

Æther [Rev. 20180619]

By J — Latest revision: <http://allis.foundation/Aether.pdf>

The main theme from this chapter is that shape power produces measurable effects and can be measured with special sensors. The pyramid shape converts the aetheric forces to standard electrical and magnetic energies which are measurable by standard instrumentation. *1

The division of the United States into federations of equal force was decided long before the Civil War by the high financial powers of Europe. These bankers were afraid that the United States, if they remained in one block and as one nation, would attain economic and financial independence, which would upset their financial domination over the Europe and the world. Of course, in the "inner circle" of Finance, the voice of the Rothschilds prevailed. They saw an opportunity for prodigious booty if they could substitute two feeble democracies, burdened with debt to the financiers... in place of a vigorous Republic sufficient unto herself. Therefore, they sent their emissaries into the field to exploit the question of slavery and to drive a wedge between the two parts of the Union... The rupture between the North and the South became inevitable; the masters of European finance employed all their forces to bring it about and to rum it to their advantage. *2

Vision Quest

A vision quest is a rite of passage, similar to an initiation, in some Native American cultures. It is a turning point in life taken before puberty to find oneself and the intended spiritual and life direction. When an older child is ready, he or she will go on a personal, spiritual quest alone in the wilderness, often in conjunction with a period of fasting. This usually lasts for a number of days while the child is tuned into the spirit world. Usually, a Guardian animal will come in a vision or dream, and the child's life direction will appear at some point. The child returns to the tribe, and once the child has grown, will pursue that direction in life.^{*6}

People Can Move from Fighting Fear and Anger to Adulthood

An intelligent person has a well working brain. Every child automatically reacts with love in a loving environment. In an non-loving environment, the gentle-natured child automatically reacts with fear, the proud-natured with anger. When the capacity to feel is filled with fear or anger, the survival mechanism trips, internalizing fear-flight or anger-fight.

Internalized fear or anger controlling the mind is mental illness. Fear-flight in the gentle child is called autism. Just as removing a hand from a burning stove, the mind automatically shuts out the world of people and creates an subconscious autistic world of loving animals, tree and flower friends. The conscious mind is limited to a monitoring voice that the child does not know is itself. In teenage and older children, it is called schizophrenic.

Anger-fight in the child is called the classroom bully. The controlling actions of the older anger-fight people is labeled criminality or authority.

When the capacity to feel is filled with love, love is internalized. The child mind transcends to the spiritually oriented, love-directed, nonviolent child of God, the adult mind.

Most people have not internalized fear, anger or love. I internalized fear when I was a small child. Incredibly, I survived 31 years of psychiatry. Then a nurse in an emergency room told me to go to a 12-step program, saying, "They teach people how to get well there." I went and they do.

It is a place of love and truth. Just as food and water is the prevention and cure of starvation, so love and truth is the prevention and cure of mental illness.

I was no longer suicidal after my first meeting for they gave me hope. It only took six months for my capacity to feel to fill with love and internalize love, making the profound change to the nonviolent, love-directed adult mind.

Clover Greene, founder and director, Welcome World

You Can Heal Your Life

In the infinity of life where I am, all is perfect, whole, and complete.

I accept health as the natural state of my being.

I now consciously release any mental patterns within me that could express as dis-ease in any way.

I love and approve of myself.

I love and approve of my body.

I feed it nourishing foods and beverages.

I exercise it in ways that are fun.

I recognize my body as a wondrous and magnificent machine, and I feel privileged to live in it.

I love lots of energy.

All is well in my world. *10

Children of the Revolution

Millions of Americans tune in seriously to politics for the first time in an election year during the conventions of both parties, and the Sanders delegates were throwing sand into the gears. It must have looked and sounded terrible to undecided voters, so Sanders sent a message to his delegate whips. "Our credibility as a movement will be damaged by booing, turning of backs, walking out or other similar displays. . . . I ask you as a personal courtesy to me to not engage in any kind of protest on the floor. It's of utmost importance you explain this to your delegations."

It had zero effect. They jeered Elizabeth Warren with cries of "We trusted you!" They did it to Marcia Fudge, too, who took Wasserman Schultz's place as DNC chair. "Excuse me," she said over their incessant booing. "I intend to be respectful of you, and I want you to be respectful of me." They switched gears only slightly when Representative Elijah Cummings from Maryland took the stage. I could hardly hear a word he said over chants of "No TPP" from the floor. The Sanders wing of the party shares Trump's dim view of international trade and detests the unratified Trans-Pacific Partnership as much as he does. They razed Cummings because he opposed an amendment by Sanders and Keith Ellison to change the party platform's ambiguous stance on the subject, which says, in part, that "there are a diversity of views in the party," which is entirely accurate. (Sanders wanted the DNC platform to oppose the TPP outright.)

The Clinton and Sanders delegates fought each other throughout Monday evening like unhappy family members in a dysfunctional parent-child relationship. *New York Times* reporters captured some memorable moments. A Sanders floor delegate rose with tape over her mouth and the word "Silenced" printed across it. Another delegate, Nancy Kaplan, said, "This woman has no idea what real oppression looks like. It's lovely when they cheer for Bernie. I think it's inappropriate and rude when they boo." Meanwhile, Clinton delegate Sue Savary from California accurately described the Sanders delegates as "kids." Sanders delegate Robert Shearer, half her age and without a hint of irony or self-awareness, said, "Ageism sucks. You're old."

Sanders himself finally took the stage and went full-tilt after Trump. "We need leadership which brings our people together and makes us stronger," he said, "not leadership which insults Latinos and Mexicans, insults Muslims and women, African-Americans and veterans, and seeks to divide us up. By these measures, any objective observer will conclude that—based on her ideas and her leadership—Hillary Clinton must become the next president of the United States. The choice is not even close."

His own delegates booed him.

Sanders seemed bewildered by the forces he had unleashed. He hadn't just railed against Clinton during the primary campaign. He had told everyone in America that the economy is rigged, that they're getting screwed by the system, that Clinton is a part of that system, and that what America needs is a socialist revolution. Perhaps for him, this was just rhetoric, but his most ardent supporters and delegates took it seriously. They will continue fighting without him, no matter what happens this year.^{*11}

America is an idea, not just a landmass, a military and a flag. And that idea is that the individual is THE SOVEREIGN with inalienable rights that CANNOT be granted or usurped by The State. And The State only exists by the consent of the governed, and they delegate a LIMITED amount of their power to said state. It is life, liberty and the pursuit of happiness. It is the freedom for the INDIVIDUAL to make his life his own, as chaotic and messy as necessary.^{*12}

The Flower of Life / Sacred Geometry

Crop Circles & Consciousness

I'd like to add my own 2 cents...

There is a huge connection between crop circles, consciousness, sacred geometry, and the spiritual realm in general. Below is one example. However, before one can grasp the genuine depth of higher consciousness surrounding these formations, one must understand 3 things before engaging in serious study of them...

1st) The band at which England's crop circles occur today spans approx 2,000-2,018 nautical miles from the temple mount in Jerusalem, which is to say they reflect distance as time. In other words, England's crop formations first gained momentum around the year 1980 at approx 1,980 nautical miles from the temple and have shifted forward in time and space ever since at a 33 degree angle anchored from the temple mount.

2nd) It's important enough to state again - The area where English crop circles occur is at a 33 degree angle from the temple mount in Jerusalem. These parts of England have a long spiritual history due to its location on Earth, hence Stonehenge, Avebury, Silbury Hill, Cherhill, Glastonbury, etc.

3rd) The temple mount in Jerusalem serves as an anchor in time & space to reveal that most of England's crop formations are indeed a manifestation of higher consciousness and powered by such, hence the enormity of sacred geometry & sacred number so embedded within the formations of the past 30 years.

Here is one crop formation example that illustrates the above:

On the date 08/08/08, there was a crop circle that formed approx 4 miles south of Avebury Circle and Silbury Hill. The formation was 888 symbolism, also interpreted as the sign of infinity. Measured using Google Earth, the crop circle was precisely 2,008.69 nautical miles from the temple mount in Jerusalem, which translates to being equal in distance as in time (08/08/08 in time = 2008.69 nautical miles in distance).

Here we have a formation showing synchronicity in terms of both time, space, symbol, & spirit as anchored from the temple mount:

- In time as the 888 formation occurs 08/08/08
- In space as being the exact distance & point in nautical miles as its date when anchored from the temple
- In symbol & spirit as this part of earth serving as a canvas for impressions & communications from higher consciousness at a 33 degree angle from Jerusalem

Much of this knowledge is owed to the late David Flynn, a brilliant mind to be missed. *¹⁴

Gravity

With the benefit of this understanding of the relation between the scalar motion and the reference system, we can now return to the gravitational problem, and consider the situation in which the gravitating object is *not* free to move in the reference system. Here, present-day physical science is faced with a contradiction. The behavior of gravitating objects that are free to move shows that gravitation is a motion. But there are gravitating objects that do not change their position in the reference system, and therefore are not in motion, as motion is currently defined. The reaction of the theorists to the situation has been to evade the issue by treating gravitation as a *force* rather than as a motion.

At this time, therefore, we need to give some consideration to the relation between force and motion. For application in physics, force is defined by Newton's second law *of* motion. It is the product of mass and acceleration: $F = ma$. Motion is measured on an individual mass unit basis as velocity, or speed (that is, *each* unit moves at this rate), or on a collective basis as momentum, the product of mass and velocity, or speed. Momentum was formerly called "quantity of motion," a term that more clearly expresses the true nature of the quantity. The time rate of change of motion is dv/dt (acceleration, a) in the case of the individual units, and $m dv/dt$ (force, ma) when measured collectively. Thus force is a property of a motion, in exactly the same way as acceleration. It is the time rate of change of the total quantity of motion, the "quantity of acceleration," we could call it.

