featured in the videos, notices this issue with the dark targets, and challenges me about it, in a manner of questioning which disguises a 'higher level' question—of whether I would be suited for combat against 'shadows' (evil?), or perhaps just at night?

[Here I make some mention of braving my own shadow in the past few years, and also, of having faced, and lost/struggled against shadowy people and situations, but can't remember exactly what I say, the topic leads to ninjas somehow.]

"Could you handle that? Fighting ninjas?" the trainer asks me.

An image of a ninja moving in to attack is in front of me, moving around, appears in my mind, it's dark and late at night, I can barely make out the 'ninja', as he appears like a shadow, moving with night. In the vision, I feel helpless to counter attack him, much less defend myself against, as I have difficulty identifying the person behind the dark clothes, the body and motions they're making. It's a dark blur.

"You know... I'm a bit scared." I answer, still thinking of that black ball.

I can see myself reflected in a mirror, my body's frail stance, all the way up to my eye level. I have to lean down to see myself fully, as standing upright the mirror stops just at my eye level, above which I see the face of the trainer talking to me from behind the mirror. I appear a lot less confident in my stance now, diminished, more doubtful. And imagine this is how others must perceive me now, the mirror is revealing it.

"There are ways to treat that. Have you heard of methylenediox..." (MDMA)

I almost interrupt him. He seems to correct himself.

He changes to another word "Lysergic acid dieth..."

"L.S.D." I respond quickly.

"Yeah" he says.

"The first/only/last time I took LSD, it took at least 3 days before I could even begin to contemplate the magnitude of what I'd just consciously experienced... It would be months before I could begin to make sense of the experience, and the changes which resulted from dropping/losing my emotional shield..."

[Note: The one time I tried LSD, I was almost drunk, which was a terrible idea. LSD being a powerful psychedelic drug, is intended for conscious expanding use, not recreational. The experience profoundly changed me, positively, at the time, though I didn't remember the experience because of the alcohol, and the 'come down' wasn't pleasant. I've had successful and pleasant experiences with certain fungi, controlled by myself. With proper use, these types of experiences can heal deep existential wounds, through dramatic perspective shifts, exploring of conscious mind, by spiritual confrontation, etc.]

As I respond with this quote, I notice in the mirror I'm taking on a more defensive stance, like that of being more of a victim, rather than that of a confident warrior who's been bravely facing his own fears. That's the way I'm talking now.

I think the defensiveness is also related to the DUI—and the entire therapy process with my father—I've just been through, which included 'treating' my energy against the after effects of certain drugs, including L.S.D. Whereas, the 'new warriors' of the previous generation weren't so defensive about experimenting with everything that promised hope of self-improvement. (Which is the model standard I'm being compare to against now, as exemplified by the man in the videos, and people I've known and met, many of whom are in Western USA living a very 'productive' life, which I'm not). L.S.D. is being used today in controlled studies to treat certain 'life debilitating' issues, which are caused by more existential than physical issues, and the trainer seems to think it may help overcome this darkness...

[Notice the 'tone' of 'victim': I must have mentioned more about the past here, as I'm talking more like I used to now, like a victim, rather than a 'soldier prepared for life'.]

Finally, the man from the videos, the exemplar I've followed all the way here to train myself to become, to help rebuild myself and the potential to grow by, speaks up:

"With all this talk of self-sacrifice, you know what I think?" he proposes to the three of us.

"You just won't go there."

[There—not a physical place. Meaning, that place of assured self-confidence, courage, bravery, with nothing holding me back... To spring forth into the light of life, and make the best of it, conquer & conquest all doubt & fear. As the Army used to advertise, to be the best that I can be, mentally and physically. Which are not, however, the traditionally creative and "artist" qualities which are such a part of me. Perhaps therein lies confusion: of my goals, intentions, and integrating these with who I am?]

His words have an 'eternal' quality about them, like spoken through the barrier of conscious and unconscious mind, from the deepest existence and source of all life. Resonating like an echo in eternity, quietly speaking volumes above shouting.

