

# Refinement [Rev. 20180812]

By J — Latest revision: <http://allis.foundation/Refinement.pdf>

## War Crimes to First Principles

The historical context of the EPA human experimentation scandal begins with the horrific human experiments conducted by the Nazis during World War II. These experiments included the secret administration of poisons to Buchenwald prisoners to see what would happen.

Twenty three Nazi doctors were subsequently tried by the Nuremberg war crimes tribunal in what is known as the Doctors' Trial. Among other crimes, the defendants were charged with performing medical experiments, without the subjects' consent.

Sixteen of the doctors were convicted of crimes against humanity. Of the convicted, seven were executed and the rest imprisoned. Among those executed was the chief doctor at Buchenwald.

As part of the verdict in the Doctor's Trial, the Nuremberg tribunal espoused its views on human experimentation. These views became known as the Nuremberg Code and they became the first generally accepted set of principles governing human experimentation.

The 10 points of the Nuremberg Code are:

1. **Voluntary and Informed Consent.** The voluntary consent of the human subject is absolutely essential. This means that the person involved should have legal capacity to give consent; should be so situated as to be able to exercise free power of choice, without the intervention of any element of force, fraud, deceit, duress, over-reaching, or other ulterior form of constraint or coercion; and should have sufficient knowledge and comprehension of the elements of the subject matter involved as to enable him/her to make an understanding and enlightened decision. This latter element requires that before the acceptance of an affirmative decision by the experimental subject there should be made known to him the nature, duration, and purpose of the experiment; the method and means by which it is to be conducted; all inconveniences and hazards reasonable to be expected; and the effects upon his health or person which may possibly come from his participation in the experiment. The duty and responsibility for ascertaining the quality of the consent rests upon each individual who initiates, directs or engages in the experiment. It is a personal duty and responsibility which may not be delegated to another with impunity.
2. **Beneficial and necessary.** The experiment should be such as to yield fruitful results for the good of society, unprocurable by other methods or means of study, and not random and unnecessary in nature.
3. **Anticipated Results Justify Experimentation.** The experiment should be so designed and based on the results of animal experimentation and a knowledge of the natural history of the disease or other problem under study that the anticipated results will justify the performance of the experiment.
4. **Avoid Unnecessary Harm.** The experiment should be so conducted as to avoid all unnecessary physical and mental suffering and injury.

5. **No Dangerous Experimentation.** No experiment should be conducted where there is a prior reason to believe that death or disabling injury will occur; except, perhaps, in those experiments where the experimental physicians also serve as subjects.
6. **Proportional Risk.** The degree of risk to be taken should never exceed that determined by the humanitarian importance of the problem to be solved by the experiment.
7. **Adequate Preparation and Facilities.** Proper preparations should be made and adequate facilities provided to protect the experimental subject against even remote possibilities of injury, disability, or death.
8. **Qualified Scientists.** The experiment should be conducted only by scientifically qualified persons. The highest degree of skill and care should be required through all stages of the experiment of those who conduct or engage in the experiment.
9. **Subject Freedom to Terminate Experimentation.** During the course of the experiment the human subject should be at liberty to bring the experiment to an end if he has reached the physical or mental state where continuation of the experiment seems to him to be impossible.
10. **Scientist Obligation to Terminate Experimentation.** During the course of the experiment the scientist in charge must be prepared to terminate the experiment at any stage, if he has probable cause to believe, in the exercise of the good faith, superior skill and careful judgment required of him that a continuation of the experiment is likely to result in injury, disability, or death to the experimental subject. \*1

# Drugs Help Explain Modern World

**So many behaviors you find strange become obvious when you understand drugs.**

Hollywood sets are "sexually charged" because they are all off their heads on Meth and cocaine.

In the old days—Julie Garland, Wizard Of Oz—they were all off their heads on benzedrine.

You could do a documentary on drug use by politicians, actors, armed forces etc...

Soooooooooooo many behaviors you find strange become obvious when you understand drugs.

When I went to night clubs, I could never understand people up all night and standing in the UTTER freezing cold in a tiny top and mini skirt seemingly unaffected by the weather. It was close time in 30 minutes but they kept lining up. Then I tried Meth for the first time in 1997 and then I understood.

Then Hitler raving on the podium and sweating like a pig onstage became clear. He was off his head on "Pervitan" - Meth. First synthesized by the Germans in 1932 and injected IV into Hitlers veins by Dr Morrel—a syphilis doctor and most likely jewish. For a man who hated Jews so much Hitler sure spent a lot of time surrounded by them, including his Jewish vegetarian cook. It will take another 50 years to unravel WW2.

Then watch Mussolini on the balconies raving—Meth! Completely off his chops and SOOOOOO obvious but I never saw a doco on it all till 2003.

Then all the crazy stuff Americans and Israeli's are doing. Thats METH! The Waffen SS lived on it. The British, Americans and Russians used Benzidrene.

Its worth several documentaries. This is why the German Army committed so many war crimes—they were off their heads on drugs most of the time. Three days of no sleep—revved up on Meth. This is where killing women and children becomes easy. Just ask the IDF who have one of the most massive drug problems of all the armed forces. They absolutely live on it. <sup>\*3</sup>

## The Third Reich Was Addicted to Drugs

You can learn a lot about a culture from its drug use. Robert McAlmon, an American author living in Berlin during the tumultuous Weimar years, marveled that "dope, mostly cocaine, was to be had in profusion" at "dreary night clubs" where "poverty-stricken boys and girls of good German families sold it, and took it." Cocaine was banned in 1924, though few people noticed—use peaked three years later. For those who preferred downers, morphine was just as easily accessible. Pharmacists legally prescribed the opioid for non-serious ailments, and morphine addiction was common among World War One veterans. The market was bolstered by low prices—for Americans, McAlmon noted that enough cocaine for "quite too much excitement" cost about ten cents—and by the fact that production was more or less local. In the 1920s, German companies generated 40 percent of the world's morphine, and controlled 80 percent of the global cocaine market.

When the Nazis rose to power, illegal drug consumption fell. Suddenly, drugs were regarded as “toxic” to the German body, and folded into the escalating discourse of anti-Semitism. Users were penalized with prison sentences, and addicts were classed—along with Jews, gypsies and homosexuals—as undesirable social elements. By the end of the 1930s, pharmaceutical production had pivoted away from opioids and cocaine and towards synthetic stimulants that could be produced entirely within Germany, per Nazi directive. The transition from cabaret cocaine to over-the-counter meth helped fuel what German journalist Norman Ohler in his new book ... calls the “developing performance society” of the early Nazi era, and primed Germany for the war to come.

The breakthrough moment came in 1937, when the Temmler-Werke company introduced Pervitin, a methamphetamine-based stimulant. (The doctor who developed it, Fritz Hauschild, would go on to pioneer East Germany’s sports doping program.) Within months, this variant of crystal meth was available without a prescription—even sold in boxed chocolates—and was widely adopted by all sectors of society to elevate mood, control weight gain, and increase productivity. It’s impossible to untangle Pervitin’s success from Germany’s rapidly changing economic fortunes under the *Third Reich*. As the country rebounded from economic depression to nearly full employment, marketing for Pervitin claimed it would help “integrate shirkers, malingerers, defeatists and whiners” into the rapidly expanding workforce. Students took it to cram for exams; housewives took it to stave off depression. Pervitin use was so common as to be unremarkable, a feature of life in the early Third Reich.

Meanwhile, in the military, Pervitin was enthusiastically embraced as the vanguard of the so-called “war on exhaustion.” As Hitler’s troops began annexing territory in the spring of 1939, *Wehrmacht* soldiers started relying on “tank chocolate” to keep them alert for days on end. Though Nazi medical officials were increasingly aware of Pervitin’s risks—tests found that soldiers’ critical thinking skills declined the longer they stayed awake—the short-term gains were appealing enough. Even after drug sales to the general public were restricted in April 1940, the German Army High Command issued the so-called “stimulant decree,” ordering Temmler to produce 35 million tablets for military use.

With the war ramping up, the reason behind this decree would soon become clear. A month later, on the night of May 10, 1940, more than 40,000 army vehicles amassed near the German border with Luxembourg for a daring advance that would take them through the Ardennes forest and across the French border in a single push. In preparation, thousands of soldiers were given Pervitin:

Twenty minutes later, the nerve cells in their brains started releasing the neurotransmitters. All of a sudden, dopamine and noradrenalin intensified perception and put the soldiers in a state of absolute alertness. The night brightened: no one would sleep, lights were turned on, and the ‘Lindworm’ of the *Wehrmacht* started eating its way tirelessly towards Belgium...