It follows from this that a force cannot be autonomous. Every force is, *by definition*, a property of a motion. Thus force cannot originate in a motionless object. The problem of the motionless gravitating objects is therefore not solved by the introduction of the force concept. What is needed is a recognition that gravitation *is* a scalar motion, and that the apparently motionless gravitating object is actually moving inward in all directions just as it is when it is moving in free space. But, like the spot on the balloon surface that is resting on the floor, and like our Milky Way galaxy, it is coupled to the reference system in the location which it occupies, and it is therefore stationary *in the context of that reference system*.

The effect of a negative (inward) scalar motion is to decrease the separation between the individual members of the scalar system. Inasmuch as the reference object is actually in motion, even though it is represented in the reference system as motionless, the gravitational motion of this object contributes to the magnitude of the decrease in separation between it and any distant object. And since the reference system cannot attribute this contribution to the object that is represented as motionless, it has to attribute the entire decrease in separation to motion of the distant object. In the gravitating systems with which we are most familiar, one member of each system (the earth, for example) is much more massive than the objects with which it is interacting, and becomes the reference object because it is immobilized by its own inertia. The contribution of this reference object to the motion of the other objects of the gravitating system (falling bodies) is clearly evident, and the reference object is therefore credited with exerting a force of attraction on each of these other objects. When it is recognized that gravitation is a scalar motion, it can be seen that the motion component, or force, apparently acting against the distant object is actually the motion of the reference object itself, misrepresented by the reference system, which is incapable of representing the scalar motion correctly.

The transfer of the motion of the reference object to the objects with which it is interacting explains the presence of a "force field" in the space surrounding the reference object. This field is not a tangible physical reality. Nor is it a strain in the hypothetical ether, or in space, as asserted in some theories. In fact, if there is no other mass within the effective gravitational range of the reference object, the force field does not correspond to anything at all, other than potentially. But if a mass is introduced into this region, a portion of the gravitational motion of the reference object is

transferred to this mass by the manner in which the scalar motions are represented in the reference system. Since the reference object is moving in all directions, the force field due to its motion is radial, and there is no need for the kind of a distortion of space that Einstein's general theory calls for.

When gravitation is recognized as a scalar motion it becomes evident that the forces due to electric charges and the corresponding magnetostatic phenomena (magnetic charges, we may call them) are likewise properties of scalar motions. Observationally, these forces differ from the gravitational forces only in those respects in which scalar motions are variable; that is, in magnitude and in sign. Here, again, the absence of observable motion at the points of origin is due to the fact that the locations of the motions (the locations of the charges) are the reference points at which the motion is frozen by the coupling of the moving scalar system to the reference system.

This explanation of the origin of the forces that appear to be exerted on the distant objects provides the answer to the long-standing problem of action at a distance. Newton's gravitational law appears to call for direct action of one mass on another, regardless of their spatial separation, but many scientists are strongly opposed to the idea that a force can be exerted without a physical contact of some kind. The prevailing opinion has therefore been that the force *must be* transmitted through some kind of a medium, even though there is no actual evidence to support this assumption. The first hypothesis called for transmission through a medium, the ether, which was assumed to exist in space, but this hypothesis encountered difficulties because of the contradictory properties that the ether would have to possess in order to meet the requirements. It has therefore been succeeded by the concept of space itself as the medium, with various kinds of fields located in this space. The need for speculative constructions of this kind is now eliminated by the finding that the apparent action at a distance is merely an illusion due to the inability of the spatial reference system to represent scalar motion as it actually exists. In reality each object in a scalar system is pursuing its own course, independently of the other objects in that system.

The foregoing discussion of the scalar motion situation should be sufficient to demonstrate that by failing to give consideration to the scalar form of motion modern science has made a serious error. It is no doubt difficult for most scientists to believe that there could be a major defect in the *foundations* of present-day physical theory, but the facts are clear. The existence of scalar motion is incontestable. As pointed out earlier, it is readily observable in several different phenomena. The properties of this kind of motion can easily be deduced. Knowledge of these properties then enables identifying additional phenomena, including some of the most fundamental features of physical activity, as motions of the scalar type. The need for a thorough reconsideration of basic physical theory to take the various manifestations of scalar motions into account is therefore clearly indicated.^{*16}

The Oracle Report

When you follow the cycles of nature and the music of the spheres, space, time, and experience begins to flow in a different way.

So in the Gregorian count (calendar), it's a Wednesday - the middle of the archontic matrix's "work week" and almost the end of a "fiscal quarter" with all that this entails and produces in the world.

But in the natural cycle of the Sun and Moon, it's the first day of the Balsamic phase of the Leo cycle. In short, this means that between now and the New Moon in Virgo on Sunday, we have some of the best "conditions" to have a direct influence on the future—the next two months in particular. We have the best opportunity to put our wise owl wings over the world to assist in the restoration of peace, balance, and sanity.^{*17}

The Point or Circle

Section 4 — Erroneous conceptions. Dimensions. The Heavenly bodies. Time. Space.

Erroneous conceptions about the world in which they live interfere with men's understanding the worlds which penetrate it and the forces which keep it going. The natural sciences do not lessen ignorance and error about things which are not perceptible. They do not dispel the misconceptions of the sense-bound doer. Among the erroneous conceptions are some that are connected with size, weight, solidity, dimensions, distance, form, originals and their reflections, sight, time and space.

There is no large or small except by comparison of expanse and volume. "Large" and "small" are conceptions resulting from thinking which deals with certain perceptions through the senses. These perceptions are made in the subdivisions of the solid state of matter on the physical plane. In other states of matter, even on the physical plane, the perceptions are different. Definite objects are less and less conceived of as large or small, and objects in the radiant state are not perceived as large and small at all. If one could perceive the four states of matter intermingling in objects there would be no fixed conception of size. The large could be seen as small and the small as large.

When one looks at objects one does not see how they are made or maintained, nor the forces playing through them and giving them qualities such as weight, cohesion and conductivity, and attributes such as outline and color. One sees merely their color, their contour and their size in comparison with each other. But if he could look at a geogen unit and see other units within it and streams of units passing through it, he would see relation instead of size. If he could see the geogen unit held by another unit he would see action or cohesion, not size. When thinking is focused on extent and volume, one is prevented from perceiving the nature of the thing. When men think of a thing the impression is of size and the thinking limits itself by such comparison.

Man must understand the universe through his body. The farthest star is represented in the body and can be examined there, better than where the star is. A star is no larger than its corresponding nerve center to one who can perceive the two, not that one measures as much as the other but the conception of size gives place to that of what the star and the nerve center are and of how they are related. While one thinks of the universe as different from and as unrelated to his body, or of one as larger or as smaller than the other, he does not understand either. To one who sees the relation between them, sunspots are no larger than the heart-throbs by which they are caused. The sun can be seen as small as a heart and a heart as large as the sun. A star is like a nerve center spread out and the nerve center is as the star condensed. The Milky Way cannot be seen as a whole unless it is seen as an extension and projection of the system of ganglia and nerve plexuses. The human nerve trunks may be perceived as extending to the Milky Way, and that may be seen as the spinal cord. To understand how physical things came into and pass out of being, the idea of size has to be abandoned.

From the form plane the physical universe may be like a speck. The form plane is as much vaster than the physical plane as the ocean is vaster than the sponge in it. Yet the matter of the form plane can be understood only by that matter of the form plane which is in some part of the physical plane. The ether, that is, the solid matter of the form plane, can be perceived and dealt with from the physical plane only through a point. The ether is entered through a point just as from a point or points in the ether comes the whole physical universe.

One who can see matter in its states on the form and physical planes will not conceive of objects as large or small. He will see that what seems large on one plane or in one state of matter is small on or in another, and that the small on or in one may be large on or in the other... ^{*18}

The Politics of Fear

This week, former Vice President Al Gore was forced to withdraw a slide from his PowerPoint presentation.

Admittedly, on the surface that sounds only marginally more exciting than the news that Dan Quayle had wheat toast instead of rye with breakfast this week. But hold on a minute.

The slide in question was part of Gore's peripatetic minstrel show of environmental doom, made famous in his Oscar-winning horror-documentary *An Inconvenient Truth*. After a montage of images of people suffering from famines, floods, fires, and other biblical plagues across the globe, the slide purported to show data demonstrating that global warming "is creating weather-related disasters that are completely unprecedented."

The problem: The source of the data — the Belgium-based Center for Research on the Epidemiology of Disasters — explicitly warned against using the data the way Gore did, because there's no way to attribute all of these disasters to climate change. Caught fudging the facts, again, the former vice president had no choice but to drop the graph.

It's a small thing, in and of itself, but it illustrates something much bigger.

Democrats take understandable pride in FDR's famous declaration, made during the Great Depression, that "all we have to fear is fear itself." More recently Democrats, led by none other than Al Gore, have been fixated on the evils of the "politics of fear" — politics, allegedly, only Republicans are guilty of practicing.

Ever since the Iraq War turned decidedly unpopular, Gore has been demonizing George W. Bush and the GOP as fearmongers. "He betrayed this country!" Gore fumed of President Bush, in a famous splenetic diatribe at a 2004 Democratic Party event in Tennessee. "He played on our fears!" Gore went on to rail against the "politics of fear" going all the way back to Nixon. In 2008, when Gore endorsed Barack Obama it was in part because the Illinois senator represented a break with the "politics of fear."

What's hilarious about this is that Gore is, without question, the most successful fearmonger in America, if not the whole world. He is constantly spinning climate change in the most horrifying terms possible. He asserts global warming as the author of nearly every calamity, inflating threats in order to bully people into agreeing with him. There's no time to argue, do what I say or we're all doomed, is the central message of Al Gore's environmental shtick. And it works for him. It's made him both hugely wealthy and popular in the circles he cares about and it has advanced his agenda farther than fair-minded persuasion would.

Of course, in the process he's fueled paranoia among an entire generation of young people who think we're seconds from an environmental Armageddon.

Gore also seems to have taught Barack Obama a thing or two. President Obama, whose whole campaign was about hope over fear, has been scaring the dickens out of people lately. He has certainly terrified the stock market. He's warned of "catastrophe" and economic "disaster" from which we may never recover.