I wake up as I hear these words.

And I've been writing this down, and reflecting on all of this since. Alone writing this, is helping me acknowledge this issue, and maybe bring it into awareness, the idea remains to be addressed if I am to continue moving forward, lest I remain in my current state infinitely... Which is not my intention.

Continued love, support, and consideration for alternative treatment outside of the medical profession, along with persistence, courage, hard work, and determination might resolve this going into the future.

*I certainly do sense hesitation, and a lingering darkness, which doesn't seem to respond to light, no matter how much I shine into it... **A real black hole in my soul.***

It would take 2+ years following this dream, before I could overcome this black hole with God.

Personal Trainer: To see or dream that you have a personal trainer suggests that you need to push yourself to do better in all that you do. Do not take the easy way out. Alternatively, the dream indicates that you are seeking guidance and help in improving your self image.

Boat: To dream that you are in or see a boat signifies your ability to cope with and express your emotions. Pay particular attention to the condition and state of the waters, whether it is calm or violent, clear or murky, etc. Are you "smooth sailing"? Alternatively, you may be ready to confront your subconscious and unknown aspects of yourself.

Black And White: To dream in black and white suggests that you need to be more objective in formulating your decisions. You may be a little too unyielding in your thought process and thus need to find some sort of balance between two opposing views. Consider the views and opinions of others.

Gold: The golden color reflects a spiritual reward, richness, refinement and enhancement of your surroundings. It also signifies your determination and unyielding nature.

Sunset: To see [*indirectly*] the sunset in your dream indicates the end of a cycle or condition. It is a period of rest, contemplation and evaluation.

Prostitute: Alternatively, the dream may be a metaphor suggesting that you are "prostituting" yourself in some situation, either emotionally or morally. Are you selling yourself in some way? To see or dream that you are with a prostitute suggests that you are feeling sexually deprived or needy. Alternatively, the dream is commenting on how you wished that sexual relationships were more simple and straightforward.

Face: To see your own face in your dream represents the persona you show to the world as oppose to the real you. It may refer to how you confront problems and deal with issues in your life.

Speech: To hear a speech in your dream suggests that your inner feelings are being made known to those around you. Consider what is said in the speech.

Videotape: To watch a videotape in your dream indicates that you need to stop and relax. Take a break from life and let your mind rest... It may also represent past memories or repressed thoughts that are playing out as the dream videotape.

Television: To dream that you are watching television represents your mind and its flowing thoughts. The dream reflects how you are receiving, integrating, and expressing your ideas and thoughts. The programs you dream of watching are an objective view of the things that are in your mind...

Training: To dream that you are training for something suggests that you are lacking self-confidence and are having anxieties about your ability. The dream may also reflect a desire to change your status or position in life.

Ball: To see or play with a ball in your dream symbolizes completeness and wholeness. It may also indicate that you need to be more in tune with the inner child within. The dream may also be a metaphor for the testicles. Consider also the phrase, "he's got balls" to indicate guts and strength. To dream that you are watching a ball game indicates that you need to take more initiative. Your lack of action may stem from your shyness which you must overcome. Perhaps you are too overly self-conscious.

Bright: To dream that something is bright represents divinity, a higher consciousness, and spirituality. You need to show your honor toward an important person or situation. The dream may also be a metaphor for intellect and someone who is smart. If your dream is particularly bright and vivid, then it could indicate a prophetic or epic dream.

Office: To dream of your work office indicates that you cannot seem to leave your work at the office. You are overworked or have too much on your mind. Alternatively, an office symbolizes practicality, status, accomplishments and your place in the world. If the office in your dream is unfamiliar or strange, then it suggests that you are comparing yourself to someone else. You are measuring yourself against other's standards.

Knuckles: To see knuckles in your dream represent hard work and diligence.