Three sleepless days later, the Nazis were in France. The stunned Allies were closer to defeat than they would be at any other point during the war. As Ohler writes in *Blitzed*, the Germans had claimed more land in less than a hundred hours than they had over the entire course of World War One...

Aside from power and prestige, there were lucrative reasons for men unconcerned with morality to work for the Third Reich. Before becoming Hitler’s physician, Morell made a name for himself in the emerging field of vitamins, becoming one of the first doctors in Germany to promote them as medicinal. Following his appointment, Morell used his role to develop his vanity vitamin business, enlisting Hitler as his “gold standard” patient...

Pervitin, Eukodal, and other “wonder drugs” of the time were seen as the magic bullets that would allow German productivity to reach new heights, German soldiers to march farther, stay awake longer, and, ironically, cleanse the country of its toxic elements. It was only later, Ohler notes, that the effects would become clear:

Studies show that two thirds of those who take crystal meth excessively suffer from psychosis after three years. Since Pervitin and crystal meth have the same active ingredient, and countless soldiers had been taking it more or less regularly since the invasion of Poland, the *Blitzkrieg* on France, or the attack on the Soviet Union, we must assume psychotic side-effects, as well as the need to keep increasing the dosage to achieve a noticeable effect.

As it became obvious the Nazis were going to lose, military efforts became increasingly desperate, and life was cheaply traded for grasping attempts at victory. Teenage recruits were dosed with amphetamines and shipped to the front; Navy pharmacologists tested dangerous mixes of high-grade pharmaceuticals on pilots. At a wine bar in Munich, Ohler meets with a Navy official who tells him how in the final months of the war, members of the Hitler Youth were loaded into mini-submarines and sent to sea with not much more than packets of cocaine chewing gum.

The last days of the Third Reich were marked by a combination of delirium and exhaustion. In January 1945, with the Russians and Allies closing in, Hitler was transferred to an underground bunker beneath the Reich Chancellery. By that point, his addiction and physical deterioration were apparent: He was barely able to sleep or focus, and was regularly receiving Eukodol injections for painful constipation and seizures. Or, at least he had been—in the weeks leading up to the new year, the British bombed the pharmaceutical companies that manufactured Eukadol and cocaine, threatening Hitler’s supply. In the months that followed, his reserve of drugs drawing down, he likely went through a brutal withdrawal. He sacked Morell on April 17, and two weeks later, shot himself.

... He only briefly touches on drug experimentation in concentration camps, and doesn’t explore the structural ties that existed between the Third Reich and German pharmaceutical companies, which would come to light during the Nuremberg Trials. Without these relationships, it’s unlikely the German war machine would have run for as long as it did. After supporting the Nazis’ rise to power, pharmaceutical conglomerate I.G. Farben developed the nerve gas used in the camps, and produced oil and synthetic rubber for war efforts. In 1942, Farben set up Auschwitz-Monowitz, a smaller concentration camp within Auschwitz, to provide slave labor for the company’s nearby industrial complex. Tens of thousands of inmates died as a result of experimentation and forced labor, and the development of thalidomide, notorious for causing deformities in fetuses, has been linked to Monowitz.

Ohler also doesn’t mention that the amphetamine craze didn’t only happen in Germany. While Germans were dosing with Pervitin, British and American troops were doing the same with Benzedrine, an amphetamine developed in the ‘30s as the first prescription anti-depressant. (Benzedrine was the ancestor of medications now prescribed for attention-deficient disorder.) The Germans eventually decided to drop Pervitin as the war dragged on, but the American military stuck with “bennies,” and by the end of 1945, production was up to a million tablets a day.

The notion that substances play an outsized role in shaping society—and especially during wartime—does not just belong to history. Amphetamines still factor heavily in conflicts in Syria (Captagon), Afghanistan (Dexedrine), and West Africa (cocaine mixed with gunpowder). Thanks to pharmacological advances, we’re now more able than ever to grasp how drugs may have altered behaviors and influenced certain moments. Knowing that Eukadol and Pervitin contributed to the grotesqueries of Nazi military strategy, for instance, places a new lens on a disturbing chapter of history. <sup>\*4</sup>

## America's Enemies Within

My deep desire is to alert my son, daughter, and other non-political hard-working Americans of the moral, spiritual, and cultural evil threatening to overtake our great nation. No longer are we simply engaged in a battle of ideas—Republican vs. Democrat, liberal vs. conservative. America's choice of governing has become far more daunting—light vs. darkness, good vs. evil. “Choose ye this day, whom you will serve.”

Despite Leftist merchants of evil using big words and arrogant condescension to convince us that morality is relative, we instinctively know some things are good and some things are bad. Equally annoying is Leftists' air of superiority—claiming to care more than us commoners about equality, saving the planet and all life; their evil intentions hidden beneath a shroud of faux compassion.

Leftists have what I call their no-pictures-please policy. They get fuming mad whenever anyone accurately describes, visualizes, or shows pictures of procedures and behaviors the Left has demanded that Americans embrace. For example: Leftists want women to freely kill their babies all the way up to moments before birth. The last thing they want the public to see is video of the partial birth abortion procedure.

Yes, I am unequivocally saying liberals/Democrats (Leftists) are forcing their evil agenda down America's throat. “Forcing” is exactly what the Left is doing. Americans typically vote against Leftists' desire to make abhorrent behavior mainstream and transform America into a welfare state. Leftists send in their activist judges to overturn the will of We the People. After verbally slapping us around calling us racist, sexist, and homophobic, Leftist judges make what the people voted against into law.

“For we wrestle not against flesh and blood... against spiritual wickedness in high places.”

... I rest in the knowledge that surrendering to evil is the only way we fail. \*5

# The Downside of Society

Although the consciousness level of America is currently [2005] at 421, approximately 49 percent of the population calibrates below 200. The 51 percent above 200 represents the solution, and the 49 percent 200 represents the problem. To facilitate a discussion of the downside, calibrations have been roughly grouped as antisocial/behavioral, criminal, and espionage, although it is obvious that there is considerable overlap among all three.

## Antisocial

Anti-Semitism	155	Motorcycle Outlaw Gangs	140
Corporate Fraud	160	Perpetrators of Internet Worms and Viruses	85
Drug Traffickers (street)	55	Petty Thievery	145
Homeless Street People	95	Pickpocket	175
Inner-city Street Gangs	125	Prostitution	140
Internet Hackers	145	Racist Hate Groups	150
Internet Porn (Adult / Child)	75 / 60	Slavery	20
Laser Beam Blinding of Pilots	80	Vandalism	175

Many in this group derive a sense of importance through deviant behaviors. However, their cost to society is enormous, as in the case of Internet hackers and those who plant destructive Internet viruses that cost the economy millions of dollars as a consequence of their self-indulgence.

The subcultures of street and motorcycle outlaw gangs are well-studied sociologically and represent a subculture in which status is derived from being perceived as being "bad". They achieve additional status from media depictions of them as glamorized folk symbols, e.g., "the wild and free," devil-may-care stereotype. This follows the macho image that courage means the capacity to flirt with danger and thus demonstrate courage.

Racist hate groups, including anti-Semitic, anti-Black, and white supremacist groups have a long history in the United States, of which the Ku Klux Klan is the most flagrant example. They demonstrate a dualistic split in the psyche and the projection of self-hatred onto subgroups. This is also based on inner inferiority. People with adequate self-esteem have no need to hate others.

Slavery can be understood only in its historical context. For thousands of years, it was an accepted worldwide lifestyle, and in the days of ancient Rome, slaves outnumbered free men by ten to one. Slaves from that culture entered all levels of society. The caste system in India prevailed for thousands of years and was an established way of life there as well as in North Africa (Arabic Sudan until the present time...).

Historically, the west coast of Africa lacked any marketable commodity or basis upon which to build an economy. The tribal chieftains raided other tribes, and the captured people were then marketed at seaports for an already active slave trade. Paradoxically, this was an evolutionary improvement because, prior to that, they were simply slaughtered. All the barbarian groups that invaded Europe for centuries, such as the Vikings, made the same discovery and also sold off some of the captured instead of massacring them. Consequently, slavery was worldwide and constitutes part of the cultural background of all ethnic groups alive today. It slowly lost impetus and died out

with the end of colonialization, and in America, it came to a dramatic end with the Civil War. Only very recently, in 1962, did the very last country make slavery illegal (at the urging of President John F. Kennedy).