What's particularly odious about Obama's scare tactics is that he's using them for the mother of all bait-and-switches. He justifiably scares people about the magnitude of the financial crisis, but uses that fear not to sell them on a solution to the crisis but to trick them into signing up for a new Great Society. It's like convincing someone he's got cancer and then telling him that's why he needs to buy a new car... ^{*19}

Old Friends

Dream notes #84: I'm in a wooden cabin, perhaps at a camp... There's another, larger cabin next to the one I've come into. The larger cabin accommodates most of the "group," whereas in the one I am, there's (maybe) one other person. I've been trying to get away from the group and find "shelter" in the cabin. I think there's another person, a woman, who reassures me that all is fine. I hear something outside and step out, to see a different group, composed of instructor/counselor types, some bald headed, some practical scientists, and other "students." They're all standing in a line, and one of them ("very intent"), is firing a flame thrower at the larger cabin, burning the exterior of it like a burnt marshmallow... Its interior appears fine, but from the outside, no one would want to consider entering that cabin, as one might assume what's on the outside is the same inside.

My 'feeling' is the group that inhabits the larger cabin is my old group of "friends" being "burned" from memory, isolated as a failing experiment, and I'm now finding my freedom from a collective, confining social situation... This impression is reinforced by studying the interpretations below:

Cabin: To see or dream that you are in a wood cabin indicates that you will succeed via your own means. It suggests that you are self-reliant and independent, yet still remain humble. You prefer the simpler things in life.

Crowd: To dream that you are in or part of a crowd suggests that you need some space for yourself. You need solitude to reflect on a situation and recharge your energy. Consider also the familiar phrase of "going along with the crowd" which implies conformity and lack of individuality. Perhaps you feel that your own opinion doesn't count or matter. Alternatively, dreaming of a crowd means that you need to incorporate the various aspects of the crowd into your own persona. To dream that you are not part of a crowd or that you separated yourself from a crowd suggests that you are feeling left out. Alternatively, the dream symbolizes your individualism. You are your own person and you are not afraid to voice your own opinions.

Flame: To see a flame in your dream symbolizes purification.

Blow Torch: To see or use a blow torch in your dream indicates that you are trying to obliterate an aspect of your self that you are ashamed of or are embarrassed about. Consider the significance of what you are aiming the blow torch at for clues as to what you are trying to erase about yourself.²⁰

Ideal of Greatness

Wounding, especially self-wounding and wounding in relationships, is an element to this energy. It is better to look to the teaching that is implied within the situation and learn from it. It's not worth the physical toll it takes on everyone involved when the energies toy with, tempt, and trick us into being harsh with ourselves and others.

Within this, we are wise to remember the notion of being careful what we wish for because we just might get it.

The degree of the Earth at the New Moon is the Sabian symbol of "having an urgent task to complete, a man doesn't look to any distractions." This tells us of the need to remain focused and to stay the course regardless of what shows up and what falls down. We are urged to stay true to ourselves and our paths. Don't allow another to project their own vision for you.

I suggest that one of the "urgent tasks" we have this month is to release as much of that past as we can. This "last degree of the zodiac energy" is about endings and releases. It's Balsamic energy, and we are in the second of two months that are like month-long Balsamic Moon phases. Balsamic phase is the mystical, dreamy, ethereal time of the year when the veils between the worlds are thin. Our ancestors are closer. Spirit is closer. What serves neither can be released.

One last thing, something I did not cover fully in the audio recording is the significance of the degree of Mars at the New Moon with the Sabian symbol of "the gate to the garden of all fulfilled desires." This energetic implies that we have come to a "place" we were seeking and now must take it up. What do you need to admit? Do you announce yourself, knock, or just open the gate and walk through? This is a very esoteric concept, but your inner wisdom should be glimpsing or telling you what you need to get from this image.

The question for each of us this month is ***What is your ideal of greatness?*** It's what has already come into concrete manifestation at another space and time. And it's majestic.^{*17}

Labor Orgasms

Painful. Excruciating. Unbearable. These are the words most often associated with childbirth.

But what about pleasurable? Blissful? Euphoric?

Some women even say that instead of agony, childbirth can be ecstasy.

Amber Hartnell of Hawaii said she experienced an orgasm during labor when she gave birth to her son in September 2005.

"All of a sudden the orgasm just started rolling through and rolling through, and it just kept coming, and my whole body was spiraling and rolling, and I was laughing and crying," she said.

Hard to imagine? Hartnell and her husband, Nassim Haramein, were shocked as well. Although they had spent many hours planning for their son's birth, in a tub under a tree outside their home, they say they never planned for an "orgasmic" birth.

Haramein was amazed—and also relieved—to see his wife experience such pleasure.

"It made me feel like everything was gonna be all right," he said. "The experience didn't have to be a traumatic, painful experience. It could be an experience of ecstatic joy."

"It is, as we say, the best-kept secret," said Debra Pascali-Bonaro, a childbirth educator for 26 years. "I believe by women having such terrible fear. ... Women aren't getting the choices they need, to make the experience as easy as possible." *²¹

MENtAI iIINESS

Being treated
By one's family
Being treated and told by the teacher
Being treated and told
And labeled by psychiatry
That one is not equally worthy
Whose mental illness is it? *²²

Tarot

Q: How I can continue experiencing positively creative and spiritual breakthroughs, find a way to apply these insights and communicate ideas practically and constructively in the world around around me, discover how and where to best apply my curious and inquiring nature, be my true self unimpeded, and pursue my true path moving forward in a practical and abundant manner without the protection and safety of my immediate family upon which I'm dependent now?

Nine Of Cups

Sometimes you meet really happy people in life... Such a person is making an impact on YOU at the moment, and you are about to become such a person to others! There is a period of ease, productivity, and prosperity coming your way, and to profit from this, you have to allow a bit of yourself to be strong, and be comfortable.

Seven Of Swords

There are some things in life which are neither negotiable, nor worth negotiating... You get out of the way, you live to fight another day. You're dealing with someone/something which isn't fair nor reasonable, trying to put your under, or by threatening you. First, make sure you are protected. Natural justice will take care of itself. Your focus should be on an self-protection, intelligence, and what's happening now is not something you want to be a part of. You've got to side-step it.

King Of Swords

Is a benign character, in an intimidating and awe inspiring way... Feel like a school child summoned to the headmaster, or authority figure, who appear to know everything and you not. It could be a doctor, manager, etc You're feeling small dealing with powerful forces, and you need more information than you've got, and you need to be bigger than they are. You need to raise yourself UP! Either by understanding which you currently don't, or by getting help from an expert who does... Don't be afraid of the "big" experts in the big office, when you do, you'll have an intelligent conversation which will leave you much better off. Trust it will turn out this way!

Summary: You've drawn 3 cards which tells a story about 'giving something up', then 'going through a difficult process', and 'how does it end'? Strong, safe, successful. Trust your answer.

Issues

Respiratory organs i.e.: Lungs. To heal these back to their original capacity state, undo smoking damage.
Ears i.e.: Eardrums in particular. To heal these from damage caused by sinus blockages and scuba diving.
Allergies i.e.: Asthmatic reaction to various triggers. To heal the immune system from negative responses.
Intestines i.e.: Anxiety, fearful condition. To heal how I respond to triggers created by fearful experiences.
Flexibility i.e.: Limiting stiffness in my legs. To heal a limited lower body rigidity I've had since childhood.
Brain i.e.: Mental blockages caused by traumatic events. To enable active thinking, full conscious wisdom.
Intuition i.e.: Limited intuitive perception. To heal, develop an ability to intuitively 'know' without intellect.
Scalp i.e.: Flaking scalp, thinning, receding hair. To heal skin, and revitalize my hair, for water clean only.

World Bank

The researchers described the core as an “economic ‘super-entity’” that raises important issues for policymakers and researchers. Of course, the implications are enormous for citizens as well.

Hudes, an attorney who spent some two decades working in the World Bank’s legal department, has observed the machinations of the network up close. “I realized we were now dealing with something known as state capture, which is where the institutions of government are co-opted by the group that’s corrupt,” she told *The New American* in a phone interview. “The pillars of the U.S. government—some of them—are dysfunctional because of state capture; this is a big story, this is a big cover up.”

At the heart of the network, Hudes said, are 147 financial institutions and central banks—especially the Federal Reserve, which was created by Congress but is owned by essentially a cartel of private banks. “This is a story about how the international financial system was secretly gamed, mostly by central banks—they’re the ones we are talking about,” she explained. “The central bankers have been gaming the system. I would say that this is a power grab.”

The Fed in particular is at the very center of the network and the coverup, Hudes continued, citing a policy and oversight body that includes top government and Fed officials. Central bankers have also been manipulating gold prices, she added, echoing widespread concerns that *The New American* has documented extensively. Indeed, even the inaccurate World Bank financial statements that Hudes has been trying to expose are linked to the U.S. central bank, she said.

“The group that we’re talking about from the Zurich study—that’s the Federal Reserve; it has some other pieces to it, but that’s the Federal Reserve,” Hudes explained. “So the Federal Reserve secretly dominated the world economy using secret, interlocking corporate directorates, and terrorizing anybody who managed to figure out that they were having any kind of role, and putting people in very important positions so that they could get a free pass.”

The shadowy but immensely powerful Bank for International Settlements serves as “the club of these private central bankers,” Hudes continued. “Now, are people going to want interest on their country’s debts to continue to be paid to that group when they find out the secret tricks that that group has been doing? Don’t forget how they’ve enriched themselves extraordinarily and how they’ve taken taxpayer money for the bailout...”

“This is like crooks trying to figure out where they can go hide. It’s a mafia,” she said. “These culprits that have grabbed all this economic power have succeeded in infiltrating both sides of the issue, so you will find people who are supposedly trying to fight corruption who are just there to spread disinformation and as a placeholder to trip up anybody who manages to get their act together.... Those thugs think that if they can keep the world ignorant, they can bleed it longer...”