Punch: To dream that you are punching someone or something represents hidden anger and aggression. It may also be a symbol of power and your ability to draw strength from within yourself... To dream that you are unable to throw a punch indicates that you are feeling helpless. You may have self-esteem and confidence issues.

Leather: To see or wear leather in your dream represents toughness and ruggedness. It may imply your thick-skinned nature. Or perhaps you are seeking protection from the elements.

Cushion: To see or use a cushion in your dream suggests that you are in need of more rest and relaxation.

White: White represents purity, perfection, peace, innocence, dignity, cleanliness, awareness, and new beginnings. You may be experiencing a reawakening or have a fresh outlook on life.

Black: Black symbolizes the unknown, the subconscious, danger, mystery, darkness, death, mourning, rejection, hate or malice. The color invites you to delve deeper in your subconscious in order to gain a better understanding of yourself. It also signifies a lack of love and lack of support. More positively, black represents potential and possibilities. It is like a clean or blank slate.

Black Hole: To see the black hole in your dream indicates that there is no turning back on a decision that you have made. You may be feeling stuck in a situation. Alternatively, the hole symbolizes the subconscious and the unknown.

Darkness: To dream that darkness comes upon you signifies failure in some work that you are attempting. Darkness is synonymous with ignorance, the subconscious, evil, death, and fear of the unknown.

Men: To see men in your dream represent an authoritative figure or a father figure. If you are a woman [*I'm not a woman, but I do have feminine aspects in my birth chart*] and dream that you are in a room full of men, then it highlights the masculine aspect of yourself. The dream forces you to acknowledge your authoritative and aggressive side. Consider also how the men are dressed as this will provide a clue as to what area in your life you need to assert more power.

Shadows: To see your own shadow in your dream signifies an aspect of yourself which you have not acknowledged or recognized. It may be a quality about yourself or a part of you that you are rejecting or want to keep hidden. These qualities may not necessarily be negative, but can be creative ones. Alternatively, the dream may mean that you are in someone else's shadow. You are constantly being overlooked and are fed up with it. To see a shadowy figure in your dream represents characteristics which you have not acknowledged or incorporated into your own personality.

Ninja: To see a ninja in your dream symbolizes a someone in your life whose intentions are unclear. You may feel threatened by this person's abilities or suspicious of their motivations. To dream that you are a ninja indicates passive aggressive behavior. You are trying to be defiant without appearing confrontational.

Scared: To dream that you are scared indicates that you are experiencing feelings of self-doubt, incompetence, and lack of control in your waking life. Perhaps you are having second thoughts about a decision you have made. Anger often masquerades as fear, so also consider issues about which you are angry about in your waking life.

Mirror: To dream of your own reflection in the mirror suggests that you are pondering thoughts about your inner self. The reflection in the mirror is how you perceive yourself or how you want others to see you. You may be contemplating on strengthening and changing aspects of your character. If you dream that that you do not see your reflection in a mirror implies that you have lost your self-identity. Perhaps you have changed for the benefit of others that you don't know who you are anymore. Mirrors symbolize the imagination and the link between the conscious and subconscious. Alternatively, the dream means that you are unwilling to acknowledge your subconscious emotions. To see a mirror in your dream symbolizes a loved one or good friend.

Reflection: To see your reflection in your dream represents your true self; it is time to look within. The reflection may highlight both your flaws and positive attributes. Learn from your flaws and how to improve them. At the same time, appreciate your good qualities. Alternatively, your reflection indicates how you want others to perceive you.

Cure: To dream of a cure for a disease or illness indicates positive changes ahead. Things are taking a turn for the better. Alternatively the dream represents hope.

LSD: To dream that you take LSD represents an awakening and expanded consciousness. You are looking at things from a new perspective.