Although seen as an injustice in today's world, over the course of cultural and social evolution, it was merely a transitory phase. Thus, slavery is not intrinsically an ethnic issue although it always has had ethnic expressions. An unseen benefit of slavery in America's history was that the lifespan of American slaves was twice that of the native Africans who remained in their original communities and were subject to tribal warfare.

Homeless street people are a conglomerate of the impaired from various strata and are well-studied sociologically. Their numbers greatly increased as a result of the closing of the state hospital system, which had provided a safe haven for many of the mentally disabled in a protective environment where they were accepted, understood, and provided with a home, sustenance, medical and dental care, as well as appropriate psychiatric services, psychologists, group therapists, social workers, and case workers. The old state hospital was an established subculture that calibrates as integrous at level 215. Its demise was considerably the consequence of the movies, *One Flew Over the Cuckoo's Nest* (cal. 180) and *The Snake Pit* (cal. 150), which represent distortions that have had a major downside that was accelerated by the spurious notion that mental illness is a "myth" (cal. at 110...).

### Behavioral

Child Abuse	140	Stalker	60
Wife Beater	95	Sexual Sadist	35
Pedophilia	65	Sadist Child Pornographer	5

These disorders result from a variety of psychiatric, genetic, neurological, and psychological pathologies. These people tend to be obsessive and are characterized by chronic resistance to insight or the need for treatment. They are therefore psychopathic in quality. In treatment, people with these disorders are seen as recalcitrant, unmotivated, and adept at deception and "dissembling" (pretending normalcy). Although addressed by the criminal court system and incarceration, these disorders usually recur upon discharge from prison, e.g., the famous, grotesque Singleton case. There appears to be little motivation for recovery, except in those who choose faith-based 12-step programs and stay involved with them after discharge. Note that faith-based treatment programs are under political attack by the same group that supports the "rights" of pedophiliacs. Interestingly, if the boys who are seduced and raped were girls, the predators would be guilty of statutory rape. (Who pays for the boys' surgical repairs and AIDS treatment?)

Pedophilia is a form of obsessive-compulsive disorder, accompanied by psychopathic trends. Those who are arrested for a supposedly single incident typically have previously molested hundreds of children and continue to do so after their release from prison. The adequate treatment of this condition is an area of civil rights discussion, which can be summarized as the difficulty of balancing the civil rights of the innocent victims against the perceived civil rights of the perpetrator. Similar discussions arose in past decades about persons who had active-infection tuberculosis and refused to respect the rights of others. The arguments involve the basic concepts of triage, which also come up in the military when the survival of one soldier is weighed against the life of an entire regiment, or whether a ship and its crew should be sacrificed to save one seaman who has fallen overboard.

### Overt Violence

Anti-abortion Violence	90	Public Riots	80
Arson	10	Serial Child Killers	5
Ecoterrorism	160	Shoe Bomber	120
Infanticide	60	Teenage Classmate Killers	35
"Just Snapped"	140	Terrorism	10-35
Political-Protest and Public-Building Bomber	35-60	Islamic Terrorists	35-70
Public Beheading of Captives	20		

The killer instinct is in the most repressed, hidden recesses of the ego (Freud's "Id"), which is the level of killing for the love of violence for its own sake, i.e., without psychological premises, as the act itself is its own source and fulfillment. Historically, it is seen in the "berserk" activity of the Viking conquerors who slaughtered people needlessly; in the Japanese in the 1930s; and in the concentration camps of World War II. It is simultaneously the extreme of megalomania/egocentricity (malignant narcissism) unleashed by brainwashing, inflammatory political rhetoric, or religious zealotry (cal. at 80).

Arson has been included with behavioral disorders because it is also compulsive and repetitive. Whereas teenage classmate killers can be triggered by having been abused or bullied, the basic psychopathology is actually intrapsychic ... and not "caused" by external factors. The intrinsic factor is narcissistic grandiosity and contempt for "inferiors." The same psychopathology is seen in gangster rappers to whom normal people are "scumbags" or "whores." In addition, there is another personal element contributed by violent video games that, by Pavlovian conditioning (i.e., kill—reward), results in desensitization and a trance-like automaticity in which the behavioral conditioning translates into acting out behaviors to "see what it's like."

It is significant that 65 percent of the population suffers from various degrees of PTSD (Post-Traumatic Stress Disorder) as a consequence of television and movie violence. A memorable example was the post-*Psycho*-movie (cal. 80) syndrome. Multitudes of people were afraid to take showers alone in the home for years afterward, and everybody locked their bathroom doors. (PTSD is characterized by fearful flashbacks.)

## Drugs and Alcohol

Alcohol Addiction	90	Drunken Driving	55
Cocaine	7	Heroin	6
Drug Addiction	95	Methamphetamines	6

In the past, these were completely hopeless and untreatable conditions because they are not only psychological and behavioral, but physiological as well. From a medical viewpoint, true addiction is denoted by withdrawal symptoms. Psychological addiction, such as dependence on marijuana, lacks physical withdrawal symptoms. Opiates are addictive even to brain cell neurons that are raised in a laboratory culture medium. When the addictive substance is removed from the culture medium, the neuron shrivels and dies.

Psychologically, the addictions fall into two somewhat different classes—those of the sedatives, such as alcohol, heroin, barbiturates, and tranquilizers—and those that are excitatory, such as amphetamines and cocaine. The sedative disorders have only been recoverable since the advent of Alcoholic Anonymous, which is the offshoot of the transformative spiritual experience of its founder, Bill Wilson. The movement is now spread out across the world.

(AA calibrates at 540.) The addictions are so severe that reason, which calibrates in the 400s, has insufficient power and is only offset by the energy field that calibrates at 540. Upon analysis, the addiction is to the artificial consciousness level that characterizes the “high” that is experienced due to the drug’s effect of blocking out the lower levels of conscious experience. By following the 12-step program, people progressively relinquish the ego, which is replaced by spiritual energy that is maintained by following a spiritual program of proven value.

### **Severe Behavioral/Psychiatric Disorders**

Borderline Personality	65-150	“Possessed” / Psychotic Murderers	5-11
Psychopath	45-60		

These involve psychotic levels of mental impairment, with transitory periods of quasi-normal behavior. In the borderline personality disorder, the hold on reality is tenuous, and psychological conflict triggers regression to more extreme and severe states of emotionality under even very slight provocation.

“Possessed” murderers are a class unto themselves. Many of them hear voices or God telling them to kill themselves or others and involve paranoid psychosis. The psychopathic disorder is relatively well-known as a lack of conscience that typifies the classic “con” man and the sociopath of criminal subcultures. In psychiatry, these are technically classified as character disorders, or “dysocial,” if they are primarily a response to cultural conditions (e.g., street gangs).

### **Personality Disorders**

According to the most recent National Institutes of Health survey, approximately 15 percent of U. S. adults (31 million) have diagnosable personality disorders as follows:

Obsessive-Compulsive Disorder	7.9%	Schizoid Disorder	3.1%
Paranoid Disorder	4.4%	Histrionic Disorder	1.8%
Antisocial Disorder	3.6%	Dependent Personality Disorder	0.5%
Avoidance Disorder	4.9%		

All of these psychological diagnoses are associated with considerable emotional, social, and occupational impairment and interpersonal conflicts, as well as deviant attitudes and belief systems (2002 National Epidemiological Study, NESARC Report, 2004).

### **Criminality**

Present Inmate Population — Average Group Calibrations:

Federal	60	County	65
State	65	Death Row	20

### **Criminals**

Bonnie and Clyde	22	Jack The Ripper	6
John Dillinger	160	Serial Killers	6-15
Al Capone	35	“Starkweather”-type Killers	6
“Baby Face” Nelson	60	Organized Crime	40
“Machine Gun” Kelly	55	Blackmail	35
Bruno Hauptmann	50	Pimp	14
Nathan Leopold / Richard Loeb	25	Carlos The Jackal	35
Mafia	65	Major Serial Murderers	5
Drug Traffickers (organized crime)	60	Jack Ruby	170
Bank Robbers	55	Lee Harvey Oswald	170
Ma Barker	40		

The extremely low calibration levels indicate primitiveness and the predominance of animal instincts, thus representing a maturational arrest of the evolution of consciousness. Some become perceived in a pseudo folk-hero kind of distortion. In reality, they are, as the calibrated levels indicate, deadly killers, whether they are stylized as Machine Gun Kelley, Scarface, the Godfather, Babyface Nelson, Liberators, etc. In more ethical conservative cultures, the media would not glamorize such criminals nor would entertainers gain social status by associating with them. Media hype contributes to the attraction of the criminal lifestyle for impressionable “wannabe” adolescents and gives a stamp of approval to serious deviancy.