“The powers of financial capitalism had a far-reaching aim, nothing less than to create a world system of financial control in private hands able to dominate the political system of each country and the economy of the world as a whole,” wrote Prof. Quigley, who agreed with the goals but not the secrecy. “This system was to be controlled in a feudalist fashion by the central banks of the world acting in concert by secret agreements arrived at in frequent private meetings and conferences. The apex of the system was to be the Bank for International Settlements in Basel, Switzerland, a private bank owned and controlled by the world’s central banks which were themselves private corporations.”²³

Luciferian

"I am the daughter of a very senior member in the world-wide organization that rules this planet. I am told that I am a member too, by default, but I am against their plans. In order to stay in the loop, I play along by giving the impression that I'm in agreement with their Grand Plan. Or, at least, I show no overt resistance to it.

There is a lot I want to tell you but I have to say it without using certain terminology and phrases because I'm told there is security software used to search for certain keywords on the internet. I am not in fear of my life or safety because my father holds much too high a position in this organization. I will be choosy with my words because if they discover that I am "a leak" they will simply use technology to filter everything I communicate or block me from accessing certain websites altogether. I would like to get as much data as possible out in the public domain before I am (inevitably) discovered to be a leak.

I am just going to free-flow bits of data to you, all of which I have heard or overheard from members in this group. When speaking to each other, high-level members of the group are forbidden to misinform. When speaking to the general public, they ALWAYS misinform. No matter what they tell me, in my heart I AM NOT a member of this group and I stand against their plan now and always. Some of this information will not be new to you. Some of it definitely will be.

— The world-ruling group I speak of has many factions but the common denominator is that they all worship a (non-physical) entity called Lucifer. Lucifer is known by many other names too. Members of this group have undergone a procedure that makes it possible for them to be possessed by Lucifer at any given time. This procedure involves a human sacrifice. By "possessed", I mean that Lucifer can take over that group member's body and live his/her life for an indefinite amount of time. It is considered to be the ultimate privilege to act as a vessel for Lucifer. When I was much younger, my father acted as a vessel for a period of eleven days. I haven't witnessed that (with him) since then.

— Lucifer can take over and operate several members simultaneously. I'm told there is no limit to the number.

— Lucifer never animates a dead body because it is considered degrading to do so.

— Lucifer never enters the body of a person who does not agree to be entered, unless that person is in fear. Fear is considered to be agreement for entry.

— Lucifer's greatest pleasure is derived from fear because fear is the furthest emotion from love. Hate is not the furthest emotion from love because only in fear does a person relinquish power. A person who hates can still fight back.

— In order to heighten the sense of fear on this planet, their mass media is used to showcase chaos, confusion, death, destruction, pain, terror, etc. Each time you watch this, it lowers your vibration. Your vibration is raised when you connect with nature, loving people, and positive experiences. Gratitude is the fastest route to love.

— It is not true to say that ALL Freemasons, politicians and billionaires are members of this group. However, over the past 150 years, this group has infiltrated most international organizations so their influence IS everywhere. To spot members of this group you only have to do one thing: observe the results of their actions. Does the action bring about chaos, war, death or destruction? Any president who desires war is a member. Any corporation that suppresses human beings, contaminates the environment, promotes war & chaos, manufactures weapons, etc. has

members on its board. The key is to OBSERVE WITH YOUR EYES, NOT YOUR EARS. Telling you one thing and then doing another is simply to create confusion. The current US president is a perfect example of this.

— Accidents do happen so, in identifying members you look for a PATTERN of events coming from a source. Also, if an individual or corporation does cause a death or some destruction, how did they deal with it? Did they sweep it under the carpet or did they take full responsibility for it by making up for the damage and implementing policies to avoid it from reoccurring?

— Lucifer's Grand Plan is for all human beings on this planet to worship him. It is clear that only a small percentage will do this, therefore, billions of people are supposed to be killed. The Georgia Guidestones were erected by Luciferians.

— Luciferians believe they are the chosen ones. Everyone else is dispensable.

— Anyone who promotes depopulation is Luciferian. The cover story for depopulation is to stave off environmental destruction. My father once told me that this planet can easily withstand 100 billion people with the implementation of (non-public) available technology. This technology is not supposed to be released until after the Grand Plan has been carried out.

— Luciferians are not restricted to planet Earth. This is their biggest secret. Most of the planets in this solar system have settlements on them. Earth's moon has a mining operation on it. They refer to Earth as Space Station 33. This is what is revealed to a 33 degree Freemason.

— There are many levels of knowledge above the 33rd degree. Some of them pertain to interdimensional beings and alternate universes.

— There are numerous miraculous technologies being used (non-publicly) right now but the general public is not supposed to benefit from it because it would eliminate fear, slavery and scarcity. In other words, it would literally free the human race. These technologies have been withheld from the masses for thousands of years. It would be impossible to have total control over the masses if these technologies were released. I have personally seen two of these technologies. One of them can mock-up organized matter (e.g. an apple, a gun, a book, etc.) out of thin air. I was told that, basically, each 3-dimensional object is "printed" from a quantum file using atoms. Each file can print an infinite number of exact copies of an object. The atoms are gathered from a quantum field that exists all around us. The other device is similar except it generates only electricity from the same field. Free energy and free objects. This would eliminate the need for money, oil, farming, jobs, police, etc. People only fight when there is scarcity. I asked if a human being was ever created using that technology. I was told that it is restricted to objects in the mineral and vegetable kingdoms because they do not require souls to animate them.

— Denver International Airport was built by the Nazi faction of the group (The Skull & Bones Freemasons), which is headed by Queen Elizabeth II. Look at a satellite photo of Denver International Airport and you will see it is built in the shape of a swastika. Many of you are already familiar with the large mural in that airport which depicts mass genocide of all non-Luciferians, regardless of their race. That mural also contains Nazi imagery. At some point in the future, this airport is supposed to be the site of mass sacrifices—a gift to Lucifer.

— Many New Age groups have been created by this group in order to lull the masses into complacency. They are distinguished by a "Love and Light" attitude that promotes inaction. A perfect example is the (condescending) Galactic Federation of Light. It is your inaction that they are depending on.

— Luciferians want you to be apathetic toward your political system. There is a lot of concern right now about the direction the U.S. public is voting. Independent thinking (i.e., not voting for status-quo politicians) is threatening to the Luciferian agenda. Voting for individuals who fight for civil liberties and who want to shrink government to a manageable size will help the masses to a great extent.

There is so much more to say but, due to time, I will leave it for a subsequent posting.

If you have any questions, I will do my best to answer them (at some point) but please understand that I have to do it without using certain terminology that will draw attention." ²⁴

Principles of Our Republic Oath Keepers Are Sworn to Defend

As defenders of the Republic and guardians of the rights of the people, we affirm the timeless, self-evident truths set forth in our Declaration of Independence, which are at the very heart of our Republic:

- 1. All men are created equal and endowed by their creator with certain inalienable rights.** People are born with natural rights that come from nature and nature's God, not from government.
- 2. To secure these rights, Governments are instituted among Men.** Rights come first, and then comes government, not the other way around. Government is merely the creation of the people. The only legitimate purpose of government is to protect our rights.
- 3. Governments derive their just powers from the consent of the governed.** Governments have no inherent or intrinsic powers – only those granted by the people. When governments claim powers never granted, such government is illegitimate.
- 4. Whenever any Form of Government becomes destructive of these ends, it is the Right of the People to alter or to abolish it, and to institute new Government.** When the government violates the people's rights, it violates its only legitimate purpose and voids the compact by which the people created that government. The people retain the right to decide when that has happened, and retain the right to throw off such oppressive government, just as our forefathers did in the American Revolution.
- 5. Governments long established should not be changed for light and transient causes.** And that is why the American people have continued to try and work within the system despite a relentless, sustained assault on their rights.
- 6. But when a long train of abuses and usurpations, pursuing invariably the same object evinces a design to reduce them under absolute Despotism** Among the abuses and usurpations were:

[the national government] "declaring themselves invested with power to legislate for us in all cases whatsoever," erecting "a multitude of New Offices," and sending "swarms of Officers to harass our people and eat out their

substance"; Denial of jury trial, with trial instead by admiralty courts (military tribunals); warrantless searches (the writs of assistance); confiscation of property; Imposition of martial law – the suspension of legislatures and the appointment of a general to rule the people, rendering "the Military independent of and superior to the Civil Power."

The final spark of Revolution was an attempt to disarm the people during martial law, which was an act of war against the people. The parallels to our time are obvious and ominous.

7. ... it is their right, it is their duty, to throw off such Government. Again, the people themselves will determine when that point has been reached. We cannot expect the national government's own courts to approve of that decision by the people. Every dictator throughout history, be it Hitler, Mussolini, Stalin, Mao, Pol Pot, or Pinochet, twisted and perverted the law and the courts into a weapon against the people. In our own history, every oppressive act of Parliament and the King in the years leading up to the Revolution were upheld by the English courts. But that was not the end of the argument. The same is true today.

After the Revolution, those principles were again affirmed and made part of our Constitution by the adoption of the Bill of Rights.

When you read the Bill of Rights, remember that each and every one of those amendments was in response to the Founding Generation's experience with government tyranny, and were intended to prevent such tyranny from happening again. The Bill of Rights thus tracks nearly exactly the causes of Revolution listed in the Declaration of Independence.

In particular, pay close attention to the Ninth and Tenth Amendments, which affirm the natural rights and sovereignty of the people, and which provide a guide to constitutional interpretation, as I will further explain in an upcoming post.

Each of you must remind yourself of those hard learned lessons, renew your understanding of the principles of American liberty, and how those principles are reflected in the Constitution and Bill of Rights you swore an oath to defend.

And then you must search your soul and arrive at your own personal line in the sand.