Defend: To dream that you are defending yourself suggests an underlying hurt. It may parallel a waking life situation where you are being put on the defensive. [*What's the underlying hurt, or cause behind defending myself in this?*]

Question: To question something in your dream signifies self doubt. The ability to question things in your dream may also lead to higher knowledge and spiritual enlightenment. To dream that someone is asking you a question suggests that you have information or knowledge that needs to be shared. *²³

Addendum: *In simple: When you stand still long enough, time will correct everything within space...*

For me, it's been imperative to learn to be calm, still, quiet, without any movement in space, so that I could allow time to catch up with all the movements I'd made throughout my life, running away to escape from facing the true causes of this emotional affliction which had their origins in a past a long time ago, and consequences that had interfered with "how I should have developed" until now. From now on, will longer be running away, unless to avoid harm, and will instead, take conscious, precise actions agreeing with my true self's best interests (not those of others used to expect by my old self).

Father

Our Father in Heaven,
hallowed be thy name,
Let thy kingdom come.
Let thy will be done,
as in heaven, so on earth.
Give us bread,
for our needs from day to day.
Forgive us our offenses,
as we have forgiven our offenders.
Do not let us enter into temptation,
but deliver us from error,
Because thine is the kingdom,
the power and the glory forever.
Amen

Number Sequences From The Angels

The angels do their best to get our attention and to communicate with us. In this way, they help us heal our own lives. However, we often discount the signs they give us, writing them off as mere coincidences or our imagination. The angels say: "We can't write our messages to you in the sky. You've got to pay attention and believe when you see any patterns forming in your life especially in response to any questions or prayers you've posed. When you hear the same song repeatedly or see the same number sequence, who do you think is behind this? Your angels, of course!"

Your angels often communicate messages to you by showing you sequences of numbers. They do this in two ways. First, they subtly whisper in your ear so you'll look up in time to notice the clock's time or a phone number on a billboard. The angels hope you'll be aware that you're seeing this same number sequence repeatedly. For instance, you may frequently see the number sequence 111, and it seems every time you look at a clock the time reads 1:11 or 11:11.

The second way in which angels show you meaningful number sequences is by physically arranging for, say, a car to drive in front of you that has a specific license plate number they want you to see. Those who are aware of this phenomenon become adept at reading the meaning of various license plates. In this way, the angels will actually give you detailed messages. Here are the basic meanings of various number sequences. However, your own angels will tell you if your situation holds a different meaning for you. Ask your angels, "What are you trying to tell me?" and they'll happily give you additional information to help decode their numeric meanings.

111—Monitor your thoughts carefully, and be sure to only think about what you want, not what you don't want. This sequence is a sign that there is a gate of opportunity opening up, and your thoughts are manifesting into form at record speeds. The 111 is like the bright light of a flash bulb. It means the universe has just taken a snapshot of your thoughts and is manifesting them into form. Are you pleased with what thoughts the universe has captured? If not, correct your thoughts (ask your angels to help you with this if you have difficulty controlling or monitoring your thoughts).

222—Our newly planted ideas are beginning to grow into reality. Keep watering and nurturing them, and soon they will push through the soil so you can see evidence of your manifestation. In other words, don't quit five minutes before the miracle. Your manifestation is soon going to be evident to you, so keep up the good work! Keep holding positive thoughts, keep affirming, and continue visualizing.

333—The Ascended Masters are near you, desiring you to know that you have their help, love, and companionship. Call upon the Ascended Masters often, especially when you see the number 3 patterns around you. Some of the more famous Ascended Masters include: Jesus, Moses, Mary, Quan Yin, and Yogananda.

444—The angels are surrounding you now, reassuring you of their love and help. Don't worry because the angels' help is nearby.

555—Buckle your seat belts. A major life change is upon you. This change should not be viewed as being "positive" or "negative," since all change is but a natural part of life's flow. Perhaps this change is an answer to your prayers, so continue seeing and feeling yourself being at peace.

666—Your thoughts are out of balance right now, focused too much on the material world. This number sequence asks you to balance your thoughts between heaven and earth. Like the famous "Sermon on the Mount," the angels ask you to focus on spirit and service, and know your material and emotional needs will automatically be met as a result.