Research on the assassination of President John F. Kennedy reveals three shots fired, two shots hit, one by Lee Harvey Oswald, and the other by an accomplice from the “grassy knoll”.

The psychopath lacks a conscience and thus is capable of fooling even a so-called lie detector that triggers the anxiety that would arise from deception in a normal person. With no conscience, there is no sense of guilt as moral, ethical, and spiritual values are absent. A century ago, the formal psychiatric diagnosis was “Moral Imbecility” (cal. 90).

### ***The Nature of Criminality***

It is unlikely that a cure can be found for any human ailment without accurate diagnosis and elucidation of the underlying pathology. Nowhere is this more apparent than in the world's failure to comprehend the essential nature of criminality and its expression on the international level as war. The application of consciousness research elucidates basic elements that are not otherwise observable, including essential characteristics to which society habitually turns a blind eye.

Clarification first requires a differentiation of violations of the law from crime and criminality. A violation of the law is a legal and moral issue and includes a high proportion of relatively “normal” citizens of any country. These violations are transitory and often due to immaturity, opportunity, carelessness, neglect, ignorance, lack of attention, lack of acculturation, transitory illness, physical and mental impairments, age, and distraction by other affairs or temporary conditions, such as marital strife, loss of a job, or simply the lack of education.

On a more serious level is the subject of true crime, which may be temporary or isolated and due to emotional pressure, intoxication, provocation, personality defect, lack of inhibition, instability, financial pressures, lapses of

conscience, or something as simple as thrill seeking or “falling in with bad company.” In the case of “violations of the law” and “isolated crimes,” it is presumed that the perpetrator is of normal mental and emotional capacity and that fines and jail time will bring these violations or crimes to a halt.

Criminality, however, is of a different nature altogether and akin to a disease. Essentially, it is a chronic, serious mental disorder that has emotional, behavioral, and psychological characteristics. In addition, there is often a genetic impairment of adequate development of the frontal cortex of the brain... Criminality has a childhood onset characterized by the inability to delay gratification, the lack of capacity to foresee or fear consequences, the lack of concern for others, and a narcissistic core of egocentricity. Psychological research reveals that it is often diagnosable by age three.

Rather than the erroneously hypothesized low self-esteem, on the contrary, criminals have an exaggerated, inflated, grandiose, and egoistic sense of self-importance. There is a denial of personal responsibility, along with impulsivity and lack of conscience, guilt, or remorse. It is a pervasive lifestyle characterized by a narcissistic lack of concern for the rights of others or the incorporation of society's values, such as morality or ethics. In Freudian terminology, there is a lack of superego development and a failure to introject and identify with an adequate authority figure.

In addition to the above, there is often a verbal faculty characterized as glibness as well as impulsiveness, the inability to learn from experience, emotional instability, and a proclivity and attraction to crime, drugs, and sensationalism. The lack of incorporation of social values and the respect for authority are expressed as defiance, impulsiveness, and narcissistic egocentricity. Psychiatrically, they are often diagnosed early in life as having Oppositional Defiant Disorder or Conduct Disorder, with psychopathic or sociopathic trends.

The early childhood symptoms of some forms of this chronic mental disorder are often characterized as the triad of fire setting, cruelty to animals, and enuresis (persistent bedwetting past the expected age of control). There is a proclivity to prevarication and being a “pathological liar,” with an impaired sense of reality and capacity for comprehension. Some become convincing fabricators and invent believable stories by which they often accuse innocent people whose lives are thereby destroyed. This is one situation in which the calibration of truth can be crucial, as the false accusers are quite often convincing to authorities. Because of the commonness of false accusations, male personnel in adolescent treatment centers are fearful of being alone with any female patient for even brief moments. The residents know only too well the disastrous impact of accusations that are often due to malicious spite resulting from perceived slights to the inflated narcissism.

Recidivism is associated with the inner grandiosity and attraction to thrills, danger, excitement, and a denial of reality, which are seen as obstructive to the inner infantile omnipotence. These characteristics lead to chaotic marital and family situations, and chronic school and behavioral problems. These individuals frequently become dropouts and join gangs and antisocial countercultures. Most true criminals have a long “rap sheet” that goes back to childhood. Seventy-five percent of discharged felons are back in prison within three years.

Youth violence, as reported by a current, ongoing study by the National Institutes of Health... is characterized in early childhood by low I.Q., delayed speech development, lower resting heart rate, genetic factors, negative emotions, lack of sympathy for others, disrespect for rules, unreliability, carelessness, aggression, attraction to antisocial and violent behaviors, plus cerebral neurotransmitter (metabolites of Serotonin) abnormalities triggered by childhood abuse.

Early in their lives, psychopaths are often referred for psychiatric treatment, which is found to be useless and ineffective. Occasionally, there is improvement because the disorder is sometimes associated with bipolar disorder;

ADHD, addictions, or borderline or explosive personality disorders. The lack of response to psychologically-based treatments has to do with the inner defects in ego formation as well as the absence of the capacity for love or compassion. In psychoanalytic terms, they lack the ability to form a positive transference to the therapist.

In society, the career of the criminal is reflective of their socio-economic status. On the lowest level, they become members of criminal gangs. The more erudite become con men, and some are members of subcultures, such as the Irish travelers, the Chicago gangs of the prohibition era, or the drug dealers of today's culture. Psychopaths who have come from higher socio-economic levels often are more socially adept and become white-collar embezzlers or unethical CEOs of large corporations and get involved with stock fraud. Some learn how to set up shell corporations, Ponzi schemes, and pseudo charities, or they become manipulators of the stock or commodities markets. Some become adept at politics and enter government where they become corrupt officials. When psychopathy is limited primarily to sexuality, pedophiles infiltrate religious or youth organizations to which they are attracted by the availability of victims. They wear the sheep's clothing of the cleric, scout leader, coach, camp counselor, etc. Diagnostically, all the above-cited examples calibrate below 200, a serious warning sign. Psychopaths characteristically do not admit guilt even when caught red-handed or photographed on videotape.

The dual-personality criminal is often unsuspected unless it is held in mind as a possible explanation for puzzling cases that include a subordinate psychopathic personality camouflaged by a seemingly normal, respectable persona. The two personalities may be completely split and even unknown to each other (see later). The normal personality protests its innocence because it is actually unaware of the split-off, depressed criminal personality.

From the above classifications, it can be seen that it is important to correctly diagnose the violator of the law instead of lumping all violators together, which is obviously doomed to failure, as it would be in medicine where effective treatment is completely dependent upon a correct initial diagnosis. The normal person who violates the law responds to consequences such as fines or probation, or, in more severe cases, imprisonment. The normal violator of the law also responds to education, such as a required driving re-education course or restriction of a driver's license. The normal person is also inhibited from further violations by shame, guilt, remorse, public disgrace, fear of consequences, and fear of loss of social and self-esteem.

True crime implies a more serious violation, and here again, the diagnosis is critical. The question to be answered is whether or not the basic personality is psychopathic or relatively intact. The law historically differentiates crimes of passion, crimes committed under the duress of financial crises, and passing life situations. Both the violator of the law and the normal person who commit a crime are responsive to therapeutic techniques of group or individual psychotherapy, psychiatry, philosophical re-education, counseling, faith-based programs, or reacculturation. This is an area where anger management classes, referral to 12-step programs, probation, and supervision do eventually bring about amelioration. Again, it is critically important to make a correct diagnosis because the application of consequences or therapeutic attempts is usually ineffective if the underlying personality of the perpetrator is sociopathic.

Criminality is an established recidivist lifestyle for which no effective therapeutic endeavor has thus far been found. The basic personality is unchanged, and, with experience, the perpetrator does not change the behaviors but becomes more clever in learning how to escape detection.

To a person with normal psychological makeup, a prison sentence is frightening. The culture is foreign and brings up guilt, fear, and aversion to the prior behaviors. These responses are totally lacking in the psychopathic personality to whom prison life is a very familiar culture; the individual is merely removed from the streets to another location and

continues uninterrupted. The basic tenets and lifestyle of criminality are actually the internal rules of conduct within any prison's population and are attenuated in their expression merely by the threat of the prison administration.

In the prison population, the gangs maintain control just as they did on the streets, and in order to survive, the prison inmate quickly learns how to play the game. To the psychopath, time in prison has no impact on subsequent behaviors other than a refinement of cleverness.