Keep your oath. ^{*25}

Wave of Stillness

Meditation creates a circular wave of stillness, amid an ocean of turbulent motions. Where one centers, in its vicinity the ocean begins to calm, allowing an area around one to flatten even, as if the water just in that space were without a storm and foreign interference. The more one practices meditation, the greater the area impacted by the stillness creation, at first barely influencing the treacherous waters to diminish, but over time, having such impact that a growing sphere of influence establishes a boundary around one. This soft border will allow approaching waves to reduce their momentum and size long before reaching you, giving the impression that these powerful conditions are moving ever further away. It will take a considerable time to adjust one's state of mind and awareness, for at first the waves may appear overwhelming, when one awakens to the realization that these have been the cause of much of one's suffering to begin with.

It will be difficult to remain focused on calm, as big waves approach and sometimes break over you, throwing your progress back, but still you must remain through it, keeping an eye on the idea and prize of peace being within you, and not externally provided nor co-ordinated by others (trying to change the world). It is strictly within you, as you learn to grasp the significance of each wave, where its source of distortions originates, and face the reality of its existence; not as something which you have no control over, nor ability to impact, but as something which you can recognize for what it expresses, why it exists, and which you can contain through your response, which then reduces its ability to influence and affect you at all. For once you begin to awaken to your truth, to your own power to influence the waves imposing around you, that's when you begin to truly take control of your life through your spirit, and not responding to the whims of your emotions through a longing heart, or materialistic desires of a faithless mind. By learning to balance against these.

Choose one of two options:

- Go along the waves and propel yourself to experience life to its fullest, externalized projection.
- Learn to recognize these waves impacting your life, take control by negating these to stillness.

You have a choice.

Biophotons

The Human Body Emits, Communicates with, and is Made from Light

Increasingly science agrees with the poetry of direct human experience: we are more than the atoms and molecules that make up our bodies, but beings of light as well. Biophotons are emitted by the human body, can be released through mental intention, and may modulate fundamental processes within cell-to-cell communication and DNA.

Nothing is more amazing than the highly improbable fact that we exist. We often ignore this fact, oblivious to the reality that instead of something there *could* be nothing at all, i.e. why is there a universe (poignantly aware of itself through us) and not some void completely unconscious of itself?

Consider that from light, air, water, basic minerals within the crust of the earth, and the at least 3 billion year old information contained within the nucleus of one diploid zygote cell, the human body is formed, and within that body a soul capable of at least trying to comprehend its bodily and spiritual origins.

Given the sheer insanity of our existential condition, and bodily incarnation as a whole, and considering that our earthly existence is partially formed from sunlight and requires the continual consumption of condensed sunlight in the form of food, it may not sound so farfetched **that our body emits light**.

Indeed, the human body emits biophotons, also known as ultraweak photon emissions (UPE), with a visibility 1,000 times lower than the sensitivity of our naked eye. While not visible to us, these particles of light (or waves, depending on how you are measuring them) are part of the visible electromagnetic spectrum (380-780 nm) and are detectable via sophisticated modern instrumentation.

The Physical and “Mental” Eye Emits Light

The eye itself, which is continually exposed to ambient powerful photons that pass through various ocular tissues, emit spontaneous and visible light-induced ultraweak photon emissions. It has even been hypothesized that visible light induces delayed bioluminescence within the exposed eye tissue, providing an explanation for the origin of the negative afterimage.

These light emissions have also been correlated with cerebral energy metabolism and oxidative stress within the mammalian brain. And yet, biophoton emissions are not necessarily epiphenomenal. Bókkon’s hypothesis suggests that photons released from chemical processes within the brain produce biophysical pictures during visual imagery, and a recent study found that when subjects actively imagined light in a very dark environment their intention produced significant increases in ultraweak photo emissions. This is consistent with an emerging view that biophotons are not solely cellular metabolic by-products, but rather, because biophoton intensity can be considerably higher inside cells than outside, it is possible for the mind to access this energy gradient to create intrinsic biophysical pictures during visual perception and imagery.

Our Cells and DNA Use Biophotons To Store and Communicate Information

Apparently biophotons are used by the cells of many living organisms to communicate, which facilitates energy/information transfer that is several orders of magnitude faster than chemical diffusion. According to a 2010 study, “Cell to cell communication by biophotons have been demonstrated in plants, bacteria, animal neutrophil granulocytes and kidney cells.” Researchers were able to demonstrate that “...different spectral light stimulation (infrared, red, yellow, blue, green and white) at one end of the spinal sensory or motor nerve roots resulted in a significant increase in the biophotonic activity at the other end.” Researchers interpreted their finding to suggest that “...light stimulation can generate biophotons that conduct along the neural fibers, probably as neural communication signals.”

Even when we go down to the molecular level of our genome, DNA can be identified to be a source of biophoton emissions as well. One author proposes that DNA is so biophoton dependent that it has excimer laser-like properties, enabling it to exist in a stable state far from thermal equilibrium at threshold.

Technically speaking a biophoton is an elementary particle or quantum of light of non-thermal origin in the visible and ultraviolet spectrum emitted from a biological system. They are generally believed to be produced as a result of energy metabolism within our cells, or more formally as a “...by-product of biochemical reactions in which excited molecules are produced from bioenergetic processes that involves active oxygen species.”

The Body’s Circadian Biophoton Output

Because the metabolism of the body changes in a circadian fashion, biophoton emissions also variate along the axis of diurnal time. Research has mapped out distinct anatomical locations within the body where biophoton emissions are stronger and weaker, depending on the time of the day:

Generally, the fluctuation in photon counts over the body was lower in the morning than in the afternoon. The thorax-abdomen region emitted lowest and most constantly. The upper extremities and the head region emitted most and increasingly over the day. Spectral analysis of low, intermediate and high emission from the superior frontal part of the right leg, the forehead and the palms in the sensitivity range of the photomultiplier showed the

major spontaneous emission at 470-570 nm. The central palm area of hand emission showed a larger contribution of the 420-470 nm range in the spectrum of spontaneous emission from the hand in autumn/winter. The spectrum of delayed luminescence from the hand showed major emission in the same range as spontaneous emission.

The researchers concluded that "The spectral data suggest that measurements might well provide quantitative data on the individual pattern of peroxidative and anti-oxidative processes in vivo."

Meditation and Herbs Affect Biophoton Output

Research has found an oxidative stress-mediated difference in biophoton emission among meditators versus non-meditators. Those who meditate regularly tend to have lower ultra-weak photon emission (UPE, biophoton emission), which is believed to result from the lower level of free radical reactions occurring in their bodies. In one clinical study involving practitioners of transcendental meditation (TM) researchers found:

The lowest UPE intensities were observed in two subjects who regularly meditate. Spectral analysis of human UPE has suggested that ultra-weak emission is probably, at least in part, a reflection of free radical reactions in a living system. It has been documented that various physiologic and biochemical shifts follow the long-term practice of meditation and it is inferred that meditation may impact free radical activity.

Interestingly, an herb well-known for its use in stress reduction (including inducing measurable declines in cortisol), and associated heightened oxidative stress, has been tested clinically in reducing the level of biophotons emitted in human subjects. Known as rhodiola, a study published in 2009 in the journal *Phytotherapeutic Research* found that those who took the herb for 1 week had a significant decrease in photon emission in comparison with the placebo group.

Human Skin May Capture Energy and Information from Sunlight

Perhaps most extraordinary of all is the possibility that our bodily surface contains cells capable of efficiently trapping the energy and information from ultraviolet radiation. A study published in the *Journal of Photochemistry and Photobiology* in 1993, titled, "Artificial sunlight irradiation induces ultraweak photon emission in human skin fibroblasts," discovered that when light from an artificial sunlight source was applied to fibroblasts from either normal subjects or with the condition xeroderma pigmentosum, characterized by deficient DNA repair mechanisms, it induced far higher emissions of ultraweak photons (10-20 times) in the xeroderma pigmentosum group. The researchers concluded from this experiment that "These data suggest that xeroderma pigmentosum cells tend to lose the capacity of efficient storage of ultraweak photons, **indicating the existence of an efficient intracellular photon trapping system within human cells.**" More recent research has also identified measurable differences in biophoton emission between normal and melanoma cells.

In a previous article, Does Skin Pigment Act Like A Natural Solar-Panel, we explored the role of melanin in converting ultraviolet light into metabolic energy:

Melanin is capable of transforming ultraviolet light energy into heat in a process known as "ultrafast internal conversion"; more than 99.9% of the absorbed UV radiation is transformed from potentially genotoxic (DNA-damaging) ultraviolet light into harmless heat.

If melanin can convert light into heat, could it not also transform UV radiation into other biologically/metabolically useful forms of energy? This may not seem so farfetched when one considers that even gamma radiation, which is highly toxic to most forms of life, is a source of sustenance for certain types of fungi and bacteria...

Gerald Pollack, PhD, who wrote The 4th Phase of Water has identified water molecules, which constitute 99% of the molecules in our body by number, as capable of storing the energy of sunlight like batteries and driving the majority of processes within our body as a primary, non-ATP-based source of energy.

The Body's Biophoton Outputs Are Governed by Solar and Lunar Forces

It appears that modern science is only now coming to recognize the ability of the human body to receive and emit energy and information directly from the light given off from the Sun.

There is also a growing realization that the Sun and Moon affect biophoton emissions through gravitational influences. Recently, biophoton emissions from wheat seedlings in Germany and Brazil were found to be synchronized transcontinentally according to rhythms associated with the lunisolar tide. In fact, the lunisolar tidal force, to which the Sun contributes 30 % and the Moon 60 % of the combined gravitational acceleration, has been found to regulate a number of features of plant growth upon Earth.