777—The angels applaud you, congratulations, you're on a roll! Keep up the good work and know your wish is coming true. This is an extremely positive sign and means you should also expect more miracles to occur.

888—A phase of your life is about to end, and this is a sign to give you forewarning to prepare. This number sequence may mean you are winding up an emotional career, or relationship phase. It also means there is light at the end of the tunnel. In addition, it means, "The crops are ripe. Don't wait to pick and enjoy them." In other words, don't procrastinate making your move or enjoying fruits of your labor.

999—Completion. This is the end of a big phase in your personal or global life. Also, it is a message to lightworkers involved in Earth healing and means, "Get to work because Mother Earth needs you right now."

000—A reminder you are one with God, and to feel the presence of your Creator's love within you. Also, it is a sign that a situation has gone full circle. ^{*24}

Then, with a few, there are moments—and with most these become less frequent or altogether cease with the passing of the years—when all is still, when time stops, it is not noticed; when no thing appears; sense-memory and the states of matter fade away; the world does not exist. Then the attention of the conscious something is fixed in itself; it is alone, and conscious. There is the miracle: Oh! it IS itself, the timeless, the true, the eternal! Within that moment—it is gone. Breath continues, the heart beats, time goes on, clouds enclose, objects appear, sounds rush in, and the conscious something is again conscious of the body with a name and of its relations to other things, and it is again lost in the world of make-believe. Such a rare and in-between moment, like an unrelated reminiscence, comes unannounced. It may happen only once or many times in a life. It may happen just before sleep at night, or while it is becoming conscious of waking in the morning, or it may happen at any moment of the day and regardless of whatever activities there may be. ^{*25}

Imagining Brilliant Light

BLP's humanity-friendly technology breaks through the barrier of the ego's spiritual unconsciousness.

Traditional gas fuel relies on a simple principle to produce light and energy: "Burn it."

Ever since 'the gods' gave man fire, he's been attracted to its nature. Whether kneeling by candles in church, sitting by a campfire, dynamiting a mine or firing canons at an enemy.

Burning wood, fire, coal, gas, and anything flammable, to produce heat, light, pressure, or explosions, as an outward expansion of light released from its trapped confines in matter.

The foundation of Newton's laws of mechanics are essentially driven by this concept of energy as trapped in matter, when released through physical conversion becomes a motion.

Throughout recent centuries, advancing knowledge of how to produce and control the energies these fuels release, provided mankind the ability to cook food, travel and fight wars.

By smelting ore, forming steel for weapons (and later machinery), melting of sand to create windows and mirrors of glass, firing a kiln to turn wet pottery into ceramics for civil use.

Industrialization was the outcome, once abundant sources of coal and oil became accessible and mankind's consciousness was able to unlock its potential power to modernize all.

The wooden sailboat became secondary to metal steam cargo ships for worldwide commerce, the horse gave way to the car with an engine producing much greater 'horse power'.

To travel somewhere in cars, for example, gas is injected into a combustion chamber, which when combusted, drives a mechanical piston, turning the car's wheels to create motion.

The more pistons, the bigger the chambers, and the more fuel injected, produces more power available to transport ever heavier loads, faster and farther (within mechanical limits).

It's through this burning of fuels principle that people of a modern civilization today can make use of highways to drive across countries, fly across continents, and take hot showers.

The 'fuel of civilization', enabled man to speed up travel across spaces, carrying all that he needed with him to survive his journey alive, causing time (and everything) to 'speed up'.

Faster and faster the more man became enamored with his accomplishments, the greater belief in his own power overcame the rational balance of his spiritual origin of God nature.

Eventually 'the gods' gave man electricity too, what used to be a lightning phenomenon of weather became an electrical current carried by wires to lighten a house using light bulbs.

To produce electricity, that same combustion engine principle is used to turn a DC power generator instead of a car's wheels, enabling energy to be produced in a portable package.