The calibrated level of the psychopathic personality of the typical criminal recidivist is generally between 35 and 80 on the Scale of Consciousness. So far, criminality has failed to respond to any therapeutics or course of techniques, and thus, society can only respond by maneuvers to protect itself as best it can, i.e., quarantine in prisons. Because the psychopath scorns rules and regulations, even those that would be called "common sense," the police detain citizens for what seem to be minor infractions because they know that the psychopath is irresponsible as a lifestyle. Thus, stopping cars for having a taillight out brings a high capture rate of criminals who are wanted for more serious crimes. This is the wisdom of the "three strikes and you're out" legislation that has been demonstrated to be highly effective in taking the criminals off the streets, resulting in the reduction of over 50 percent of street crime.

It is naïve to look at such laws with the sentimentalism that "it is unfair to put somebody in prison for stealing a pack of cigarettes." The facts reveal that the chronic criminal has been caught for maybe only 1/100th of the number of crimes they have committed. The typical pedophile has usually abused scores and in some cases even hundreds of victims before arrest and detection. The car thief has stolen hundreds of cars before finally getting caught. The domestic abuser has been violent dozens of times, and the chronic thief has stolen thousands of items, etc.

Due to legalities, the courts, together with defense attorneys, preclude a presentation of the defendant's past history to the jury whose capacity for balanced judgment is therefore impaired by the deliberate withholding of critically important information. The diagnosis is completely different between the recidivist and the opportunistic perpetrator of a crime under duress or temporary weakness of personality. The "one size fits all," strictly punitive approach is only effective with persons who are basically psychologically intact and have fallen into deviant behavior but are able to learn from their mistakes. For some such fortunate individuals, incarceration is the experience that brings about the critical "hitting bottom." Many such people do go through major turnarounds and become model citizens and spiritually oriented.

When it is realized that psychopathic persons are unable to help themselves and that no effective treatment is available, a compassionate view incorporates the realization that while the psychopaths are perpetrators, at the same time, they are victims of their own condition. The evolution of their consciousness is primitive and seems to be arrested at the predatory-animal level. Other than quarantine, society has no other solutions as yet.

### **Espionage and Political Criminality**

Ethel and Julius Rosenberg	175	Los Alamos Defectors-Manhattan Project	80
Walker Family (Navy spies)	120	Double Agents	130
Harold Philby	120	Alger Hiss	205↓160
FBI and CIA Moles	110-175	Robert Hanssen (spy)	80
Aldrich Ames	105	Ethel and Julius Rosenberg	175
The Cambridge 5	75		

This group is unique and includes the combinations of greed, pseudopolitical rationalization, character defect, defective conscience, and the capacity for psychological compartmentalization (which is also seen in some serial killers, especially those who kill sequential spouses and lead an ostensibly normal lifestyle in the interim).

Along with these defects, there is an accompanying intellectualism. The defectors who revealed the atomic bomb secrets considered themselves to be the intellectually superior elite and their actions thereby excusable as a consequence of their capacity for rationalization. Although “ethics” was an essential element of discussion of the morality of the development of nuclear fission, individuals with intellectualized grandiosity rationalized their behaviors, which were actually examples of deception as demonstrated by the calibrated levels of their consciousnesses. If their erudition were truly superior to the rest of mankind, then their consciousness calibrations would have been in the high 400s or the 500s.

IN THE UNITED STATES DISTRICT COURT FOR THE EASTERN DISTRICT OF VIRGINIA  
Alexandria Division

SENTENCING MEMORANDUM

“Robert Philip Hanssen is a traitor. For all the words that have been written about him, for all the psychological analyses, the speculations about his motivation, and the assessments of his character, this is, at the end of the day, all that really warrants being said about Hanssen. He is a traitor and that singular truth is his legacy.

“He betrayed his country” and he did so at a time when we were locked in a bitter and dangerous cold war with the Soviet Union. Hanssen’s brazen and reckless misconduct, its surpassing evil, is almost beyond comprehension. Using the very tools he acquired as an FBI counterintelligence expert, he covertly and clandestinely provided the Soviet Union and then the Russians information of incalculable significance, extraordinary breadth, and exceptionally grave sensitivity. He did so knowing that his disclosures could—and ultimately did—get people killed and imprisoned, and he did so knowing that they placed in jeopardy the safety and security of our entire nation.<sup>1</sup> That we did not lose the Cold War ought blind no one to the fact that Robert Philip Hanssen, for his own selfish and corrupt reasons, placed every American citizen in harm’s way.”

<sup>1</sup> All one has to do is look at the descriptions of some of the documents he compromised to the Soviets.

See, e.g., Count 8 (“A TOP SECRET United States intelligence analysis of the effectiveness of Soviet intelligence collection efforts against certain United States nuclear weapons capabilities...”) and Count 12 (“A highly restricted TOP SECRET/SCI Analysis, dated May 1987, of the Soviet intelligence threat to a specific and named highly compartmented United States Government program to ensure the continuity of government in the event of a Soviet nuclear attack...”) (Court’s Notes)

(From FindLaw.com)

So much for the posture of “moral superiority” favored by the Far Left as a smoke screen.

The puzzlement about Alger Hiss is clarified by the discovery that he had double compartmentalized personalities. One calibrates at 205 (public image) and the other at 160 (the conspirator). This condition is more common than suspected in espionage agents and in other cases of duplicity.

Because such individuals are of extreme danger in today's nuclear world, which is also beset by terrorist bombers, their early detection by routine consciousness calibration screening of high security risks is critical to security. High-profile defectors, as well as others, were already detected in the early 1970s by consciousness research and demonstrated on videotape... At that time, moles in both the CIA and the FBI were identified by calibration as to their level of consciousness. At the time, there was no point in pursuing their exact identities, which could have been easily revealed upon investigation in a matter of minutes. They were later exposed and made the headlines (Robert Hannsen and Aldrich Ames).

While dual compartmentalized personalities are recognized in psychiatry, this relative rarity (dissociative states, multiple personality disorder) obscures their detection in the public arena. Each of the double agents (Manhattan Project, FBI, and CIA) was responsible for the deaths of very many people, despite their claims to superiority as a rationalization for their duplicitous treachery. (The whole Cold War, as well as the current nuclear arms race, arose from the loss of atomic secrets to the former U.S.S.R.)

Detection of this disorder is difficult because the covering normal personality is what is presented to the public. Typically, the deception is expertly and successfully carried off for years without eliciting suspicion. The disorder is seen in the normal family man who has a secret sex life, in pedophiliacs and serial murderers, and in fire fighters who are secretly pyromaniacs. These are real-life Jekyll-and-Hyde personalities.

Compartmentalized dual personalities often arise in the media as high-profile cases that puzzle the public, the Court, and the jury. The crime is "out of character," as they are described as "normal," if not "just wonderful people." (Character witnesses confirm that they are "wonderful.") The position of the defense is, how could such a person possibly have committed such a crime? During the trial, the respectable, seemingly normal suspect characteristically has mask-like facial control, primarily emotionless and carefully guarded. Normal people with nothing to hide would automatically show a whole panoply of emotions, facial expressions, body language, etc. The reason the denial of guilt seems real is because the presenting personality, in fact, did not commit the crime; it is the second personality that is the savage criminal. Less severe examples are seen in cases of embezzlement, kleptomania, sexual compulsion, deviant behavior, and where men live dual lives, with separate wives and identities.

Of importance is that in dissociated dual personalities, the two personalities are actually not aware of each other. Although such disorders are statistically rare in the overall population, they are relatively common in criminal cases, as the second personality is often very active and surfaces via the action of the repressed criminality.

This split of personality occurs before age three, as the infant responds to parental correction not by modifying the personality but by dissociating the personality into the "good me" and the "bad me." The "bad me" then becomes repressed, disowned and unameliorated, and begins to lead a secret life, free of restraint. The "bad me" is sometimes given a different name and only emerges periodically to commit acts of cruelty or bizarre behaviors and serial murders. These people often become famous criminals, e.g., "Jack the Ripper," and the elusive serial killers that make the headlines as serial rapists, pedophilic child killers, cannibalistic murderers, and talisman criminals who taunt the police and public with signatures to their crimes.

The discovery that two completely different personalities can exist in the same individual came about accidentally. Some years ago, a prospective visitor was screened by consciousness calibration prior to the visit. Upon rescreening as the date for the visit approached, a widely different calibration was obtained (originally 350; the second time, 135). This was the first encounter with the phenomenon. Further questioning revealed that there was a wide disparity between the intentions of the two different persons in one body. One was benign and the other malicious, and therefore, the visit was cancelled. Several years later, an employee who had been acting somewhat strangely was also found to have a second, untrustworthy personality and had to be terminated, despite an excellent curriculum vitae.