Intention Is a Living Force of Physiology

Even human intention itself, the so-called ghost in the machine, may have an empirical basis in biophotons. A recent commentary published in the journal *Investigacion clinica* titled "Evidence about the power of intention" addressed this connection:

Intention is defined as a directed thought to perform a determined action. Thoughts targeted to an end can affect inanimate objects and practically all living things from unicellular organisms to human beings. The emission of light particles (biophotons) seems to be the mechanism through which an intention produces its effects. All living organisms emit a constant current of photons as a mean to direct instantaneous nonlocal signals from one part of the body to another and to the outside world. Biophotons are stored in the intracellular DNA. When the organism is sick changes in biophotons emissions are produced. Direct intention manifests itself as an electric and magnetic energy producing an ordered flux of photons. Our intentions seem to operate as highly coherent frequencies capable of changing the molecular structure of matter. For the intention to be effective it is necessary to choose the appropriate time. In fact, living beings are mutually synchronized and to the earth and its constant changes of magnetic energy. It has been shown that the energy of thought can also alter the environment. Hypnosis, stigmata phenomena and the placebo effect can also be considered as types of intention, as instructions to the brain during a particular state of consciousness. Cases of spontaneous cures or of remote healing of extremely ill patients represent instances of an exceedingly great intention to control diseases menacing our lives. The intention to heal as well as the beliefs of the sick person on the efficacy of the healing influences promote his healing. In conclusion, studies on thought and consciousness are emerging as fundamental aspects and not as mere epiphenomena that are rapidly leading to a profound change in the paradigms of Biology and Medicine.

So there you have it. Science increasingly agrees with direct human experience: we are more than the atoms and molecules of which we are composed, but beings that emit, communicate with, and are formed from light.^{*26}

Unconditional

Willing to experience aloneness,
I discover connection everywhere;
Turning to face my fear,
I meet the warrior who lives within;
Opening to my loss,
I gain the embrace of the universe;
Surrendering into emptiness,
I find fullness without end.

Each condition I flee from pursues me,
Each condition I welcome transforms me
And becomes itself transformed
Into its radiant jewel-like essence.
I bow to the one who has made it so,
Who has crafted this Master Game;
To play it is purest delight;
To honor its form—true devotion. ^{*27}

Before You Can Fight

Activist and author Naomi Klein tells a story about the time she traveled to Australia at the request of Aboriginal elders. They wanted her to know about their struggle to prevent white people from dumping radioactive wastes on their land.

Her hosts brought her to their beloved wilderness, where they camped under the stars. They showed her "secret sources of fresh water, plants used for bush medicines, hidden eucalyptus-lined rivers where the kangaroos come to drink."

After three days, Klein grew restless. When were they going to get down to business?

"Before you can fight," she was told, "you have to know what you are fighting for." ^{*28}

This is the Most Important Issue Facing America Right Now

America's nuclear industry was purposefully set up to be a weapon that can destroy the country.

"Federal government" BUSTED for forcing American nuclear industry to become a ticking time bomb.

Americans have been told their nuclear waste must go somewhere. Americans have been told their spent reactor fuel needs to be stored inside a mountain in the desert, where it will sit as a threat and menace to the world for millions of years. Americans have been told there is nothing they can do about it. But what if they have been told a

lie? What if that "spent fuel" was not spent at all? What if a technology existed which allowed the same fuel to be used over and over, twenty times in fact, and expended so fully that fuel rods would be safe enough to handle directly out of the reactor? Think any "spent fuel pools" would be full? **And even if this technology never existed,**

What if foreign nations, (France was one) offered to buy this fuel from America for billions of dollars only to have the American Government refuse the offer for no reason at all? Certainly allowing France to have it would solve the problem of getting rid of it. And the final question, WHY would the American Government want so much nuclear material sitting around the country—enough to make countless atomic bombs—only to have it become a threat to America's national security? *Could it be that for many years America has not had a legitimate government, and instead has had a band of invaders in power who have intentionally set America up for a fall?*

After reading this report, I believe you will be inclined to think so.

This report consists of hard scientific fact and even harder answers.

During my journey of discovery in my investigation into the Fukushima disaster, I interviewed an 85 year old nuclear engineer who worked in the nuclear industry during America's glory days, an engineer who earned GE over 100 patents. He was one of the engineers who designed Fukushima, so naturally when conducting an investigation into such a disaster a journalist would want that type of reference. He was surprised when my prior study of reactor systems was so thorough that he had no information about Fukushima I did not already dig up, and he was very surprised when I told him details about the inner workings of his own reactor design he never expected anyone in the media to know.

When I started to think I was going to walk away with nothing new, he began to talk about an entirely different subject. He began his new direction in the discussion with the phrase "**My team succeeded in closing the nuclear loop, and Carter banned our miracle with an executive order.**"

Here is what followed that introductory line, and an enormous reason why Americans need to seriously question the current government structure and possibly start over.

"I started in the American nuclear program all the way back at the time of the Manhattan project, and have been involved in reactor design and nuclear engineering my whole life. There was one answer we all searched for, and it was how to close the nuclear loop.

When a reactor such as a boiling water reactor uses fuel, the waste products, which are highly radioactive isotopes that have a different fission characteristic than the original fuel, build up in the fuel and change the nature of the nuclear reaction. A reactor such as a boiling water reactor can only use the fuel until it gets contaminated by these isotopes enough to change the nature of the nuclear reactions taking place. The reaction environment inside a boiling water reactor is only one such environment which will work to trigger a chain reaction, and if that spent fuel is put into a reactor made from different materials, those materials can favor the burning of the isotopes which interfere with the chain reactions in the boiling water reactor and use these interfering isotopes as fuel until they are consumed. After this process, which restores the fuel to its original state is complete, the fuel can go back into the boiling water reactor and used as new with no reprocessing—the exact same rods can be exchanged between reactors.

We perfected the second reactor design which used liquid sodium as a coolant and the reactor ran much hotter—1100 farenheit as opposed to 550 in a boiling water reactor. The liquid sodium circulated inside the reactor instead of water, with the heat of the reaction being removed from the system by a heat exchanger which produced steam outside the reactor for use in producing electricity. The temperature difference and coolant characteristics in the complimentary reactor facilitated the burning of the isotopes, and you got to use both sides of the reaction—the boiling water reactor produced electricity while producing unwanted isotopes, and the sodium cooled reactor produced electricity while burning the unwanted isotopes out. This process could be repeated 20 times, and when it was finished the fuel was DEAD and no longer hazardous because all of its radiological potential was used up. It was a clean energy dream come true, and Carter banned it by executive order!

He specifically stated that the burn down was so complete that the spent fuel was safe to handle directly with bare hands, and needed no special care or maintenance at all, and after I questioned him about exactly how safe, said you could safely sleep on it. I questioned him several times, saying he must be exaggerating, but he said ALL radiological potential was used, and the fuel was completely inert at the end of the final cycle.

Many people know about the liquid sodium breeder reactor developed by General Electric in the late 1970's but few people know the real story about this reactor, which this engineer developed. To back stab the public image of this reactor, it was stated that its rods would stick and that liquid sodium was too dangerous to use as a coolant. But this engineer, the man who developed it, stated that this media campaign was a pure psy op which like many things the media and government says had no truth to it at all.

He then went on to lament about what a waste of money it was to have the technology banned because nuclear fuel is expensive and they were only able to use it to about five percent of its total potential without implementing this technology. He lamented the fact that his life's greatest accomplishment got banned for no good reason, and it was a tremendous waste of money to not use the technology his team developed. Electricity would have been cheap. So cheap that homes would not have been heated with oil or natural gas, electricity would have been the only sensible choice. Furthermore, with a reduction in the price of electricity by at least 10X, electric cars would have quickly become a standard.

This would have been America's free energy future, with the only real cost being maintenance of infrastructure.

He was sad that we were now paying too much for electricity. I guess that's how an engineer thinks. He had read my article about Fukushima and liked it, so it is an easy guess that his eyes were open to the global conspiracy. But I think he missed the obvious in what he said.

Here is what I think about this technology being banned, and it has nothing to do with preservation of resources or free energy.

Nuclear reactors are huge. They have an enormous amount of nuclear material in them. One boiling water reactor core the size of the ones at Fukushima, which have a thermal potential of three gigawatts and an electrical generating capacity of one gigawatt can easily hold enough fissionable material to make many atomic bombs. *And with the technology that makes re-using that fuel illegal, it builds up in the cooling pools at a rate of 25 tons per electrical gigawatt YEAR.* This means that after 40 years of fuel buildup even small 500 megawatt facilities have

approximately a million pounds of highly radioactive fuel sitting in their pools waiting for the right combination of problems to cause a disaster.

Because the Japanese were at least allowed by their government to use a reprocessing technology inferior to what this engineer spoke of, Fukushima only had approximately 250,000 pounds of "spent" fuel at each reactor site, which remained intact throughout the disaster. But because in America no reprocessing is allowed at all in any form, the Fukushima equivalents in America, such as TVA operated Browns Ferry and NSP operated Prairie Island have no fewer than two million pounds of "spent" fuel at each reactor site, which means that Browns Ferry alone could, in a worst case scenario, far exceed the damage done by Fukushima.

Contrary to what the scamming mainstream press has reported, Fukushima reactor 3 was destroyed entirely while at 3,000 PSI (far beyond specifications) which resulted in a complete core expulsion. This threw approximately 100,000 pounds of fuel into the environment, much of it in the form of brown dust that badly contaminated the entire surrounding area and was found around the world. At 100,000 pounds of expelled material, reactor 3 could have produced at most 2 percent of the total contamination possible from a large American nuclear facility. This puts the possible disaster from Browns Ferry at 50 to 100 times worse than Fukushima. Multiply that by Prairie Island and the over 100 other similar sized nuclear facilities in America and it is not hard to calculate that a serious national security threat exists.

When GE and others designed the nuclear facilities both in America and abroad, they had calculated that they would indeed succeed in closing the nuclear loop. So they designed the nuclear facilities with an approximate 20X safety margin in the fuel pools, because they did not have a clear date on when the technology would be perfected. It was my impression from this engineer that they got it sooner than expected. So fortunately the fuel pools were over built, but despite being over built **they were never designed to withstand the fuel burdens that would result from a political decision to destroy the closed loop fuel cycle technology altogether.**

So now, 40 years after the ban, America has fuel pools around the country that are so full that they have exceeded even the extremely generous safety margins they were originally designed to have, and even modest pools often have over 400 tons of highly active isotope ridden "spent" fuel in them.