And on a larger scale, the fuel may be burned to generate heat to convert water to pressurized steam, then turning a turbine to produce electricity for utility or industrial applications.

This electricity, or simply 'high-speed light', has enabled man's civilization to try turning night into day, forever changing the tide upside down from natural laws of light on this planet.

This has led to his fervent belief of creating his own definition of heaven, by changing the world he lives in, transforming the elements of burning matter into any form he envisions.

The greater a man's belief in the control of nature's laws on this Earth, the more willing he is to live in opposition to God's original creation as a matter of pride to prove father wrong.

His rebellion is thus, the spark of the fire that ignites the fuel of combustible matter, which guides him otherwise blind into the darkness of unknown territory before him, without God.

And as long as this fuel keeps burning, will keep trying to find a way beyond perceived limits of this defined home boundary, until he may forever leave the confines of its limitations.

For over a century nothing has changed with this basic, fundamental principle of burning gas as an energy source, that's fueled the industrial revolution and transformed many lives.

Today, there remains enough fuel accessible above and below ground, tapped as natural gas, oil, coal, wood, and other varieties to empower his existence for generations to come.

The question is, what will alleviate his fears over his belief that one day he will die when these fuels eventually run out, and he is trapped wandering in the darkness without a light?

The answer is, to break through the walls of his own ego's perceptual limitations of survival, and embrace the life giving light which only God has provided him, without fearing him.

Man's ego, being fueled by fear, led to the atomic age of political powers fighting for mutually assured destruction between USA and the USSR by the threat of nuclear annihilation.

Nuclear energy, radiating and unseen except for disastrous consequences to life, is of origin beyond man's visible body sensors of the higher-frequency electromagnetic spectrum.

It is, without a doubt, the most powerful example of man's belief in being able to play God by himself, without spiritual restraint required by unconditional love to balance the divine.

Unleashed, as in an explosive bomb which burns everything within range of its wide blast radius, is an expression of man attempting to shine light upon all the darkness before him.

Thus, nuclear power, can be seen as the peak expression of man's education in the burning of matter to produce fire from fuel to empower his enlightenment from shadows unknown.

All of these things are what mankind has done with what 'the gods' gave to him: industrialized a civilization on the backs of wars fought by technology. But what of the light of God?

If the only option beyond matter is energy of a nuclear origin, with all of its pros and cons, that leaves man in the precarious position of wishing for science fiction's dream solutions.

Fusion power, for example, has been researched for decades without major significant progress measured in terms of being a commercially viable power source by proven results.

And other than dreaming of free-energy, which consumes many researcher's lives exploring concepts, most alternatives until now have failed to overcome the potential of gas fuel.

But is it really such a stretch of fantasy to believe God isn't man's enemy, that he could provide man a source of clean, safe, and reliable power which could be used to go beyond?

If so, then perhaps man's been going about finding the answer all wrong... Rather than rebelling against God, suffices to follow his wisdom, and return to the simplicity of creation.

For example, what gives birth to life, or an idea, or a solution to an unresolved problem? If your answer is a human, you're wrong. If your answer is "a flash," you may stop reading.

At the moment of conception, when a sperm enters an egg to impregnate it, a brief flash of light occurs, setting off the motions of events to follow, giving birth to a new living being.

Artificially, scientists can stimulate the growth of an egg into a biological form, by recreating the effect of this flash using low voltage electricity to zap the egg with, beginning its life.

The tiny voltage of electric light which flashes the egg, is similar to that of the human's operating body frequency. Too low, it won't trigger the mechanism. And too high, will burn it.

Similarly, in the first moment of a nuclear bomb detonation, a much more powerful brilliant light flashes from its origin, initiating a destructive sequence of intense, powerful events.

One can think of it in these terms, when giving 'birth' to human life, God provides only just enough light to begin the creation process, and letting biological nature follow its course.

The power of this light in God's realm, ranges all the way up to nuclear power and much, much farther beyond... Beyond any power we can fathom or imagine with a human mind.