Consciousness calibration is the only decisive method for the detection of dangerous individuals. The process, as was demonstrated on the videotape, is quite simple. One merely states, "This person is integrous." (Yes/No) "The second in command is integrous." (Yes/No) "The third level down is integrous. (Yes/No) When the level is determined, the roster, especially by identification photos, reveals in a few seconds those individuals who make the arm go weak to an investigative team that has no idea who these persons might really be. A well-trained and integrous team is only interested in the truth. They do not need or even want to know the names of the individuals. The test subject can even be a child, as was demonstrated in the video, who knows nothing of the matter.

The same procedure reveals terrorist suspects, e.g., "Heathrow Airport contains a dangerous terrorist." (Yes/No) Then determining the location is easy. Using a map, one states "In Section A." (Yes/No) "In Section B. In Section C," and so on. Then the flight number is identified. "A terrorist is trying to board Flight 222, which is scheduled to leave at 4:15 PM." (Yes/No).

This procedure can be done with the video surveillance of a crowd, such as at a football stadium or a parade. The only requirements are that the intention and purpose are integrous, the persons doing the questioning have the authority, and they have received permission to ask about a given matter prior to using the arm-response technique.

Although individuals with severe character disorders are adept at dissimulation, they can only control their personality performance and cannot disguise their low calibratable level of consciousness, which is in the "public domain" of the universal, impersonal field of consciousness that has no opinions or intellectual limitations. Like an impersonal electrostatic field that merely crackles and gives an electrostatic response to the presence or absence of electrons, it is beyond deception and has no motivation. The muscle test is not truth versus falsehood but merely indicates truth or its absence. An electrostatic field simply fails to respond if it is not presented with a stimulus, but it visibly "lights up" commensurate with the strength of the stimulus and thereby serves as a diagnostic function of impressive elegance.

### ***Truth and Survival***

By analysis, it is revealed that the highest fruits of our society are the automatic consequence of truth, and society's problems are the fallout from falsehood. Freedom, peace, and, as we have seen, even survival itself, are supported by the social fabric field in which truth prevails. How, then, is such truth to be identified inasmuch as man's mental apparatus precludes it by design, and 78 percent of the world's population (49 percent in America) lives by principles that are not integrous? In a free society, the nonintegrous are vociferous and convincing, and the media magnify their influence. \*7

"We change the world not by what we say or do but as a consequence of what we have become."

—Dr. David R. Hawkins

## The “Dark Arts” Behind the Serbian Progressive Party

**The West played a major role in bringing the Serbian Progressive Party to power with an absolute majority in parliament. But one PR firm in particular, said to practice “dark arts” of media manipulation, was the brains behind it all.**

Recently, I was asked to comment on the state of journalism in Serbia. I responded by saying that we can’t look at the deteriorating media climate in Serbia without first examining the role the Western media played in bringing the current government to power. The complete lack of objectivity on the part of the international community and press in the pre-election period was deeply disturbing and contrary to the promotion of so-called democratic principles of political choice and plurality. It’s clear that the editorial policy of many major English-language publications was simply to align their messaging with that of their respective governments.

The US was particularly fond of the Progressive party. In September 2013, American Ambassador Michael Kirby told the popular daily *Blic* that he “was sure that [now Prime Minister Aleksandar Vucic] would not become a dictator”, and lauded the ascendent leader for signs of “freedom of media and democracy”. (A little advice for ambassadors the world over: if you have to reassure the public that the politician you’re backing is “not a dictator”, you are supporting a dictatorship)...

The Progressives' overwhelming win in the last election means a single party now has a monopoly on power. Serbia's party system has become unbalanced. The Progressives received 48.8 percent of the vote, while the Socialists, in second place, took just 14 percent. Support for opposition parties has been decimated and their leaders reduced to mere bit players in the puppet theater of Serbian politics. How did it happen?

Bell Pottinger helped make it happen. The secretive British firm was founded by Lord Bell of Belgravia, an aging, chain-smoking Conservative who was knighted by his longtime client, Margaret Thatcher, in 1990. The marketing and PR company has always tried to keep its client list hush hush, and maybe for good reason. Notable among its past and present clientele are longtime Belarusian dictator Alexander Lukashenko, First Lady of Syria Asma Assad, Augusto Pinochet, FW de Klerk (when he ran against Nelson Mandela for president of South Africa) and the government of Bahrain. A registry of political consultants reveals that the Government of Serbia was a "fee-paying client" of Bell Pottinger's through November 30 of last year. The Government of Serbia generated a minimum turnover of 150,000 to 200,000 euros for Bell Pottinger in the nine months between January and November 2013—making it one of the firm's two highest-paying clients in Europe's Transparency Register.

*Balkanist* spoke with Daniel Hamilton, a partner at Bell Pottinger who regularly tweets about the Balkans, via email. "Bell Pottinger fully complies with both EU and UK legislation and public affairs industry rules on transparency, and has nothing to add to the declarations we have made on the various public registers," he wrote. "I have a long-standing [sic] in the Balkans and observed the elections in North Mitrovica, Zvečan, Zubin Potok, Lesak and Leposavić last year in a personal capacity."

Of course, the beneficiary of Bell Pottinger's expertise in marketing and reputation management was the Serbian Progressive party, but the Serbian public should ask themselves who paid for it. The Progressives have also continued to use the London firm's services well beyond the period stated in the current registry—the PR agency even threw a party for journalists on election night.

Interestingly, the Government of Serbia, Etihad Airways, and the United Arab Emirates were all clients of Bell Pottinger at the very same time. The PR firm helped shape the media narrative about Vucic's Serbia as the latest investment destination, and was still doing so as recently as ten days before the vote. A March 6 press release from Bell Pottinger titled "Serbia Secures \$1 bn Loan from UAE" dedicates nearly three paragraphs to comments from Vucic, including the dubious pre-election promise "the loan will benefit each and every household in Serbia." Has it?

In a separate note to editors, the press release contains praise for the "current government": "...GDP is predicted to grow at an average annual rate of 5.8 percent until 2020 under the current Government's programme focused on investment growth... In the first quarter of 2013, FDI inflow was EUR 330m compared to EUR 180m in the same period of 2012. During the same period, there was also a 25 percent increase in exports."

Most press releases issued by Bell Pottinger direct readers to the website "Serbia in Europe," which the PR firm apparently created for the Serbian government. It appears utterly useless. A slider informs the visitor: "Serbia is a democratic country with human rights and basic freedoms." Of course, it also has a news section with articles favorable to Vucic and the Progressives, like "World's Best Bonds for Serbia on Pro-EU Vucic's Poll Lead," and "Serb Progressives Win Majority in Parliament on EU Pledge." In an eerie parallel with the Facebook page for the BiH Dayton Project, which we examined for our piece on American lobbyists in Republika Srpska, the Twitter account for "Serbia in Europe" had exactly 14 followers at the time of writing (note: the Twitter account has gained six followers since March).

But Bell Pottinger has other strengths. One of them is placing flattering stories about tyrannical clients in prestigious publications.

Several years ago, a series of puerile profiles of the glamorous Syrian (but “British-born”) Asma Assad and her family began appearing in a number of slick magazines and online media, including a now infamous *Vogue* spread titled, “A Rose in the Desert”. Bell Pottinger insist they only advised her about how to establish her own communications office in Damascus.

Andy Beckett, who was granted a rare interview with Lord Bell of Belgravia at the firm’s London offices in the moneyed Mayfair district, offered relevant impressions of the lobby. “The day’s newspapers hang from clips on the wall,” he wrote. “The implication is that Bell, who has worked in PR or advertising since 1959, can get you or your company or government into them.”

There have been some pretty fluffy pieces on Vucic and his Progressives published in the Anglo-American press this past year. “Aleksandar Vucic: The Man Who’s Bringing Belgrade in from the Cold”, from *The Independent* in August 2013, is one of the more egregious examples. “Serbia Deserves its EU Dream”, recently published in the *Financial Times* is another. Election coverage by the BBC also went a tad overboard. “[Vucic’s] party is also credited with normalizing relations with Kosovo,” one segment under the sub-header “Super-guy” read. “It’s a remarkable story of redemption for Aleksandar Vucic.”

Not only do employees of Bell Pottinger get positive articles published about their clients in supposedly “objective” news media, but they’ve also been known to sanitize their clients’ Wikipedia profiles, deleting negative information while inflating achievements. They were caught doing this so many times, that in late 2011, Wikipedia suspended 10 accounts associated with the firm.