Having functional fuel pool cooling systems was never intended to be necessary. GE and others wanted only a fractional core worth of fuel sitting in a pool at any one time, with at most one or two entire cores, not 15 or 20. If all cooling systems failed with only the intended maximum of one or two cores sitting in a pool there would be no boiling of the water in the pool, no pending disaster possible from equipment failure no matter how severe. But the way it is now, if there is any sort of attack or disaster which prevents fuel pool maintenance at any of the facilities in America for a period exceeding three days, the water will boil off, the fuel will catch fire and a nuclear disaster of unimaginable magnitude far in excess of Fukushima will take place. **And it never needed to be this way, in fact, the situation is criminal.**

Foreign nations offered help, but the American government said NO

Upon recognizing the lunacy of America's Federally mandated nuclear sabotage, countries like France and Germany stepped forward to buy America's 5% spent fuel for billions of dollars. They were not held political hostage by a hostile government, and could certainly use a source of cheap fuel. But rather than accept this offer, the American government mandated NO transport of the fuel to foreign nations, no further use whatsoever. American nuclear facilities were forced by Federal regulation to use approximately 5 percent of the fuel's radiological potential,

leaving 95 percent of the radiological hazard remaining, and subsequently forced to keep it in a fuel pool that needs continuous maintenance. While arguing against this report, shills have said it was the import/export restrictions which caused such a dangerous situation in America, but since those laws were written by the same government that banned the closing of the "nuclear loop", the export restrictions are only a further indictment of the FED for causing this problem.

Simultaneous with the intentional building of the threat from having so much nuclear material sitting around came all the government scandals and lies about needing to put the fuel somewhere. Inside a mountain in the desert. Inside a dry cask. Maybe in the ocean, all the while the general American public was kept oblivious to the obvious answer: If we are not allowed to use it because of a nonsensical piece of legislation, why not let someone else have it, when they are willing to **even pay for it?**

Here is what I believe is the answer. And this answer needs to be spread far and wide.

Whatever you think of Kennedy, on the day of his death he was our last hope. No one since has been anything other than an enemy infiltrator, **The enemy is not only inside the gates, it has been taking a paycheck from the American people for over 45 years.**

Consider this: America's government intentionally put in place policies that de-industrialized America. That's an act of war. The American government put in place policies that intentionally destroyed America's schools. That's an act of war. And I consider forcing via mandate the buildup of hundreds of thousands, if not millions of nuclear warheads worth of perfectly good reactor fuel just waiting for a disaster to be an act of war as well—Only an enemy would intentionally mandate the creation of such a threat, who on earth would, other than someone who hated America? Not only did America lose a marvelous clean virtually free energy future, that future got converted into a threat that could very easily destroy the nation and take much of the world with it. All it would take to kill America, with America's nuclear facilities drastically overloaded with spent fuel, is 150 smart bombs. One successful bombing run and it is over. And that's not even taking into consideration other disaster scenarios, such as earthquakes and computer virus attacks.

Ever since Kennedy's assassination America has not had a true representative government, especially starting with Carter. With a scammed vote, America got over-run by outsiders who wanted the country destroyed. Prior to 1973 America was only going upward, and anyone who wanted to see America destroyed would never permit Americans to get virtually free energy. They would lose oil profits. They would potentially lose control of energy, leaving the financial system the only means of forced social compliance outside of a hot war and they wanted options. True clean energy had to go.

The enemy of America is a sinister enemy. It is a small group of religiously "elite" people who weaponize everything. They have weaponized sympathy, victim status, water systems, vaccines, genetically modified organisms and even terror—anything they have been able to think of, and have used these things and many more to destroy. So the nuclear industry, now blocked from a dream come true technology, can be used as a weapon.

There is plenty of proof. No shill can stop people from checking out the history of other nations, such as Germany, France and Russia offering America BILLIONS for this not so "spent" fuel, which can only sit as a hazard after a political decision banning technologies which allow for its purification at the same time additional political decisions have banned its export. This hazard has been unnecessarily and intentionally accumulating for years. It's the equivalent of keeping a 5,000 gallon tank of petrol in your bedroom. Better hope all is well with it.

I honestly feel that banning this miracle technology; you should have heard the sparkle, the awe in the old man's voice when he said they closed the "nuclear loop", and the sadness, despair and anger expressed at it's being banned; I feel it was an act of war against America. There were never any accidents associated with this technology, according to this engineer everything negative said about it was a bold faced lie spoken by people of ill intent. The nuclear waste problem is not scientific, it is political.

I believe this nuclear engineer opened up and told me about this because I was the first journalist he ever encountered that actually understood nuclear technology. He knew I would understand what he said and subsequently bring this story to the public. But outside of making the public aware by telling his story in an article such as this, what more can I do?

America's nuclear industry could easily be the weapon that finally kills the country. ^{*29}

545 vs. 300,000,000 People

The following is Charlie Reese's final column for the Orlando Sentinel, written in 1984.

Politicians are the only people in the world who create problems and then campaign against them.

Have you ever wondered, if both the Democrats and the Republicans are against deficits, WHY do we have deficits?

Have you ever wondered, if all the politicians are against inflation and high taxes, WHY do we have inflation and high taxes?

You and I don't propose a federal budget. The President does.

You and I don't have the Constitutional authority to vote on appropriations. The House of Representatives does.

You and I don't write the tax code, Congress does.

You and I don't set fiscal policy, Congress does.

You and I don't control monetary policy, the Federal Reserve Bank does.

One hundred senators, 435 congressmen, one President, and nine Supreme Court justices equates to 545 human beings out of the 300 million are directly, legally, morally, and individually responsible for the domestic problems that plague this country.

I excluded the members of the Federal Reserve Board because that problem was created by the Congress. In 1913, Congress delegated its Constitutional duty to provide a sound currency to a federally chartered, but private, central bank.

I excluded all the special interests and lobbyists for a sound reason. They have no legal authority. They have no ability to coerce a senator, a congressman, or a President to do one cotton-picking thing. I don't care if they offer a

politician \$1 million dollars in cash. The politician has the power to accept or reject it. No matter what the lobbyist promises, it is the legislator's responsibility to determine how he votes.

Those 545 human beings spend much of their energy convincing you that what they did is not their fault. They cooperate in this common con regardless of party.

What separates a politician from a normal human being is an excessive amount of gall. No normal human being would have the gall of a Speaker, who stood up and criticized the President for creating deficits. The President can only propose a budget. He cannot force the Congress to accept it.

The Constitution, which is the supreme law of the land, gives sole responsibility to the House of Representatives for originating and approving appropriations and taxes. Who is the speaker of the House? John Boehner. He is the leader of the majority party. He and fellow House members, not the President, can approve any budget they want. If the President vetoes it, they can pass it over his veto if they agree to.

It seems inconceivable to me that a nation of 300 million cannot replace 545 people who stand convicted—by present facts—of incompetence and irresponsibility.. I can't think of a single domestic problem that is not traceable directly to those 545 people. When you fully grasp the plain truth that 545 people exercise the power of the federal government, then it must follow that what exists is what they want to exist.

If the tax code is unfair, it's because they want it unfair.

If the budget is in the red, it's because they want it in the red.

If the Army & Marines are in Iraq and Afghanistan it's because they want them in Iraq and Afghanistan.

If they do not receive social security but are on an elite retirement plan not available to the people, it's because they want it that way.

There are no insoluble government problems.

Do not let these 545 people shift the blame to bureaucrats, whom they hire and whose jobs they can abolish; to lobbyists, whose gifts and advice they can reject; to regulators, to whom they give the power to regulate and from whom they can take this power. Above all, do not let them con you into the belief that there exists disembodied mystical forces like "the economy," "inflation," or "politics" that prevent them from doing what they take an oath to do.

Those 545 people, and they alone, are responsible.

They, and they alone, have the power.

They, and they alone, should be held accountable by the people who are their bosses.

Provided the voters have the gumption to manage their own employees.

We should vote all of them out of office and clean up their mess.

Tax his land,
Tax his bed,
Tax the table,
At which he's fed.

Tax his tractor,
Tax his mule,
Teach him taxes
Are the rule.

Tax his work,
Tax his pay,
He works for
peanuts anyway!

Tax his cow,
Tax his goat,
Tax his pants,
Tax his coat.

Tax his ties,
Tax his shirt,
Tax his work,
Tax his dirt.

Tax his tobacco,
Tax his drink,
Tax him if he
Tries to think.

Tax his cigars,
Tax his beers,
If he cries
Tax his tears.

Tax his car,
Tax his gas,
Find other ways
Taxes to pass

Tax all he has
Then let him know
That you won't be done
Till he has no dough.

When he screams and hollers;

Then tax him some more,
Tax him till
He's good and sore.

Then tax his coffin,
Tax his grave,
Tax the sod in
Which he's laid...

Put these words
Upon his tomb,
'Taxes drove me
to my doom...'

When he's gone,
Do not relax,
It's time to apply
The inheritance tax.

Accounts Receivable Tax
Building Permit Tax
CDL license Tax
Cigarette Tax
Corporate Income Tax
Dog License Tax
Excise Taxes
Federal Income Tax
Federal Unemployment Tax (FUTA)
Fishing License Tax
Food License Tax
Fuel Permit Tax
Gasoline Tax (currently 44.75 cents per gallon)
Gross Receipts Tax
Hunting License Tax
Inheritance Tax
Inventory Tax
IRS Interest Charges IRS Penalties (tax on top of tax)
Liquor Tax
Luxury Taxes
Marriage License Tax
Medicare Tax
Personal Property Tax
Property Tax
Real Estate Tax
Service Charge Tax
Social Security Tax

Road Usage Tax
 Recreational Vehicle Tax
 Sales Tax
 School Tax
 State Income Tax
 State Unemployment Tax (SUTA)
 Telephone Federal Excise Tax
 Telephone Federal Universal Service Fee Tax
 Telephone Federal, State and Local Surcharge Taxes
 Telephone Minimum Usage Surcharge Tax
 Telephone Recurring and Nonrecurring Charges Tax
 Telephone State and Local Tax
 Telephone Usage Charge Tax
 Utility Taxes
 Vehicle License Registration Tax
 Vehicle Sales Tax
 Watercraft Registration Tax
 Well Permit Tax
 Workers Compensation Tax

Not one of these taxes existed 100 years ago, and our nation was the most prosperous in the world. We had absolutely no national debt, had the largest middle class in the world, and Mom stayed home to raise the kids.