But how can humanity then access some of this powerful light, without destroying itself and this planet in the process of its discovery, and illumination of its secrets from darkness?

Is it possible there's a simpler method available to humanity today, beyond the expensive complexity of science fiction and fantasy research, to provide for all of humanity's needs?

Perhaps, there's a kind of power that's far beyond the energy potential of fossil fuels, but not nearly as dangerous and destructive as nuclear, which could be safely harnessed by all.

A means of tapping into an invisible source, which produces a brilliant flash of light, so bright it's very hot, intense, and powerful, but doesn't carry radioactive terminal side effects.

Such a mechanism reproducing the same process by which the sun radiates light throughout the day, on the same measurable spectrum as the one in the sky, right here on Earth.

In other words, tapping into the source of divine light, by reaching beyond Newton's thought-limiting laws of energy as matter, to reproduce the sun's light usable inside a generator.

Thus breaking through the wall of material limitations by harnessing an unconditional source of infinite light and energy potential, allowing humanity to live without fear of survival.

Enter: Brilliant Light Power, Inc. founded by Dr. Randell L. Mills, and Sun Cell® technology.

Whether he realizes it or not, Dr. Mills' has tapped into the realm of divine light technologically, to a greater level of consciousness achieved by public sources of energy on the planet today.

His breakthrough has the potential to enable humanity to transcend the limiting beliefs associated with fear, anger, resentment, pride, shame, and guilt, amongst negative emotional traits.

Such traits are the root causes of competition, rivalries, war, instability, greed, violence, politics, reflecting man's expression to "burn" inside himself, as emotional fuel for his passions.

Perhaps this technology will enable man to reconnect with his divine nature, not fallen as a body, but a spiritual being capable of unconditional love, the source from which all light exists.

How does it work?

In principle it's simple: produce intense light/heat from a brilliant flash, convert it into electricity.

And repeat ad infinitum: flash > electricity > flash > electricity > flash > electricity > flash > etc.

In other words, generate repeat bursts of capture-able energy, and manage its continuous output.

It works in a similar manner as a gas powered electrical generator, by creating a continuous cycle of repetitive bursts, with each 'stroke' harnessing the result to produce current.

And just like RPMs of a gas engine, a Sun Cell® produces bursting cycles at repetitive frequency.

The difference is instead of mechanically driving a piston to rotate a shaft, this method functions without any mechanical parts, thus meaning it will run almost maintenance free.

The light resulting from these generated bursts, is converted using Photo-Voltaic (PV) cells, or the heat converted by Direct Power Extraction (DPE) of kinetic and thermal energy.

And, because its a closed loop system, doesn't suffer from typical weathering consequences upon mechanical engines, such as corrosion of parts, or failure by wearing pressures.

So how does a Sun Cell® produce the bursting flash which generates intense light and heat?

Here's the genius of it: a Sun Cell® uses molten silver (by turning it into liquid form using heat).

The molten silver circulates in a closed loop via magnetic pumps (reliable and proven technology), as two individual streams, which then collide with each other inside an empty dome.

Each stream is either positively or negatively electrified, which means that when the two streams collide in the dome, a controlled electrical current flows across the 'bridge'.

Electrical current reacting with the molten silver produces a brilliant flash of high-intensity light.

The molten silver is converted into fumes during this flash process inside the dome's chamber, and then recirculates by being recaptured into the molten stream as its fume cools.

In short: molten silver meets electricity inside a dome, produces bright light, vaporizing the silver, which then cools and returns into liquid form, to repeat the process again.

Wrapping the dome in photo-voltaic cells, as an early design proposed, enables the high-frequency light burst to be captured, and instantly converted into usable electricity.

A more recent advancement proposes using a direct power extraction method, to directly convert the heat produced from a conductive fluid into current using a heat exchanger.

The latter development suggests an 80%+ heat to electricity conversion ratio may be attainable, which would be a far greater ratio than one attainable using photo-voltaic means.