Then, undercover journalists with the Bureau of Investigative Journalism caught top executives of Bell Pottinger on camera claiming they had connections to the numerous high officials in the British government, including William Hague. They also said they could set up a meeting for a client with David Cameron “within 24 hours” and discussed how to “drown out” damaging Google search results about human rights violations. The execs admitted that Bell Pottinger has an entire team that “sorts” negative information on their clients’ Wikipedia pages and explained that MPs hostile to investigative journalism could be “used” to attack reporters for minor errors. A senior executive for Bell Pottinger proudly called these methods “dark arts”.

Vucic and others in his orbit certainly have very dark pasts they’d like to hide. Bell Pottinger has helped Vucic reframe his so the broader public has largely learned to forgive him his earlier years as Minister of Information under Milosevic as a little “youthful indiscretion”. But Vucic will be under even greater scrutiny as prime minister with an overall majority in the parliament. If Bell Pottinger remains with the Progressives, they will guard him vigilantly — no matter what he’s done. “The reputation they have is as an agency that goes where other agencies would fear to tread,” said Alec Mattinson, the deputy editor of *PR Week*.

Bell Pottinger knew who the new premier had to be in order to win the elections: Serbia’s standard-bearer of stability, its superman, its pro-EU reformer, its corruption-fighting, power-consolidating tamer of the oligarchs. But the West’s main rationale for supporting Vucic and the Progressives in attaining the absolute majority in parliament is the belief that they will eventually remove the preamble to the constitution that defines Kosovo as a part of Serbia. If that is indeed the case, it will take a very long time and the cost will likely be very high. <sup>\*9</sup>

# The New King Coal

**I predicted in this column last week that the left wasn't going to kill off the coal industry so much as it was going to steal it. That prediction is already becoming true courtesy of billionaire George Soros.**

U.S. Securities and Exchange Act filings indicate that Soros has purchased an initial 1 million shares of Peabody Energy and 553,200 shares of Arch Coal, the two largest publicly traded U.S. coal companies. As pointed out last week, both companies have been driven perilously close to bankruptcy by the combination of President Obama's "war on coal" and inexpensive natural gas brought on by the hydrofracturing revolution.

Under the hypothesis that not even socialists would leave trillions of dollars worth of a perfectly safe and clean energy source in the ground for the sake of the imaginary "climate crisis," I posited that once the existing coal industry ownership was wiped out by President Obama's regulatory onslaught, a new politically correct ownership would rehabilitate the fuel by contributing to Democrats.

Enter George Soros... Less than a year ago the Soros' Climate Policy Initiative issued a major report concluding that the world could save \$1.8 trillion over the next two decades by transitioning *away* from coal. The report referred to coal reserves as "stranded assets" that were losing value as they were no longer needed.

What a difference a few months makes, especially when those months have seen coal company stocks fall to fire sale prices... I doubt the shrewd Soros is looking to make just a few million dollars on these investments.

Soros isn't the only leftist shark in the water.

There's billionaire hedge fund operator Tom Steyer who committed to spend \$100 million in 2014 to elect anti-coal, climate alarmist-friendly politicians. Though he failed miserably, he has re-upped for the same program in 2016. Yet Steyer's dirty secret is that, despite his protestations of concern about the climate, he's made a fortune from coal production in Indonesia over the past 15 years. It's easy to imagine some Steyer-steered investment vehicle rescuing sinking coal companies under the guise of turning coal into "clean energy" business. Though the current coal industry trial and failed miserably to do re-brand itself as "clean," with the right politics and the right payoffs, Steyer no doubt could pull off that trick.

Another shrewd investor is Obama supporter Warren Buffet. Despite his long-standing leftist political inclinations, Buffet owns the trains that haul politically incorrect fracked oil and utilities that burn coal... Billions of tons of coal are becoming available almost for free. Anyone think he hasn't noticed?

Finally, there are the likes of the left-leaning Goldman Sachs and the rest of the wolves of Wall Street. Goldman, in particular, has a long history of not only financing the coal industry but also of trading coal as a commodity on an international basis. Little known is the fact that while the U.S. coal industry seems to be circling the bowl in the U.S., coal is actually the fastest growing fuel on a global basis. And coal will continue to grow regardless of whatever climate treaty is signed in Paris later this year. Goldman's favorite green has nothing to do with the environment.

Although Obama's great coal train robbery will likely be completed in the next couple years or so, none of this should be taken as a recommendation to buy coal stocks. Existing shareholders are likely to be wiped out by bankruptcy or paid off with a pittance. But watching the crime play out will be an unforgettable exercise in the corruption of power and power of corruption. <sup>\*11</sup>

# How to Produce 6,000 Pounds of Food in Small Spaces

Survivalist communities and preppers all over America have learned that properly tilled land can produce tremendous amounts of food. Well-balanced soil is quite generous and will give back much more than it receives. A few organic seeds, adequate watering, and some rich compost can provide even a novice farmer with a bountiful harvest.

Ever since Big Agra took over the farming of America's vast farmlands, most people are disconnected from the process of food production from seed to table. Agribusiness has so thoroughly monopolized farming and husbandry that many children in the cities think that the food comes from supermarkets and grocery stores, not grainfields and orchard groves.

Now comes along a family just south of LA that has set the bar a little higher for the many residential farms that are popping up all over the place. Their track record is quite extraordinary by any standard. Here are the latest numbers from a family that farms just 4,000 square feet of land.

*"If you try to do the math, it just doesn't seem to compute. But somehow the numbers work out because **the Dervaes family is able to produce about 4,300 pounds of vegetables, 900 chicken and 1,000 duck eggs, 25 pounds of honey, and further poundage of seasonal fruits on their 4,000 square-foot postage stamp of land just outside the southern California's sprawling megalopolis. Beyond providing food for themselves, the family makes about \$20,000 per year by selling their produce from their front porch.**"*

That kind of productivity would rival any highly mechanized, GMO-seeded, chemical fertilized Big Agra farm field. That the Dervaes family was able to reap such an extraordinary harvest from a tenth of an acre is actually the status quo where farmers really know what they're doing. Especially when they avoid many of the pesticides, fungicides, herbicides, insecticides, chemical fertilizers and GMOs of modern farming.

Not only does this family farm eschew all the modern techniques and technology of agribusiness, they run their farm off the grid in more ways than one.

*"Every member of the family pitches on to make sure every square inch of their land produces as much as possible. In addition, beyond simply producing their own organic food, the Dervaes family is living almost totally off the grid. Many of the gadgets they use are hand-powered, and what isn't hand powered gets energy from solar panels, which leads to power bills that max out at about \$12 per month. They also don't burn any fossil fuels, as their car is powered by biodiesel produced from used cooking fat—which restaurants deliver to their doorstep."*

The real secret here is that a focused effort applied with the ancient wisdom about how to till the land and enrich the soil can go a long way. Survivalist communities, even in California in the midst of a 1000 year drought, have proven that farming can still be highly productive when you know the tricks of the trade and the land is genuinely respected...

Many farmers, both small organic and Big Agriculture, have recognized that the rules have been changing. The nation may be entering a period where self sufficiency and independence from corporate farming could become useful. The drought in California and the ensuing water wars are providing a sneak preview of what may unfold wherever new weather patterns establish inhospitable climate trends. <sup>\*16</sup>

# Slaves and Masters

Dr. Albert Schweitzer, who spent most of his life in Africa "uplifting" Negroes, received the Nobel Prize for Peace in 1952. He held several doctorate degrees. Shortly before his death, he said:

"I have given my life to alleviate the sufferings of Africa. There is something that all white men that have lived here must learn and know; that these individuals are a sub-race; they have neither the intellectual, mental or emotional abilities to equate or share in any of the functions of our civilization. I have given my life to try and bring them the advantages which our civilization must offer, but I have become well aware that we must retain this status; white, the superior, and they the inferior, for whenever a white man seeks to live among them as their equal, they will either destroy him or devour him, and they will destroy all his work; and so for any existing relationship or for any benefit to this people let white men from anywhere in the world who would come to help Africa remember that you must continually retain the status; you the master, and they inferior, like children that you would help or teach. Never fraternize with them as equals, never accept them as your social equals, or they will devour you; they will destroy you." \*<sup>17</sup>

## ... Good Reason for Signing Declaration of Independence

Charles Carroll was the only Roman Catholic to sign the Declaration of Independence...

In 1772, Charles Carroll condemned the British Government's oppressive taxes by writing in the Maryland Gazette under the pseudonym "First Citizen." When his identity became known, the British loyalist Daniel Dulany the Younger wrote mean-spirited personal ad-hominem attacks against Charles Carroll, ridiculing him.

Charles Carroll's statesmanlike response was to explain that because Dulany engaged in "virulent invective and illiberal abuse, we may fairly presume, that arguments are either wanting, or that ignorance or incapacity know not how to apply them."