What in the heck happened? Can you spell 'politicians'?

I hope this goes around THE USA at least 545 times! YOU can help it get there!!!

GO AHEAD... BE AN AMERICAN.

Death and Taxes

"The freedoms won by Americans in 1776 were lost in the revolution of 1913..." *34

... First of all, Paul had a reason for mentioning 1913; the 16th Amendment to the Constitution was ratified that year, legalizing a federal income tax, and Congress approved legislation enacting one. The 1913 law imposed a tax of 1 percent on income up to \$20,000, for both individual and joint filers. However, exemptions from the tax—the first \$3,000 of income for individuals and the first \$4,000 for joint filers—meant "virtually all middle-class Americans" were excused from paying, according to W. Elliot Brownlee's book, *Federal Taxation in America*. The law also put in place a graduated surtax on incomes above \$20,000; the highest rate paid, 7 percent, applied to Americans making more than \$500,000 (about \$11.4 million in 2011 dollars).

The amendment's ratification came nearly two decades after the U.S. Supreme Court in 1895 voided an income tax that Congress had approved a year earlier. That tax never took effect. The court declared the tax unconstitutional because it was not apportioned according to the population of each state, as the Constitution then required. That meant, for example, that if 5 percent of the U.S. population lived in Virginia, no more than 5 percent of the tax's total revenue could come from Virginia.

The 16th Amendment removed this barrier by authorizing Congress to collect taxes on incomes "without apportionment among the several states, and without regard to any census or enumeration." *35

"If it smells like you're being cheated, feels like you're being cheated and looks like you're being cheated, take it for granted. You're being cheated. Don't let it continue." — Common Sense

The Dream and the Nightmare of Globalization

After World War II, only the United States possessed the capital, the military, freedom, and the international good will to arrest the spread of global Stalinism. To save the fragile postwar West, America was soon willing to rebuild and rearm war-torn former democracies. Over seven decades, it intervened in proxy wars against Soviet and Chinese clients, and radical rogue regimes. It accepted asymmetrical and unfavorable trade as the price of leading and saving the West. America became the sole patron for dozens of needy clients—with no time limit on such asymmetry.

Yet what would become the globalized project was predicated on lots of flawed, but unquestioned assumptions:

The great wealth and power of the United States was limitless. It alone could afford to subsidize other nations. Any commercial or military wound was always considered superficial and well worth the cost of protecting the civilized order.

Only by piling up huge surpluses with the United States and avoiding costly defense expenditure through American military subsidies, could the shattered nations of Asia and Europe supposedly regain their security, prosperity and freedom. There was no shelf life on such dependencies.

American popular culture, democracy, and free-market consumer capitalism would spread beyond the West. It created a new world order of sameness and harmony—predicated on the idea that the United States must ensure, at great costs, free trade, free commerce, free travel, and free communications in a new interconnected global world. The more American largess, the more likely places from Shanghai to Lagos would eventually operate on the premises of Salt Lake City or Los Angeles. The world would inevitably reach the end of history as something like Palo Alto, the Upper West Side, or Georgetown.

Open borders would draw into America—and later Europe and the former British Commonwealth—the world's poor, uneducated, and dispossessed, who would become model citizens and reinforce the global resonance of the West. Although many of the liberal architects of diversity did not welcome political diversity at all, and sought to avoid the ramifications of their ideas in the concrete, nonetheless the borders of the West became and stayed open. An orthodoxy arose that it was racist, xenophobic, or nativist to question illegal, mass, non-diverse, and non-meritocratic immigration into the West. Ideas that mass illegal immigration undercut citizen workers, drove down wages, and negatively affected the citizen poor were derided as cheap bias and ignorance.

The end result of the last seven decades was a far more prosperous world of 7.6 billion than was ever thought imaginable. Stalin's nightmare collapsed. So did Mao's—sort of. Radical Islam was checked. The indigent in the Amazon Basin got access to eyeglasses. Amoxicillin made its way into Chad. And Beyoncé could be heard in Montenegro. The impoverished from Oaxaca became eligible for affirmative action the moment they crossed the U.S. border. Europe no longer tore itself apart every 20-50 years.

But soon a number of contradictions in the global order became self-evident. Consumer quasi-capitalism not only did not always lead to democracy and consensual government. Just as often, it enhanced and enriched authoritarianism.

Democracy and referenda became suspect, the moody fickleness of those who did not know what was good for them.

Nations subsidized by the United States often resented their patron. Often out of envy elites embraced anti-Americanism as a secular religion. Sometimes in the case of Europe, America was faulted either for having in the past defeated a European nation or from saving it from defeat.

The global cop, patron, market—call it what you will—was resented as not good because it was not perfect. The world's loud second greatest wish was to topple U.S. hegemony; its first quiet desire was to ensure that America—and not a Russia, China, or the Middle East—remained the global policeman.

America itself split in two. In reductionist terms, those who did well by running the global show—politicians, bureaucrats of the expanding federal administrative octopus, coastal journalists, the professionals of the high tech, finance, insurance and investment industries, entertainers, universities—all assumed that their first-world skills could not be replicated by aspiring populations in the Third World.

In contrast, those who did things that could be done more cheaply abroad—due to inexpensive labor and an absence of most government safety, environmental, and financial regulation—were replicated and soon made redundant at home: factory workers, manufacturers, miners, small retailers and farmers and anyone else whose job was predicated on muscular labor.

A Brave, New Postmodern America

Globalization became a holistic dogma, a religion based on the shared assumptions: man-made global warming required radical changes in the world economy. Racism, sexism and other pathologies were largely the exclusive wages of the West that required material and psychological reparations. Immigration from non-West to West was a global birthright. State socialism was preferable to free-market capitalism. Those whose jobs were outsourced and shipped abroad were themselves deemed culpable, given their naiveté in assuming that building a television set in Ohio or farming 100 acres in Tulare was as valuable as designing an app in Menlo Park or managing a hedge fund in Manhattan.

The logic was that anything foreigners could not do as well as Americans was sacred and proof of U.S. intelligence and savvy. Anything that foreigners could do as well as Americans was confirmation that some Americans were third-world relics in a brave new postmodern America.

Crazy things followed from the gospel of Americanized globalism. Language, as it always does in times of upheaval, changed to fit new political orthodoxies. “Free” trade now meant that Beijing could expropriate technology from American businesses in China. Under free trade, dumping was tolerable for China, but a mortal sin for America. Vast trade deficits were redefined as meaningless and the talking points of empty-headed populists. Only America believed in free and fair trade; most everyone else in mercantilism.

“Protectionism” was a pejorative for those who believed that a retaliatory United States might emulate the trade practices of those “free” traders who piled up surpluses. For example, to copy the mercantilism of a China, Germany, or Japan would be castigated as mindless protectionism.

“Nativism” did not refer to the highly restrictive and ethnically chauvinistic immigration policies of a Japan, China, or Mexico, but only to the United States, given that it occasionally pondered recalibrating open borders and requiring legality before entering the country.

“Isolationist” was a charge leveled at Americans who thought rich economies like those in Germany could afford to spend two percent of their annual GDP on defense, about half of what Americans routinely did. Not intervening in nihilist civil wars, or assuming that NATO nations needed to keep their promises, was the proof of the isolationist mind.

Failed Promises

The winners of globalization—the universities, financial powerhouses, the federal government, big tech, and the marquee media and entertainment outlets—were mostly located on the two coasts. Their dogmas became institutionalized as the gospel of higher education, the evening news, the Internet and social media.

Unfortunately, globalization otherwise did not deliver as promised. Half of the United States and Europe did not enjoy the advantages of the universal project. They found the disappearance of a good job not worth the upside of using Facebook or downloading videos. It was hard to see how someone in rural Pennsylvania or in West Virginia benefitted by knowing the most of the world’s Internet technologies were now American. It was nice having Amazon deliver goods to the front door, but one still had to have the money to pay for them. The logic of bombing Libya or fighting a 17-year-old civil war in Afghanistan was a hard sell.

The credentialed and expert had allowed North Korea to point ballistic missiles at the United States. The best and brightest forged a deal with Iran that would ensure it too would become nuclear—and then jawboned banks to violate U.S. law to allow Iran to convert its once embargoed currency into Western money.

Most of the globalized commandments turned out to be empty. A trade-cheating ascendant China did not become democratic in its affluence. Iran still hated the Great Satan, the more so, the more concessions were given to it. The Palestinian question is no more central to the Middle East peace than the Middle East is central to world peace. There is no such thing as “peak oil” for the foreseeable future.

Jeans, t-shirts, and cool did not mean that the lifestyles and mindsets of a Mark Zuckerberg or Jeff Bezos were any different from their kindred spirits of the past—J. P. Morgan, John D. Rockefeller, or Jay Gould. What we call globalization our ancestors called monopolies, trusts, and disdain for national sovereignty.

Globalization’s Cynical Laws

The entire alphabet soup of Western-inspired globalization—the EU, the United Nations, the World Bank, the WTO—did not quite end up as anticipated. Their shared creed is not the fulfillment of their originally envisioned missions, but to protect an international cadre who run them, and to ensure that any who question their missions are branded as heretics.

In sum, globalization rested on a few cynical laws: those who drafted globalized rules for others had the resources to navigate around them. Talking about abstract cosmic challenges—world peace, cooling the planet, lowering the seas—were mere ways to square the circle of being unable to solve concrete problems from war to poverty. The world’s middle classes lacked the romance of the poor and the tastes of the elites and thus were usually in the crosshairs of any global initiative. Loud progressivism was a good cloak to hide quietly cashing in. Most wished to live in a Western or Westernized country; those who could not, hated both. Degrees and credentials were substitutes for classical and traditional wisdom and knowledge... ^{*36}