Charles Carroll led the Tea Party movement in Maryland. On Oct. 19, 1774, Charles Carroll helped set fire to the British ship Peggy Stewart, which was carrying tea into the Annapolis harbor.

The Continental Congress sent Charles Carroll, along with his cousin Fr. John Carroll, Ben Franklin and Samuel Chase to Canada in an unsuccessful attempt to persuade them to join in the Revolutionary cause.

Charles Carroll's cousin, John Carroll, was the first Catholic Bishop in the United States, who founded Georgetown University.

Bishop John Carroll wrote in 1790: "In 1776, American Independence was declared, and a revolution effected, not only in political affairs, but also in those relating to Religion. For a while the thirteen provinces of North America rejected the yoke of England, they proclaimed, at the same time, freedom of conscience and the right of worshipping the Almighty, according to the spirit of the religion to which each one should belong. Before this great event, the Catholic faith had penetrated two provinces only, Maryland and Pennsylvania. In all the others the laws against Catholics were in force. Any priest coming from foreign parts, was subject to the penalty of death; all who professed the Catholic faith, were not merely excluded from offices of government, but hardly could be tolerated in a private capacity. ..."

Bishop John Carroll ended: "By the Declaration of Independence, every difficulty was removed: the Catholics were placed on a level with their fellow-Christians, and every political disqualification was done away."

Charles Carroll wrote to Rev. John Stanford on Oct. 9, 1827: "To obtain religious as well as civil liberty I entered jealously into the Revolution, and observing the Christian religion divided into many sects, I founded the hope that no one would be so predominant as to become the religion of the state. That hope was thus early entertained because all of them joined in the same cause, with few exceptions of individuals. God grant that this religious liberty may be preserved in these States, to the end of time, and that all believing in the religion of Christ may practice the leading principle of charity, the basis of every virtue."

In 1776, knowing the British would target the signers of the Declaration, he did not want his relatives who had the same name to be mistakenly punished, so he made his identity clear by signing "Charles Carroll of Carrollton."

As published in the National Gazette, Philadelphia, Feb. 26, 1829, Charles Carroll wrote to George Washington's adopted son, George Washington Parke Custis, who was president of the Society of Friends of Civil and Religious Liberty in Ireland: "When I signed the Declaration of Independence I had in view not only our independence from England but the toleration of all sects professing the Christian religion and communicating to them all great rights. Happily this wise and salutary measure has taken place for eradicating religious feuds and persecution and become a useful lesson to all governments. Reflecting, as you must, on the disabilities, I may truly say, of the proscription of the Roman Catholics in Maryland, you will not be surprised that I had much at heart, this grand design founded on mutual charity, the basis of our holy religion."

Charles Carroll was elected to the first U.S. Senate in 1789. In 1789, after George Washington was elected the first President, Charles Carroll sent him a letter of congratulations, which was also signed by other Catholic leaders, namely Bishop John Carroll, Daniel Carroll, Thomas FitzSimons of Philadelphia, and Dominick Lynch of New York: "This prospect of national prosperity is peculiarly pleasing to us, on another account; because, whilst our country preserves her freedom and independence, we shall have a well founded title to claim from her justice, the equal rights of citizenship, as the price of our blood spilt under your eyes, and of our common exertions for her defense, under your auspicious conduct—rights rendered more dear to us by remembrance of former hardships."

George Washington replied to Charles Carroll and the other signers in a letter "To the Roman Catholics in the United States," March 15, 1790: "I presume that your fellow-citizens will not forget the patriotic part which you took in the accomplishment of their Revolution, and the establishment of their government; or the important assistance which they received from a nation in which the Roman Catholic faith is professed. I thank you, gentlemen, for your kind concern for me. ... And may the members of your society in America, animated alone by the pure spirit of Christianity, and still conducting themselves as the faithful subjects of our free government, enjoy every temporal and spiritual felicity. G. Washington."

In France, Thomas Paine was arrested and almost executed. He became critical of President George Washington and fell out of favor. When Thomas Paine wrote "The Age of Reason," it was condemned by Charles Carroll, John Adams, Samuel Adams, Benjamin Rush, John Witherspoon, Elias Boudinot, Patrick Henry, William Paterson, Zephaniah Swift, and John Jay.

Charles Carroll described Thomas Paine's "The Age of Reason" as: "... blasphemous writings against the Christian religion."

Charles Carroll, who was a member of a society to end slavery, wrote to Robert Goodloe, April 23, 1820: "Why keep alive the question of slavery? It is admitted by all to be a great evil."

On Sept. 27, 1825, in a letter to Charles W. Wharton, Esq., written from Doughoragen, Maryland, Charles Carroll stated: "On the mercy of my Redeemer I rely for salvation and on His merits not on the works I have done in obedience to His precepts."

After John Adams and Thomas Jefferson died on July 4, 1826, Charles Carroll remained the last surviving signer of the Declaration of Independence. The city of New York sent a committee to Charles Carroll to get his final comments on the Declaration, which he wrote on Aug. 2, 1826: "Grateful to Almighty God for the blessings which, through Jesus Christ Our Lord, He had conferred on my beloved country in her emancipation and on myself in permitting me, under circumstances of mercy, to live to the age of 89 years, and to survive the fiftieth year of independence, adopted by Congress on the 4th of July 1776, which I originally subscribed on the 2d day of August of the same year and of which I am now the last surviving signer, I do hereby recommend to the present and future generations the principles of that important document as the best earthly inheritance their ancestors could bequeath to them, and pray that the civil and religious liberties they have secured to my country may be perpetuated to remotest posterity and extended to the whole family of man."

Charles Carroll wrote in the first rendition of his last will and testament, Dec. 1, 1818: "I, Charles Carroll. . . give and bequeath my soul to God who gave it, my body to the earth, hoping that through and by the merits, sufferings, and mediation of my only Savior and Jesus Christ, I may be admitted into the Kingdom prepared by God for those who love, fear and truly serve Him."

At his death at the age of 95, Nov. 14, 1832, Charles Carroll was considered the wealthiest citizen in America. Charles Carroll's statue was chosen to represent the State of Maryland in the U.S. Capitol's Statuary Hall...

On Nov. 4, 1800, Charles Carroll had written to James McHenry, the signer of the Constitution for whom Fort McHenry was named: "Without morals a republic cannot subsist any length of time. ... They therefore who are decrying the Christian religion, whose morality is so sublime and pure and which insures to the good eternal happiness, are undermining the solid foundation of morals, the best security for the duration of free governments."

"Corrupt the young, get them away from religion. Get them interested in sex. Make them superficial, destroy their ruggedness. Get control of all means of publicity and thereby: Get the peoples' mind off their government by focusing their attention on athletics, sexy books and plays, and other trivialities. Divide the people into hostile groups by constantly harping on controversial matters of no importance. Destroy the people's faith in their natural leaders by holding up the latter to ridicule, contempt and obloquy. Always preach true democracy but seize power as fast and as ruthlessly as possible. Encourage government extravagance, destroy its credit, produce fear with rising prices, inflation and general discontent. Foment unnecessary strikes in vital industries, encourage civil disorders and foster a soft and lenient attitude on the part of government towards such disorders. By specious argument cause the breakdown of the old moral virtues: honesty, sobriety, continence, faith in the pledged word, ruggedness. Cause the registration of all firearms on some pretext, with the view of confiscating them and leaving the population defenseless." — *Vladimir Lenin*

"What you know, you think. What you think, you become." — *Walter Russell* [Thus: 'Be careful what you wish for!']

## Simple Living

Simple living may be characterized by individuals being satisfied with what they have rather than want. Although asceticism generally promotes living simply and refraining from luxury and indulgence, not all proponents of simple living are ascetics. Simple living is distinct from those living in forced poverty, as it is a voluntary lifestyle choice.

Adherents may choose simple living for a variety of personal reasons, such as spirituality, health, increase in quality time for family and friends, work-life balance, personal taste, financial sustainability, frugality, or reducing stress. Simple living can also be a reaction to materialism and conspicuous consumption....<sup>\*20</sup>

"Our goal is to bring every thought into captivity, because every thought is a lie." —*Rev. Jesse Lee Peterson*

"They must find it hard to take Truth for authority who have so long mistaken Authority for Truth." —*Gerald Massey*

"Words contain knowledge if they are true..." The mystic's words about Reality carry power for the hearer because the mystic is that which knows Reality, by having become one with It.<sup>\*21</sup>

"Know thyself." —*Jesus Christ (Mystic)*
